Wednesday's scheduled reboost of the station using the Zvezda Service Module engine did not occur. Neither engine fired, and the maneuver was aborted. Russian engineers are investigating. Since the reboost was primarily intended as a test of the engines and would have raised the station's altitude by approximately 1/3 of a statute mile, the planned docking of the ISS Progress 21 cargo craft is not affected. The Progress, carrying 2� tons of fuel, oxygen and supplies, will launch next Monday and dock with the station on Wednesday, April 26.

SB SAT @ AMSAT $ANS-113.04
ARISS Status - 17 April 2006

AMSAT News Service Bulletin 113.04
  From AMSAT HQ SILVER SPRING, MD.
April 23, 2006
To All RADIO AMATEURS

BID: $ANS-113.04

ARISS Status
April 17, 2006

1. ARRL Story Covers Expedition 12's Return

The ARRL article, "Expedition 12 Crew Plus One Return Safely to Earth," has been posted on the website. See:
http://www.arrl.org/news/stories/2006/04/10/100/?nc=1

2. ARRL Article on Nevada, Rio Contacts

ARRL ran a story on the Robert McQueen and Escola Americano do Rio de Janeiro school contacts entitled, "McArthur Calls it a Wrap; Brazil's Pontes Completes One QSO." See:
http://www.arrl.org/news/stories/2006/04/11/104/?nc=1

3. Elementary School Starts Radio Club

Boulder Hill Elementary School in Montgomery, Illinois has started an Amateur Radio club thanks to parent and ham volunteers. The students are learning about amateur radio and communication basics. The school is on the waiting list for an ARISS contact.

[ANS thanks Carol, KB3LKI for the above information]

/EX

In addition to regular membership, AMSAT offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT Office.

VO-52 HAMSAT
Catalog Number: 28650
Launch Date: May 05,2005

Status: Operational
Current Mode: U/V - Indian Transponder

Proposed frequencies:

Indian Transponder:
Uplink : 435.220 MHz to 435.280 MHz LSB/CW
Downlink: 145.870 MHz to 145.930 MHz USB/CW
Beacom : 145.859330 MHZ CW

Dutch Transponder:
Uplink : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacon : 145.860MHz 12WPM with CW message

Mode and Antenna Polarization:
V: LHCP

```
U: RHCP

Official Webpage: http://www.amsat.in/hamsat.htm

To know what transponder is switched on please listen for the beacon
that is
active. Each transponder has a different beacon.

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating procedures)
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz. The
order of operation is thus: (allow for Doppler as necessary)
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater
   on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10
   minute timer.

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600

Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Earlier this year there was a thread about repeaters on the moon.
This morning I was riding on my bike to work, about 19 kilometers so
plenty of time to think about all sorts of things, when it came to my
mind there are laser reflectors on the moon. Hmmm?
Laser for tx, telescope for rx. I figure there are possibilities here
for some sort of digital mode.
Has anyone ever tried this?
WHat about the strenght needed for the laser to receive the reflection
on earth?
Thoughts, comments on the possibility, anyone?

Roland.

Apollo 11 and others in the series left a "Laser Ranging Retro
Reflector" on the moon so that the distance between the earth and moon
could be measured. A high power laser was used AFIAK, with a telescope
to "capture" the returned beam.

Ah, so basically anyone can do this :)

This link has some general info and a picture of one of the reflectors on the moon.

http://sunearth.gsfc.nasa.gov/eclipse/SEhelp/ApolloLaser.html

It seems that the best way to do the EME distance via a repeater or transponder is a satellite in L4 or L5.

It was a nice thought but this one about using a laserreflector belongs
to the 98% garbage. another 97 to go before the good stuff comes. :)
It always seems that the good things come out last.

Roland.

<h1 class="box">Measuring the Moon's Distance</h1>

<h2 class="box">Apollo Laser Ranging Experiments Yield Results<br />From LPI
Bulletin, No. 72, August, 1994</h2>

<p class="quote">Scientists who analyze data from the Lunar Laser Ranging
Experiment have reported some watershed results from these long-term experiments,
begun 25 years ago when the Apollo 11 astronauts deployed a reflector array
in the Sea of Tranquillity. &quot;Using the Lunar Laser Ranging Experiment,
we have been able to improve, by orders of magnitude, measurements of the
Moon's rotation,&quot; said Jet Propulsion Laboratory team investigator
Dr. Jean Dickey. &quot;We also have strong evidence that the Moon has a
liquid core, and laser ranging has allowed us to determine with great accuracy
the rate at which the Moon is gradually receding from the Earth.&quot;</p>

<p><img src="../image/ApolloLaser.jpg" width="483" height="304" align="left" />The
first laser ranging retroreflector
was positioned on the Moon in 1969 by the Apollo 11 astronauts. By beaming
laser pulses at the reflector from Earth, scientists have been able to determine
the round-trip travel time that gives the distance between the two bodies
at any time to an accuracy of about 3 centimeters. The laser reflector consists
```

```
of 100 fused silica half-cubes, called corner cubes, mounted in a 46-centimeter
square aluminum panel. Each corner cube is 3.8 centimeters in diameter. Corner
cubes reflect a beam of light directly back toward the point of origin.</p>
<p>&quot;Lunar ranging involves sending a laser beam through
an optical telescope,&quot; Dickey said. &quot;The beam enters the telescope
where the eye piece would be, and the transmitted beam is expanded to become
the diameter of the main mirror, then bounced off the surface toward the
reflector on the Moon.&quot;</p>
<p>The reflectors are too small to be seen from Earth, so
even when the beam is precisely aligned in the telescope, actually hitting
a lunar retroreflector array is technically challenging. At the Moon's surface
the beam is roughly four miles wide. Scientists liken the task of aiming
the beam to using a rifle to hit a moving dime two miles away.</p>
<p>Once the laser beam hits a reflector, scientists at the
ranging observatories use extremely sensitive filtering and amplification
equipment to detect the return signal, which is far too weak to be seen
with the human eye. Even under good atmospheric viewing conditions, only
one photon is received every few seconds.</p>
<p>From the ranging experiments, scientists know that the
average distance between the centers of the Earth and the Moon is 385,000
kilometers with an accuracy of better than one part in 10 billion. Laser
ranging has also made possible a wealth of new information about the dynamics
and structure of the Moon. Among many new observations, scientists now believe
that the Moon may harbor a liquid core. The theory has been proposed from
data on the Moon's rate of rotation and very slight bobbing motions caused
by gravitational forces from the Sun and Earth.</p>
<p>Ranging has also determined that the length of an Earth
day has distinct small-scale variations of about one thousandth of a second
over the course of a year, caused by the atmosphere, tides, and Earth's
core. In addition, precise positions of the laser ranging observatories
on Earth are slowly drifting as the crustal plates on Earth drift. The observatory
on Maui is seen to be drifting away from the observatory in Texas.</p>
<p>Data also indicate that ocean tides on Earth have a direct
influence on the Moon's orbit. Measurements show that the Moon is receding
from Earth at a rate of about 3.8 centimeters per year. Ranging has also
improved historic knowledge of the Moon's orbit, enough to permit accurate
analyses of solar eclipses as far back as 1400 BC. Continued improvements
in range determinations and the need for monitoring the details of the Earth's
rotation will keep the lunar reflector experiments in service for years
to come.</p>

No link attitude!

http://www.n9zle.com/forum/

What is it with this no-link to other site attitude?
Years ago when the internet was in its infancy just about any site would add your site as a link from theirs. In return you would do the same. But now it has come to NO-LINKS. Not even in the forums. I have had a website located on tripod for about 9 years over those nine years I had a link to qrz dot com That site received over a million hits. And many users went from that site to qrz and on-to Icomamerica dot com. I have always supported Icom. They have never given a link on their site to mine. I have always supported qrz. But of course he(AA7BQ) never put a link on his site to mine. Well you may say that "I never asked". And that is true. But recently I have noticed he has been deleting my posts. ALL OF THEM. He never contacted me telling me why. AA7BQ just deleted them. I build CIV cables and sell a few of them every week to amateur operators who want them. When I posted one on his site. I found he deleted the post soon after it was placed there.

My beliefs are.
1. QRZ AKA AA7BQ no longer has the amateur radio attitude.
2. AA7BQ has gone fully commercial but calls his site "The Ham Radio Super Site"
3. AA7BQ does not have your best interest in mind.

I can also prove what I am writing here.
For one if he claims he is nothing but a commercial site then why does he ask for donations?
If he is not a commercial site than why will he not allow me to post my CIV cables on his site?

That takes care of number 2
Now for number 1 and 3. If some one knows the truth about something but keeps it from you he is a liar.
No mater how you put it, he is a liar. On the QRZ site Fred is there to help you renew your license. Or so he leads you to believe so. He charges you for it. Mr. Lloyd has never revealed it to any amateurs that you can renew your license or do an address change at the fcc.gov web site for FREE. Yes TOTAL

FREE at the FCC web site.
The forms at the FCC web site or no harder to fill out than his.

His CD. He charges 24.95 plus tax and shipping. On that CD is data he obtained from the FCC and got it for FREE, he sales it to you. Also he has software, created by programmers like MYSELF. And MODS that have been made available from the manufactures and other HAMS like ME! I have been contributing to Amateur Radio community for greater than 10 years, and have received very little for software I created. Never complained when it was copied. I have performed and created several of the MODS for various transceivers. Never asked a penny for it. I never commercialized HAM RADIO. And NEVER took money from some one for something they could get FREE else where.

I am sure many of you would like to ask me "what I am going to do about it?"
Here is my answer.

I have created an open forum on my web site http://www.n9zle.com/forum/

There you can post a link to your own site even if it is a commercial site.
You can post any ham radio equipment you have for sell on the site.

You can do a callsign lookup at my site from the FCC database, not that stupid qrz thing.
I will soon put together an open source database that I will sell for the price of the CD plus the true cost of shipping. About two bucks total. Once you install the database on your system, you will be able to download updates for FREE. I will make drivers available to programmers to access the database in several different languages and operating systems. I will also attempt to make the database available on the internet for FREE to download.

I only ask for a little help from other HAMS like myself. I need a few elmers that are willing to moderate some of the forums. It is easy and you will find it fun. If you have any suggestions on new forums or sections please logon to my site and make a post.

This report is organized into 4 parts.
Part 1 - operational analog amateur satellites.
Part 2 - operational digital amateur satellites.
Part 3 - non - operational satellites
Part 4 - proposed satellites

SB SAT @ AMSAT <KB9MMC $ANS-359.S1
WSR 359 Part 1 12/25/2005

AMSAT NEWS SERVICE BULLETIN 359.S1 FROM AMSAT HQ
SILVER SPRING, MD, December 25, 2005
TO ALL RADIO AMATEURS
BID: $ANS-359.S1

VO-52 HAMSAT
Catalog Number: 28650
Launch Date: May 05,2005

Status: Testing
Current Mode: U/V - Dutch Transponder

Proposed frequencies:

Indian Transponder:
Uplink : 435.220 MHz to 435.280 MHz LSB/CW
Downlink: 145.870 MHz to 145.930 MHz USB/CW
Beacom : 145.859330 MHZ CW

Dutch Transponder:
Uplink : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacon : 145.860MHz 12WPM with CW message

This from William Leijenaar, PE1RAH:
Dear AMSATs,

I wish I had the same free time now as when I designed the HAMSAT and P3e transponder. Unfortunatly these times have been changed (for the moment) due to QRL things.

However, I often try to be QRV on the HAMSAT and check the signals from my transponder and read the messages on amsat-bb. I just read about the beacon "problem". The "problem" with the beacon is actually not a problem but it is known. The beacon signal is injected at the IF, and runs throught the transponder from the IF section, up converter, via the final PA to the antenna.

The changes you hear on the beacon frequency is caused by the amplitude limiters in the IF that are activated by a too strong uplink signal. These limiters are only for protection, to avoid that the IF and VHF amplifiers get overloaded and generate all kinds of unwanted signals at the output.

My transponder is straight forward to keep it physical small and cheap in cost (as I had no sponsors). Unlike most other transponders my transponder on HAM-SAT has no AGC system. It gives always maximum gain with maximum sensitivity.

The main reason is that the AGC systems I had didn't fit in the small sized box. As an option I choose for limiters, and it worked great in tests.

Secondly, I tought limiters might be helpfull against aligators. To deal with too strong signals most transponder have an AGC to lower the RX gain, and actually be helpfull to the alligators. With the limiters their SSB signal will get distorted and they might lower their powers to have better audio quality.

The change in beacon sound is an indication for too much uplink powers and will be heared mainly in areas where higher powers are available on the uplink, like US, Europe, Japan...

Its funny to know that nobody here has discovered that the bandpass is shifted some down in frequency... There is no technical failure, the reason is known here... No panic please :o)

Please keep in mind that this transponder is my privat work and privat money. Frankly speaking this is my privat transponder I "give" to the amateur world. I was one of those many poor students, and this was the best I could do with my resources I had available at that time... The whole thing is just 16cm x 10cm x 3cm !! even smaller than the professional Indian transponder :o)

I hope you all enjoy my transponder even when it is not perfect.
[11272005]
=====
AO-51 ECHO
Catalog number: 28375
Launch date: June 29, 2004

Status: Testing
Curent Mode: PBBS - V/U 9k6
      VOICE REPEATER - V/U FM

Analog voice downlink: 435.300 MHz FM
435.150 MHz FM
Analog voice uplink: 145.880 MHZ FM
145.920 MHz FM 67Hz PL tone
1268.700 MHz FM 67Hz PL tone

Digital Downlinks: 435.150 MHz FM, 38k4 Digital, PBP, 1 watt output
2401.200 MHz FM 38k4 bps, AX.25
Digital Uplink: 145.860 MHz FM, 9k6 Digital, Pacsat Broadcast Protocol (PBP)

Broadcast: PECHO-11
BBS: PECHO-12

This from the AO-51 Command team:

The Digipeater function on AO-51 has been turned on for a "Trial Test Session". The test may be paused at any time. Please keep your digi packets down to a reasonable level as this is a shared resource. Only one uplink is in use, so the PBBS users and digi users are going to be on the same uplink frequency. This is a shared uplink and downlink with the PBBS, so do not overload it with continuous, or high duty rate, beacons or broadcasts.

This is not the 10 watt plus transmitter that is on the ISS. It will take a higher gain receiving station to hear the 9k6 signal of AO-51. You will not need a strong signal for the uplink though, as AO-51 hears very well. Note that the uplink and downlink are both at 9600 baud.

Downlink: 435.300 FM 9600 baud
Uplink: 145.860 FM 9600 baud
Digi Callsign: PACB-1

If you are using TlmEcho there is a bug in the program regarding the Digipeat Status display. That has been fixed in the new version, and a number of new features added as well. A new version of TlmEcho is expected to be released soon.

For the time being, if you monitor the 9k6 downlink you can use the LSTAT status message to verify that the digipeater is turned on. If the message contains "d:1", then the digi function is enabled. If it contains "d:0" the digi is turned off.

Mike, KE4AZN, added, "I want to personally thank Jeff, KB2M, and Gould, WA4SXM, for their help in testing the digipeat function."

[ANS thanks Mike, KE4AZN for the above information]

January 2006 Amsat Kid's Day on AO-51

Amsat-NA, the AO-51 Command Team, and the AO-51 Operations Team will sponsor Kid's Day on AO-51 on January 8, 2006. The event will run from approximately 0100 UTC 8 January until 0345 UTC 9 January. The event is open to all kids, worldwide. We ask all amateur radio stations to give this short time window to promote satellite operations with kids, by actually showing a kid how to make contacts via AO-51, providing a station to contact, or stepping aside to allow others to make contacts with the kids. During the event, please limit contacts to stations that are operating with kids at the microphone. This should allow the kids to have a nice QSO and pass some information. Kids can tell their name, age, who is helping them operate on AO-51, where they live, and other information about themselves.

AO-51 will be configured in the following mode during the event. Please note the change in the uplink frequency for the event. The PL tone will be turned off for the event.

Uplink: 145.880 mhz FM voice
Downlink: 435.300 mhz FM voice

The digital transponder on 435.150 will be turned off during the event.

See http://www.arrl.org/FandES/ead/kd-rules.html on the ARRL website for more Kids Day information.

Have fun and enjoy AO-51!

73 KE4AZN
Amsat VP-Operations
Echo Command Station

[ANS-WSR thanks Mike Kingery, KE4AZN for the above information]
[12252005]

=====

SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that SO-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz. The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer on board the spacecraft.

2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10 minute timer.

[09122004]

=====

FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

John, N4QWL reports on July 16th, 2005:
Last evening I had a AOS to LOS qso with WI2W. FO-29 came up at 01:17z here in FM07 and I found WI2W and we chatted until 01:33z. The satellite was at 2 degrees elevation when I finally heard him start to crackle a bit. What a great QSO! To think that I watched this bird launch back in 1996 and it is still working so well is a real thrill. I believe I still have the video. I might just look for it and watch it again. Boy do I love this satellite stuff! Look for you all up there.

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will automatically analyze all digital telemetry from the satellite (such as current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[ANS-WSR wishes to thanks John, N4QWL for this week's report]
[11132005]

=====

AO-27 AMRAD
Catalog number: 22825
Launched: September 26, 1993

Status: Operational

Uplink: 145.850 MHz FM
Downlink: 436.795 MHz FM

The latest information on AO-27 from control operator Michael Wyrick, N3UC (former N4USI), can be found at:

http://www.ao27.org

An AO-27 question-and-answer page is available on the AMSAT-NA web site, with updates by Ray, W2RS. The URL is:
http://www.amsat.org/amsat/intro/ao27faq.html

[ANS-WSR thanks John, K6YK, for this week's AO-27 report]
[11132005]
=====
AO-7 AMSAT OSCAR 7
Catalog number: 07530
Launch Date: November 15, 1974

Status: Semi-operational in sunlight.
Return to active status: June 21,2002

Uplink: 145.850 to 145.950 MHz CW/USB Mode A
            432.125 to 432.175 MHz CW/LSB Mode B
Downlink: 29.400 to 29.500 MHz CW/USB Mode A
            145.975 to 145.925 MHz CW/USB Mode B
Beacon: 29.502 MHz, 145.972 MHz, 435.1 MHz, 2304.1 MHz

Emily, W0EEC has created a website to allow the users of AO-7 to record contacts, observations and use of the satellite more effectively at:
http://www.emilyshouse.com/experthams/ao7/main.php
This includes the ability to log contacts.

Tim, K3TZ has written a program to decode AO-07 telemetry. The program can be downloaded at:
http://www.qsl.net/k3tz/files/K3TZ_AO-07_Telemetry_Decoder_0.5.zip

For more AO-7 info:
http://www.amsat.org/amsat/sats/n7hpr/ao7.html

INTERNATIONAL SPACE STATION (ISS) - ARISS
Catalog number: 25544
Launch date: November 20, 1998

Status: Operational
Current Mode: DIGIPEATER
Digipeater: ACTIVE

The current Expedition 12 crew is:
Commander: William McArthur - KC5ACR
Flight Engineer: Valery Tokarev - (no call)

Worldwide packet uplink: 145.990 MHz FM
Region 1 voice uplink: 145.200 MHz FM
Region 2/3 voice uplink: 144.490 MHz FM
Worldwide downlink: 145.800 MHz FM

Repeater Uplink: 437.800 MHz FM

Repeater Downlink: 145.800 MHz FM
Doppler Shift is 10 KHz

Russian callsigns: RS0ISS, RZ3DZR
USA callsign: NA1SS
Packet station mailbox callsign: RS0ISS-11
Packet station keyboard callsign: RS0ISS-3
Digipeater callsign: ARISS

The ARRL Reports;

ISS commander shooting for WAC, WAS and maybe DXCC from space

ISS Expedition 12 Commander Bill McArthur, KC5ACR, has proven to be one of the more active Amateur Radio on the International Space Station (ARISS) operators among ham radio operators who have occupied the space station. In fact, McArthur's having so much fun operating from space that he's hoping to complete Worked All Continents (WAC), Worked All States (WAS) and maybe even DXCC from space.

"Bill McArthur continues to be active on voice and now has a couple of personal goals he is trying to achieve," says ARISS Ham Radio Project Engineer Kenneth Ransom, N5VHO. "He is trying to talk to someone in every state in the United States. According to his log, he has managed to work 37 states so far." In addition, Ransom says, McArthur wants to work as many countries as he can.

"He's off to a good start with 28 DXCC entities in his log as of December 12," he said. "These contacts have been with amateur stations on every continent with the exception of Antarctica." That contact could happen this weekend, however. Although the IARU does not require WAC applicants to have worked Antarctica, Ransom says that ARISS tradition calls for an Antarctica QSO to achieve WAC from space "since the astronauts seem to have an unfair advantage."

Expedition 9 astronaut Mike Fincke, KE5AIT, became the first ISS crew member to contact all seven of the world's continents via Amateur Radio from NA1SS.

States on McArthur's most-needed list are Alaska, Hawaii, Idaho, Missouri, New Hampshire, New Mexico, North Dakota, Pennsylvania, Rhode Island, South Dakota, Vermont, Virginia and Washington.

"The list of DXCC entities is just starting to grow, so he needs a lot right now," Ransom conceded this week, adding that he hasn't included ARISS school group contacts in his counts and hopes McArthur will achieve his goals without them. "We won't know the official results for months after the mission," he added.

McArthur is about halfway through his approximately six-month duty tour aboard the ISS. He and crewmate Valery Tokarev will return to

Earth in April.

During Thanksgiving week, McArthur reportedly made some three dozen casual contacts, most of them over North America and a few over Europe and New Zealand. He made contacts with stations in the US on December 6. He also had QSOs with Australia, New Zealand and the US on December 11.

[WSR Thanks the ARRL for the above information]

The ISS Fan Club Webpage < http://www.issfanclub.com > reports that the Digipeater is active as of Nov 14th, 2005 at 0207UTC.

The ISS daily crew schedule can be found at:
http://spaceflight.nasa.gov/station/timelines/
Remember that the crew operates on UTC time. Also, all of the time line is NOT translated from Russian and posted.

This from the AO-51 Command team:

The Digipeater function on AO-51 has been turned on for a "Trial Test Session". The test may be paused at any time. Please keep your digi packets down to a reasonable level as this is a shared resource. Only one uplink is in use, so the PBBS users and digi users are going to be on the same uplink frequency. This is a shared uplink and downlink with the PBBS, so do not overload it with continuous, or high duty rate, beacons or broadcasts.

This is not the 10 watt plus transmitter that is on the ISS. It will take a higher gain receiving station to hear the 9k6 signal of AO-51. You will not need a strong signal for the uplink though, as AO-51 hears very well. Note that the uplink and downlink are both at 9600 baud.

Downlink: 435.300 FM 9600 baud
Uplink: 145.860 FM 9600 baud
Digi Callsign: PACB-1

If you are using TlmEcho there is a bug in the program regarding the Digipeat Status display. That has been fixed in the new version, and a number of new features added as well. A new version of TlmEcho is expected to be released soon.

For the time being, if you monitor the 9k6 downlink you can use the LSTAT status message to verify that the digipeater is turned on. If the message contains "d:1", then the digi function is enabled. If it contains "d:0" the digi is turned off.

Mike, KE4AZN, added, "I want to personally thank Jeff, KB2M, and Gould, WA4SXM, for their help in testing the digipeat function."

[ANS thanks Mike, KE4AZN for the above information]
January 2006 Amsat Kid's Day on AO-51

Amsat-NA, the AO-51 Command Team, and the AO-51 Operations Team will sponsor Kid's Day on AO-51 on January 8, 2006. The event will run from approximately 0100 UTC 8 January until 0345 UTC 9 January. The event is open to all kids, worldwide. We ask all amateur radio stations to give this short time window to promote satellite operations with kids, by actually showing a kid how to make contacts via AO-51, providing a station to contact, or stepping aside to allow others to make contacts with the kids. During the event, please limit contacts to stations that are operating with kids at the microphone. This should allow the kids to have a nice QSO and pass some information. Kids can tell their name, age, who is helping them operate on AO-51, where they live, and other information about themselves.

AO-51 will be configured in the following mode during the event. Please note the change in the uplink frequency for the event. The PL tone will be turned off for the event.

Uplink: 145.880 mhz FM voice
Downlink: 435.300 mhz FM voice

The digital transponder on 435.150 will be turned off during the event.

See http://www.arrl.org/FandES/ead/kd-rules.html on the ARRL website for more Kids Day information.

Have fun and enjoy AO-51!

=====
NO-44 PCSAT

Catalog number: 26931
Launch Date: September 30, 2001

Status: Operational

General Usage Uplink/Downlink:145.827 MHz 1200 Baud
Special Usage Downlink: 144.390 Mhz 1200 Baud

Bob WB4APR reports:

The PCSAT-1 digipeater on 145.825 was still going strong and working well up until December 15.

The activity page http://pcsat.aprs.org shows about 75 stations accessed PSCAT-1 between December 13 and 14. This won't last much longer since PCSAT-1 is now back to 30 minute eclipses headed towards worst-case of 35 minutes during the week of December 18-25.

Sometime before 2202z on the 15th PCSAT-1 suffered a reset to W3ADO-1 and lost its low power settings. Now at 1740z on the 17th, the US Naval Academy Satellite Lab sent the restore commands, but with 33 minute eclipses, it is doubtfull they will hold. We may have lost her until March, 2006.

The command station at the US Naval Academy should be able to keep PCSAT-1 alive indefinately as long as stations do not user her in the dark and the command stations never let her 68 hour command watch-dog timer time out.

Anyone can work PCSAT-1 with ANY typical 1200 baud packet station on 145.825. Just set your path to UNPROTO APRS via ARISS (the same that you use via ARISS on the ISS or via PCSAT2). Mobiles with the D700 or the TH-D7 HT APRS radios will see packets directly on their front panel and can work it from their mobile.

[ANS-WSR thanks Bob Bruninga, WB4APR and the US Naval Academy Satellite Lab for the above information]

PCSat is a 1200-baud APRS digipeater designed for use by stations using hand-held or mobile transceivers. Downlinks feed a central web site at: http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy under the guidance of Bob Bruninga, WB4APR.

=====

CUTE-1
Catalog number: 27844
Launched: June 30,2003

Status: Operational

Uplink: ?
Downlink: 436.8375 CW
437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ?)
Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as OPERATIONAL?
Indeed it is very operational as a CUBESAT sending CW telemetry on 436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at 14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz. Initial orbital parameters were period 101.4 min, apogee 831 km, perigee 819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

[ANS WSR wishes to thank Cliff, K7RR, for this week's information]

=====

UO-11 OSCAR-11
Catalog number: 14781
Launched: March 1, 1984

Status: Semi-operational?

Telemetry Downlink: 145.826 MHz. FM (1200-baud AFSK).
approx. 10 days ON, 10 days OFF
Mode-S Beacon: 2401.500 MHz. ... OFF
UHFBeacon: 435.025 MHz. ... OFF

During the period 21 November to 14 December 2005 the VHF beacon on 145.826 MHz has been heard from 05 to 10 December.

Signals have been very variable during this period. Sometimes received at good strength, at other times they were inaudible, even with the BFO switched ON (ie. in CW mode).

If the watchdog resets as expected, then the beacon should restart around 31 December. However, more observations are needed to confirm the timing of the watchdog timer, and whether it is being reset prematurely. Therefore, it may be worth listening for the satellite a few days before 31 December.

The on-board clock continues to show a very large error. On 09 December it was 21.8 days slow.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working.

The eclipses have now ended, and the satellite should be in continuous sunlight for the remainder of this year, and next year until early May. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures. Power supply problems can be caused by poor earth pointing attitude, ie the sunlight illuminating the ends of the satellite, instead of the solar arrays.

The watchdog timer appears to be operating on the 20 day cycle, ie. approximately ten days ON followed by 10 days OFF. It appears to be unaffected by problems of the on-board clock. However, poor solar attitude, and battery problems, may be combining to produce a low 14 volt line supply. This appears to be causing the beacon to switch OFF prematurely, and resets the watchdog timer cycle.
It seems very likely that the battery is now unable to retain its charge, due to having endured around 100,000 partial charge/discharge cycles, always a problem with NiCad cells. When analogue telemetry was transmitted, it showed an unexplained current drain from the 14 volt line. This just adds to the present problems.

The Beacon frequencies are -
VHF 145.826 MHz. AFSK FM ASCII Telemetry
UHF 435.025 MHz. OFF
S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is www.users.zetnet.co.uk/clivew/

======
POSAT-1 PO-28
Catalog Number: 22829
Launched : September 25, 1993

Status: Operational - Not open for Amatuer use

```
Downlink: 435.250 MHz
          435.275 MHz

Uplink:   145.925 MHz
          145.975 MHz
```

Broadcast callsign: POSAT1-11
BBS callsign: POSAT1-12

PO-28 (POSAT-1), Portugal's first satellite, launched 12 years ago,will be turned over to Amateur Radio use in the very near future. That was the word July 30 from AMSAT-UK Secretary Jim Heck, G3WGM, during the AMSAT-UK International Space Colloquium in Guildford, England.

Launched September 25, 1993, the satellite operated as a packet store-and-forward BBS (9600 baud FM FSK) on Amateur Radio frequencies for several weeks in early 1994. Over the years, PO-28's primary usage has been commercial, although plans have called for eventually shifting its operation to ham radio use. G3WGM reports that following lengthy negotiations it has been agreed thatthe satellite can be switched permanently to amateur frequencies. The change over is expected to take a couple of weeks.

The Portuguese satellite was built at the University of Surrey as part of a collaborative satellite technology program that involved industry and academe. Uplink frequencies will be 145.925 and 145.975 MHz. Downlink frequencies will be 435.250 and 435.275 MHz. More information on PO-28 is on the AMSAT Web site

http://www.amsat.org/amsat/sats/n7hpr/po28.html.

Uplink Frequencies: 145.925 and 145.975 MHz
Downlink Frequencies: 435.250 and 435.275 MHz

Orbit: 822 x 800 km, 98.6 deg inclined, sun-synchronous.

Transponder capabilities include FM repeater and 38k4 data. If you want to hear how loud this satellite is, listen on 429.950 until the change back to amateur radio service.

Keplerian elements for PO-28 are currently contained in the AMSAT keps bulletins and at Celestrak in amateur.txt using the name "POSAT". Users of Space Track should query the NORAD Satellite ID number 22829. The name listed by Space Track is "EYESAT A".

More information of POSAT-1 can be found at:
http://www.ee.surrey.ac.uk/SSC/CSER/UOSAT/missions/posat1.html
http://www.amsat.org/amsat/sats/n7hpr/po28.html
[ANS-WSR wishes to thank Duane Naugle, KO6BT, for this week's update.]

=====
MO-46 TIUNGSAT-1
Catalog number: 26548
Launched: September 26, 2000

Status: Operational

Uplink: 145.850 or 145.925 MHz 9600-baud FSK
Downlink: 437.325 MHz
Broadcast callsign: MYSAT3-11
BBS: MYSAT3-12

TiungSat-1 is Malaysia's first micro-satellite and in addition to commercial land and weather imaging payloads offers FM and FSK Amateur Radio communication.

TiungSat-1, named after the mynah bird of Malaysia, was developed as a collaborative effort between the Malaysian government and Surrey Satellite Technology Ltd.

=====
AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio and telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at: http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
        888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James K. Darrow, KB9MMC.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

In this edition:
* AO-51 Digipeater function enabled
* OSCAR SKN Next Weekend
* New Object Identified Near SSETI
* AMSAT Kid's Day on AO-51
* P3E to Fly Software Defined Transponder
* Eagle Fundraising Appeal
* ARISS Status - 19 December 2005

SB SAT @ AMSAT $ANS-359.01
AO-51 Digipeater function enabled

AMSAT News Service Bulletin 359.01
From AMSAT HQ SILVER SPRING, MD.
December 25, 2005
To All RADIO AMATEURS
BID: $ANS-359.01

The Digipeater function on AO-51 has been turned on for a "Trial Test Session". The test may be paused at any time. Please keep your digi packets down to a reasonable level as this is a shared resource. Only one uplink is in use, so the PBBS users and digi users are going to be on the same uplink frequency. This is a shared uplink and downlink with the PBBS, so do not overload it with continuous, or high duty rate, beacons or broadcasts.

This is not the 10 watt plus transmitter that is on the ISS. It will take a higher gain receiving station to hear the 9k6 signal of AO-51. You will not need a strong signal for the uplink though, as AO-51 hears very well. Note that the uplink and downlink are both at 9600 baud.

Downlink: 435.300 FM 9600 baud
Uplink: 145.860 FM 9600 baud

Digi Callsign: PACB-1

If you are using TlmEcho there is a bug in the program regarding the Digipeat Status display. That has been fixed in the new version, and a number of new features added as well. A new version of TlmEcho is expected to be released soon.

For the time being, if you monitor the 9k6 downlink you can use the LSTAT status message to verify that the digipeater is turned on. If the message contains "d:1", then the digi function is enabled. If it contains "d:0" the digi is turned off.

Mike, KE4AZN, added, "I want to personally thank Jeff, KB2M, and Gould, WA4SXM, for their help in testing the digipeat function."

[ANS thanks Mike, KE4AZN for the above information]

SB SAT @ AMSAT $ANS-359.02
OSCAR SKN Next Weekend

AMSAT News Service Bulletin 359.02
From AMSAT HQ SILVER SPRING, MD.
December 25, 2005
To All RADIO AMATEURS
BID: $ANS-359.02

Once again, AMSAT-NA is pleased to sponsor Straight Key Night on OSCAR for enjoyment by all radio amateurs.

OSCAR SKN 2006 will run for 24 hours, 0000-2400 UTC, on 1 January 2006. It's very simple: no rules, no scoring, and no need to send in a log. Just operate CW through any OSCAR satellite using a straight hand key, working as many other SKN participants as you can. Contacts via the moon (OSCAR Zero) count too.

As in past years, all participants are requested to nominate one of the operators they worked for "Best Fist" recognition. Your nominee need not have the best fist of those you heard, just of those you worked.

Please send all nominations to Ray Soifer via w2rs@arrl.net.

A list of those nominated will be published via the AMSAT News Service in early February, and in The AMSAT Journal.

[ANS thanks Ray, W2RS for the above information]

/EX

SB SAT @ AMSAT $ANS-359.03

New Object Identified Near SSETI

AMSAT News Service Bulletin 359.03
From AMSAT HQ SILVER SPRING, MD.
December 25, 2005
To All RADIO AMATEURS
BID: $ANS-359.03

Taft DeVere from Headquarters Airforce Space Command, (HQ AFSPC) reports that the Air Force has discovered a new object that is quite close to the SSETI payload. This new object has been cataloged as 28897. They believe that this object was ejected on 15 Dec 2005 at about 1640Z. Additional tracking data indicates that it is slowly moving away from SSETI. This leads to the conclusion that the object is not a lightweight piece of foil or Mylar type material, since these decay more quickly. It seems that this is likely an object with some mass, and radars report it is quite small.

Below is the two-line element set for the new object.

```
1 28897U 05043H   05356.70226803  .00000182  00000-0  48118-4 0    58
2 28897 098.1779 252.6230 0017791 005.4499 354.6921 14.59489332   382
```

The initial speculation is that this new object could be NCube-2 satellite although no postive reception reports have been received yet.

NCube-2's downlink is as follows:

Downlink: 437,305MHz
Bitrate: 9600b/s
Modulation technique: GMSK

The message:
"DE=LA1CUB=NCUBE2=FF=LA1CUB===" is morsed using a 2400Hz tone, 26 words per minute" where FF is a hex number [00=3,0V - FF=4,5V]

If battery voltage is above 3,8V, every 2 minutes
If battery voltage is below 3,8, every 5 minutes

In the end of the message an unnumbered AX.25 packet is attached containing
the string:
DE=LA1CUB=NCUBE2=NORWEGIAN CUBESAT - WWW.NCUBE.NO

In the header of the AX.25: Callsign: NCUBE Destination: EARTH

The satellite will transmit at a power of 1.5W at full battery charge

Reception reports will be welcome email to ncube@rocketrange.no and to missioncontrol@sseti.org

[ANS thanks Taft DeVere HQ AFSPC and Graham, G3VZV for the above information]

/EX

SB SAT @ AMSAT $ANS-359.04
AMSAT Kid's Day on AO-51

AMSAT News Service Bulletin 359.04
From AMSAT HQ SILVER SPRING, MD.
December 25, 2005
To All RADIO AMATEURS
BID: $ANS-359.04

AMSAT-NA, the AO-51 Command Team, and the AO-51 Operations Team will sponsor Kid's Day on AO-51 on January 8, 2006. The event will run from approximately 0100 utc 8 January until 0345 utc 9 January. The event is open to all kids, worldwide. We ask all amateur radio stations to give this short time window to promote satellite operations with kids, by actually showing a kid how to make contacts via AO-51, providing a station to contact, or stepping aside to allow others to make contacts with the kids.

During the event, please limit contacts to stations that are operating with kids at the microphone. This should allow the kids to have a nice QSO and pass some information. Kids can tell their name, age, who is helping them operate on AO-51, where they live, and other information about themselves.

AO-51 will be configured in the following mode during the event. Please note the change in the uplink frequency for the event. The PL tone will be turned off for the event.

Uplink: 145.880 mhz FM voice
Downlink: 435.300 mhz FM voice

The digital transponder on 435.150 will be turned off during the event.

See http://www.arrl.org/FandES/ead/kd-rules.html on the ARRL website for more Kids Day information.

Have fun and enjoy AO-51!

73 KE4AZN
Amsat VP-Operations
Echo Command Station

SB SAT @ AMSAT $ANS-359.05
P3E to Fly Software Defined Transponder

AMSAT News Service Bulletin 359.05
From AMSAT HQ SILVER SPRING, MD.
December 25, 2005
To All RADIO AMATEURS
BID: $ANS-359.05

AMSAT-DL's Board of Directors has made the decision to fly the Software Defined Transponder (SDX) on their Phase 3-Express (P3E) spacecraft. SDX features AMSAT-NA's implementation of the Software Defined Radio based on the Quadrature Sampling Detector. This decision was made at a recent BOD meeting in Marburg, Germany. SDX will utilize space that was originally planned for the Rudak Modem Module (RMU). SDX will allow Karl Meinzer's (DJ4ZC) HELAPS (High Efficiency Linear Amplification by Parametric Synthesis) ideas from his doctoral thesis to be fully implemented for the first time. With the use of the SDX processor, significantly improved linearity and efficiency in the U/V transponder can be achieved compared to the all analog implementations of HELAPS in previous Phase 3 satellites.

Placement of SDX on P3E opens an opportunity to provide an early demonstration of SDX's potential in space, including placement in an orbit that will provide flight time through the radiation belts. This "Phase 1 test" of SDX will in turn provide flight proof of concept that will benefit the later placement of SDX on AMSAT-NA's Eagle-class spacecrafts. It also provides a test platform for evaluation of SDX's weak signal processing that could prove valuable for an eventual Phase 5-A deep space mission that AMSAT-DL is evaluating. Along with improved receiver performance, SDX offers the ability to program configuration changes while in orbit and the integration of uplink and downlink bands via digital connections.

Howard Long, G6LVB of AMSAT-UK, will lead the development of SDX software for both P3E and Eagle. AMSAT-NA's Bob McGwier, N4HY and Frank Brickle, AB2KT, will conduct the integration of SDX with P3-E's HELAPS transmitters. AMSAT-NA's Lyle Johnson KK7P, and Chuck Green, N0ADI, who have served on a number of AMSAT satellite projects, will build the flight hardware.

AMSAT-DL President Peter Guelzow, DB2OS informed Bob McGwier, N4HY AMSAT-NA's VP-Engineering of the Board's decision on November 28. "This is outstanding news" notes Rick Hambly, W2GPS President of AMSAT-NA. "The opportunity to fly SDX on P3-Express will provide an early opportunity to demonstrate the potential of SDX in orbit and gives AMSAT-NA the benefit of in-orbit testing before placement on the Eagle-class satellites."

At a December meeting in Marburg, Howard, G6LVB demonstrated the functional SDX software on the target DSP processor along with a fully functional STELLA (Satellite Transponder with Equalizing Level Limiting Adapter). STELLA is designed to handle the situation where a User transmits too much power to the satellite adversely impacting the overall transponder AGC levels and thus reducing the output levels of other users on the transponder. STELLA has the ability to dynamically notch an excessive input signal to bring it into compliance with an appropriate output level versus the beacon on that band. Hambly added, "This announcement and the follow on work reinforces the close cooperation between AMSAT-NA, AMSAT-DL and AMSAT-UK as we develop the next generation of high earth orbit amateur radio satellites."

[ANS thanks Peter, DB2OS and Barry, WD4ASW for the above information]

/EX

SB SAT @ AMSAT $ANS-359.06
Eagle Fundraising Appeal

AMSAT News Service Bulletin 359.06
From AMSAT HQ SILVER SPRING, MD.
December 25, 2005
To All RADIO AMATEURS
BID: $ANS-359.06

Have YOU Responded to the Eagle Appeal?

AMSAT-NA members should have received by now an Eagle Appeal Letter from AMSAT-NA President Rick Hambly, W2GPS. The Appeal includes a letter from Rick, a color brochure on Eagle, a donation form, and return envelope. This is the first fundraising effort for Eagle as it is expected to take four years to build and launch the first satellite and three additional years for the second. AMSAT must raise at least $150,000 in 2006 to keep the project on track.

Initial response to the Appeal has been good. SpaceQuest, Ltd. of Fairfax, VA made our first corporate donation to Eagle this past week. Many thanks to Mark Kanawati, N4TPY and Dino Lorenzini, KC4YMG for the strong support! AMSAT members will recall that AO-51 was built by SpaceQuest under AMSAT-NA contract and was launched in June 2004. In addition, 12 individuals have qualified for President's Club status this week as a result of their generosity in response to the Appeal.

AMSAT-NA members who pay US income tax may take a tax deduction from their donation to AMSAT, which is recognized by the Internal Revenue Service as a 501-(c)(3) scientific organization. To qualify as a 2005 tax deduction, the donation must be post marked in 2005 or submitted in 2005. Donations made after January 1, 2006 may be applied against 2006 taxes. AMSAT will gladly accept donations via the AMSAT website using your credit card, the mailing of checks, and PayPal submissions. The AMSAT office will be closed until January 4, 2006, so making donations via telephone will not be possible until after the first of the year. In addition, individuals who may wish to donate securities can do so as well and avoid capital gains on the securities that are donated. Contact AMSAT Treasurer Gunther Meisse, W8GSM for details on how to arrange a transfer to AMSAT. Due to passage of the

Katrina Emergency Relief Act of 2005 (KETRA) by Congress, there are additional advantages in giving charitable gifts by December 31, 2005 to qualified organizations, such as AMSAT. Talk to your financial advisor about how KETRA can provide current income and estate tax advantages.

Your donation and personal support of Eagle is critical. If you haven't made your contribution, please consider making a donation.

Help AMSAT to hatch Eagle!

[ANS thanks Barry, WD4ASW for the above information]

ARISS Status - 19 December 2005

AMSAT News Service Bulletin 359.07
From AMSAT HQ SILVER SPRING, MD.
December 25, 2005
To All RADIO AMATEURS
BID: $ANS-359.07

1. California Contact Successful

On Thursday, December 15, five students from Mt. Carmel High School in San Diego, California spoke to Bill McArthur, KC5ACR. Bill answered seventeen of their questions as an audience of approximately 35 students, teachers, and others gathered for the event. The radio equipment used for this contact will remain as the school amateur radio station. The contact audio was webcast by MSNBC, and was available on the IRLP and Echolink nodes. Twenty-two Echolink connections were made from the following countries: France, Iraq, Japan, Korea, Russia, Sweden, Thailand, the U.K., and the U.S.A.

Among the media covering the event were the North County Times, Union Tribune, and Corridor News. Links to two of the stories follow:

"Mt. Carmel High students make contact with the beyond."
http://www.nctimes.com/articles/2005/12/16/news/inland/21_11_4412_15_05.txt

2. 25th Asia-Pacific Scout Jamboree

The 25th Asia-Pacific Scout Jamboree has been approved for Saturday, 31 December 2005 at 0912 UTC. The jamboree is held once every four years with scouts, ages 12-18 and will be held this year from December 28 to January 3 in Sattahip, Chonburi Province in Thailand. The hosting committee expects a turnout of 25,000 participants from the around the world, but especially from the 23 member countries in Asia-Pacific.

3. Article on Canadian School Contact

Ralph McCall School in Airdrie, Alberta, Canada experienced a successful contact with the ISS on Friday, 02 December 2005. An article has been posted to Alberta's Wild Rose Chapter 151 website, which contains photos of the event. See: http://www.qsl.net/ve6afo/iss_contact2005.html

4. Story Covers Sanderson High School Contact

Sanderson High School students spoke with Bill McArthur via amateur radio on December 8. A write up on the contact can be found on the Big Bend Amateur Radio Club website. It includes the audio and photos of the event. See:
http://www.bigbendarc.com/photos-history/photos/iss/iss_index.html

5. McArthur Continues Voice Contacts

Over the 17-18 December weekend, Bill McArthur, KC5ACR, made contacts with stations in the U.S., Mexico, the Caribbean, Thailand, Japan, Italy, and Portugal. He has already made over 200 general contacts. ARRL covered his activity on the ISS ham radio station in the article, "ISS 12 Commander Shooting for WAC, WAS and Maybe DXCC from Space." See:
http://www.arrl.org/news/stories/2005/12/15/1/?nc=1

6. Russian Special Event Planned

Russian delegate, Sergey Samburov, RV3DR, reports that a special event is being planned for December 25 to commemorate the first anniversary of the death of cosmonaut Gennady Strekalov, U6MIR. Amateur radio operators are invited to participate. It is expected that Korolev and Star City stations will operate shortwave and UHF. Two contacts with the ISS are planned for December 25 and December 26 at 20:00 UTC. On December 26-27 the ISS Ham radio will be placed in repeater mode, and cosmonauts at Energia and Star City may also participate in the activities. Two thousand anniversary QSL cards with Strekalov's portrait have been printed for the event.

7. Educational Outreach/School Selection Committee Meeting Held

The ARISS Educational Outreach/School Selection Committee meeting was held on Thursday, 08 December 2005. Items of discussion included current school contacts, and NEEIS evaluations. The next meeting is planned for 09 February 2006. The minutes have been posted to the ARISS website. See: http://www.rac.ca/ariss/arissschm.htm

[ANS thanks Carol, KB3LKI for the above information]

Dayton Hamvention=AE 2006
PO Box 964
Dayton Ohio 45401-0964
General Information (937) 276-6934
On-Line: http://www.hamvention.org

Press Release
(December 28, 2005)

Nominations Sought For 2006 Dayton Hamvention=AE Awards

The Dayton Hamvention =AE now is accepting nominations for its 2006 awards for Radio Amateur of the Year, Special Achievement, and Technical Excellence. The deadline for nominations is February 20, 2006.

All amateur radio operators are eligible. The winners will be recognized at the 2006 Hamvention =AE, which runs May 19-21.

=B7 The Radio Amateur of the Year Award goes to an individual who has made a long-term, outstanding commitment to the advancement of Amateur Radio.

=B7 The Technical Excellence Award is for the person who has made an outstanding technical advancement in the field of Amateur Radio.

=B7 The Special Achievement Award honors someone who has made an outstanding contribution to the advancement of Amateur Radio, usually someone who has spearheaded a significant project.

The Hamvention=AE Awards Committee makes the decision on all awards based in part upon the information it receives--and not on the number of nominations submitted.

Documentation that informs the Awards Committee of a candidate's accomplishments may include magazine articles, newsletters, newspaper clippings, and even videos. (Note: These materials become the property of Hamvention and will not be returned.)

Nominations are due by February 20, 2006. Additional details on these

awards and a nomination form are available on the Dayton Hamvention=AE
Web site <http://www.hamvention.org/nominate.htm>. Nominations also
are accepted via US mail to Dayton Hamvention=AE Awards, PO Box 964,
Dayton, OH 45401.

The Dayton Hamvention=AE is the world's largest gathering of amateur
radio operators. It is expected to bring more than 25,000 of the worlds
radio amateurs to the Dayton area next May.

For more information please send e-mail to: media@hamvention.org

Path loss might be a problem. What if a part in the repeater fails? (Space junk on the surface of the moon). EME is already being used as a "passive" repeater system...

assuming it got lots of use and had to use a lot of wattage I'm wondering about the batteries. It would require a big ass solar array and some big ass cells to store the power for when the sun was on the other side of the sphere.

certainly better than leaving thos ehunks in orbits as happens when
sat die

> EME is already being used as a
>"passive" repeater system...

at relitively higher power It is nice idea but the problem more that
nobody is going that way right now to hitch a ride with

It's been proposed, but there are big problems.

Getting stuff there, intact, is difficult. Reaching a lunar *impact* trajectory is easy if you're dropped off in GTO, but decelerating to a gentle landing, or even a passably rough landing, is harder. (Even penetrators, the hardest of today's hard-landers, have maximum impact velocities of hundreds of meters per second, and an undecelerated lunar impact is up in the thousands.)

Staying operational once there is even worse. A lunar night is two weeks of no sunlight and very low temperatures. I don't believe an electronics package has ever survived that without, at least, radio-isotope heaters. The Soviet Lunokhod rovers were partly nuclear-powered; the US ALSEP surface-instrument packages entirely so. Even isotope heaters are hugely expensive and full of political and bureaucratic complications. If the

lander could somehow *bury* itself, except for solar arrays and antennas,
that might work -- lunar soil is a very good thermal insulator -- but the
complexity of doing that is daunting.

Once there are astronauts there again, yeah, quite possibly. But doing
it from Earth is just plain hard.

Catalog Number: 28650

```
Launch Date: May 05,2005

Status: Testing
Current Mode: U/V - Indian Transponder

Proposed frequencies:
-------------------
Indian Transponder:
Uplink  : 435.220 MHz to 435.280 MHz LSB/CW
Downlink: 145.870 MHz to 145.930 MHz USB/CW
Beacom  : 145.859330 MHZ CW

Dutch Transponder:
Uplink  : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacon  : 145.860MHz 12WPM with CW message

Official Webpage: http://www.amsat.in/hamsat.htm

This from William Leijenaar, PE1RAH:
Dear AMSATs,

I just got a message from the India Space Research
Organisation (ISRO) that they will switch my
transponder of and switch over to the Indian
Transponder.

The switch over will be done at December 21 on 4:40
UTC time.

To know what transponder is switched on please listen
for the beacon that is active. Each transponder has a
different beacon, see below:

Indian transponder - unmodulated carrier on
145.936MHz.
Dutch Transponder  - CW message on 145.860MHz.

Many thanks for all your reports,
I hope you enjoyed my transponder in space.

Downlink: 435.150 mhz FM, 9k6 PBP Digital

This from the AO-51 Command team:

January 2006 Amsat Kid's Day on AO-51

Amsat-NA, the AO-51 Command Team, and the AO-51 Operations Team will sponsor Kid's Day on AO-51 on January 8, 2006. The event will run from approximately 0100 UTC 8 January until 0345 UTC 9 January. The event is open to all kids, worldwide. We ask all amateur radio stations to give this short time window to promote satellite operations with kids, by actually showing a kid how to make contacts via AO-51, providing a station to contact, or stepping aside to allow others to make contacts with the kids. During the event, please limit contacts to stations that are operating with kids at the microphone. This should allow the kids to have a nice QSO and pass some information. Kids can tell their name, age, who is helping them operate on AO-51, where they live, and other information about themselves.

AO-51 will be configured in the following mode during the event.
Please note the change in the uplink frequency for the event.
The PL tone will be turned off for the event.

```
Uplink:    145.880 mhz FM voice
Downlink:  435.300 mhz FM voice
```

The digital transponder on 435.150 will be turned off during the event.

See http://www.arrl.org/FandES/ead/kd-rules.html on the ARRL website for more Kids Day information.

Have fun and enjoy AO-51!

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

```
Uplink:    145.850 MHz (67.0 Hz PL tone) (See below for operating
          procedures)
Downlink:  436.795 MHz
```

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

There have been unconfirmed reports on the amsat-bb remailer that SO-50

```
has
shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of  74.4 Hz.
The
order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute
timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the
repeater
   on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset
the 10
   minute timer.

AO-10 OSCAR 10
Catalog number: 14129
Launched: June 16, 1983

Status: Non-operational

Uplink:   435.030 to 435.180 MHz CW/LSB
Downlink: 145.975 to 145.825 MHz CW/USB
Beacon:   145.810 MHz (unmodulated carrier)

AO-10 has been locked into a Mode-B, 70-cm uplink and
2-meter downlink for several years.

W4SM has more information about the satellite at the following URL:
http://www.cstone.net/~w4sm/AO-10.html
[05092004]
=====
IO-26 ITAMSAT
Catalog number: 22826
Launch Date: September 26, 1993

Status: Downlink only

Uplink:             145.875 145.900 145.925 145.950 MHz FM (1200-baud)
Downlink:           435.808 MHz PSK

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

- AMSAT News Service (ANS)
- General satellite discussion (AMSAT-BB)
- Orbit data (KEPS)
- Manned space missions (SAREX)
- District of Columbia area (AMSAT-DC)
- New England area (AMSAT-NE)
- AMSAT Educational Liaison mailing list (AMSAT-EDU)
- AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

EAGLE

AMSAT News Service Bulletin 001.01
From AMSAT HQ SILVER SPRING, MD.
January 1, 2006
To All RADIO AMATEURS
BID: $ANS-001.01

AMSAT Eagle, an HEO bird, is in need of support via funding. In order to get off the ground and become a reality, a good foundation of initial funding will be needed to begin the basic construction efforts by the "Eagle Team." Presently, all members of AMSAT have received an envelope for donations towards this effort. AMRAD and others have put out requests to all to make every effort to contribute to this satellite so do your part and spread the word to fund the project from this beginning phase through launch. Please visit the AMSAT website to donate to this Eagle appeal.

[ANS thanks Barry Baines, WD4ASW for the above information]

AMSAT Awards

AMSAT News Service Bulletin 001.03
From AMSAT HQ SILVER SPRING, MD.
January 1, 2006
To All RADIO AMATEURS
BID: $ANS-001.03

This week, congratulations go out to all of the following.

The following 51 on 51 Awards were posted in the order they were received via email and U.S. mail. I did not post #50 to the web so that no one knew when #50 would arrive giving everyone an equal chance at earning Award #51.

Bill Greene,	VE7WFG,	51 on 51 Award #50 (Dec 15)
Emily Clarke,	W0EEC,	51 on 51 Award #51 (Dec 16)
Leslie Scofield,	W4SCO,	51 on 51 Award #52 (Dec 21)
Steven Jepsen,	AI7W,	51 on 51 Award #53 (Dec 22)
Takuya Yoshihori,	JE1FQV,	51 on 51 Award #54 (Dec 24 05:38 am)
Yasuo Mikashima,	JR6LDE,	51 on 51 Award #55 (Dec 24 06:25 am)
Tim Pepper,	K8NWD,	51 on 51 Award #56 (Dec 24 10:00 am)

The AMSAT 51 on 51 Award is given to any station that makes contact with 51 different stations on AMSAT's newest satellite, AO-51, during the year 2005.

To receive the award, you must submit your log entries either electronically or by photocopy. Entries must indicate date and time (UTC) of the contact, callsign and grid square of the contacted station, and mode used. Only contacts made between 1 January, 2005 and 31 December, 2005 are eligible. Logbooks may be submitted until 30 April, 2006.

QSL cards are not required, however logbooks may be checked against other applicant's logs. The donation for the award is $10.00 (US Funds) and AMSAT members receive a $5.00 discount. Award fees may be paid through the AMSAT Online Store once you have received confirmation of eligibility from the Director of Contests and Awards.

To see all the awards visit http://www.amsat.org.

[ANS thanks Bruce, KK5DO for the above information]

AMSAT-Echo AO-51 News of the Week

Mike Kingery, KE4AZN, AMSAT Vice-President Operations, announced a new version of TlmEcho, the Telemetry Decoding Program for AO-51, is now available on his website: http://home.centurytel.net/ke4aznsatellite/echo.htm.

TlmEcho software will allow the user to view and capture telemetry that is downlinked by Echo in real time.

If you have used a previous version of TlmEcho then you can just download Version 1.1.1 and place the new files in the existing directory on your computer. This is all you need to do to upgrade to the new version.

If this is your first time using the TlmEcho program, then you need to download the full installation which is Version 1.0.5. Install this older version first and then upgrade to Version 1.1.1. Instructions are on the web page.

Also a new EchoCoef file has been placed on the site for download. This file has better high and low limits for the Tlm Channels.

The Echo Operations Team plans to enable the high power mode on AO-51 on January 4, 2006. Use 145.920 mhz FM, 67 hz PL tone for the uplink on this day. The FM downlink will be on 435.300 Mhz. Echo is planned for high power downlink operation on January 8 also in support of Kid's Day activities.

AMSAT-NA, the AO-51 Command Team, and the AO-51 Operations Team will sponsor Kid's Day on AO-51 on January 8, 2006. The event will run from approximately 0100 utc 8 January until 0345 utc 9 January. The event is open to all kids, worldwide. We ask all amateur radio stations to give this short time window to promote satellite operations with kids, by actually showing a kid how to make contacts via AO-51, providing a station to contact, or stepping aside to allow others to make contacts with the kids.

During the event, please limit contacts to stations that are operating with kids at the microphone. This should allow the kids to have a nice QSO and pass some information. Kids can tell their name, age, who is helping them operate on AO-51, where they live, and other information about themselves.

AO-51 will be configured in the following mode during the event. Please note the change in the uplink frequency for the event. The PL tone will be turned off for the event.

Uplink: 145.880 mhz FM voice
Downlink: 435.300 mhz FM voice

The digital transponder on 435.150 will be turned off during the event.

See http://www.arrl.org/FandES/ead/kd-rules.html on the ARRL website for more Kids Day information.

Have fun and enjoy AO-51!

SB SAT @ AMSAT $ANS-001.05
Visible re-entry in January

AMSAT News Service Bulletin 001.05
 From AMSAT HQ SILVER SPRING, MD.
January 1, 2006
To All RADIO AMATEURS
BID: $ANS-001.05

When the NASA probe Stardust sample return capsule nose dives back to Earth in January, it will become the fastest human-made object to streak through the atmosphere. Scientists and engineers are at the ready to observe the spectacular sky show-and savvy skywatchers can join in on the aerial action too.

If all goes to plan, Stardust will release its sample return capsule carrying comet and interstellar dust particles on Jan. 15 at 12:57 a.m. Eastern Standard Time (EST). Four hours later, the capsule will enter Earth's atmosphere, zooming toward Utah and a parachute landing at roughly 5:12 a.m. EST.

During its plummet into Utah, the heat-thwarting capsule will skyrocket across the Western United States [map].

SB SAT @ AMSAT $ANS-001.06
ARISS Status - 26 December 2005

AMSAT News Service Bulletin 001.06
From AMSAT HQ SILVER SPRING, MD.
January 1, 2006
To All RADIO AMATEURS
BID: $ANS-001.06

ARISS Status
December 26, 2005

1. Michigan Contact Successful

On Wednesday, December 21, eighteen students from Carman Park Elementary School in Flint, Michigan asked one question each of Bill McArthur, KC5ACR, via the telebridge station, WH6PN in Hawaii. An audience of approximately 300 people attended the event, with media coverage that included the Flint Journal. The contact audio was webcast, and was fed through EchoLink AMSAT (node 101 377) and EDU_Net (node 77 992) conference room servers and was broadcast into the IRLP Discovery Reflector 9010. Streaming audio was also available from the Discovery Reflector website, http://www.discoveryreflector.ca/

Forty-four connections were made to Echolink from stations in Argentina, Bangladesh, Cambodia, Canada, Iraq, Italy, Japan, Luxembourg, Slovenia, Thailand, U.K., and U.S.A., which included 15 simplex nodes and 7 repeater nodes.

The Flint Journal article, "Kids' questions zip into outer space," may be found at:
http://www.mlive.com/news/fljournal/index.ssf?/base/news-33/1135266661268160
.xml&coll=5

Photos of the Carman Park event may be found at this website:
http://www.expedition12.com/charlie/charlie.html

2. Upcoming School Contacts

The 25th Asia-Pacific Scout Jamboree contact has been approved for Saturday, December 31 at 09:12 UTC. The jamboree is held once every four years with scouts, ages 12-18 and will be held this year from December 28 to January 3 in Sattahip, Chonburi Province in Thailand. The hosting committee expects a turnout of 25,000 participants from the around the world, but especially from the 23 member countries in Asia-Pacific. There will be a live broadcast of the contact through the internet at: http://jamboree.siamportals.com . The audio will be fed to the Echolink Bangkok (node number 106 440), AMSAT (node number 101 377), and the EDU_Net node (77 992) conference room servers.

STS Escola de Aviacao Civil in Rio de Janeiro, Brazil has been scheduled for a contact with the ISS on Monday, January 2 at 15:54 UTC.

3. ARRL Article on Sanderson, Mt. Carmel Contacts

The students at Sanderson High School in Sanderson, Texas, and those at Mt. Carmel High School in San Diego, California experienced ARISS contacts on December 8 and 15, respectively. ARRL covered the contacts in the article, "Astronauts Don't Spend Much Time in Space, ISS Commander Tells Students." See:
http://www.arrl.org/news/stories/2005/12/21/100/?nc=1

4. Astronaut Training Status

Brazilian astronaut Marcos Pontes is tentatively scheduled for a training session at JSC on Monday, January 9, at which time he will be introduced to ARISS operations and school contacts. Pontes is scheduled to fly on a taxi flight to the ISS in the spring of 2006.

5. ARRL Article on McArthur Contacts

Bill McArthur, KC5ACR, continues to work stations around the world. On Saturday, December 17, Bill made a contact with Palmer Station in Antarctica, and now qualifies for the Worked All Continents award. ARRL ran an article entitled, "Weekends Best Time to Catch NA1SS on the Air." See:
http://www.arrl.org/news/stories/2005/12/23/2/?nc=1

6. Russian Special Event

Space Patrol, a Russian special event, was planned for December 25 - 26 to commemorate the first anniversary of the death of cosmonaut Gennady Strekalov, U6MIR. Cosmonauts at Energia, using the callsign R3K, and those at the Gagarin Cosmonaut Training Center (GCTC), using RK3DZB, operated HF radios on December 25, and cosmonauts are expected to operate at GCTC on December 26. Two contacts with the ISS were scheduled as part of the event - one on December 25 at 2056 UTC and another on December 26 at 1947 UTC. In addition, the Kenwood radio may be placed in cross band repeater mode from December 27 -31.

7. Japanese Magazine Runs SuitSat Article

The Japanese CQ magazine is writing an article on SuitSat which references ARISS Chairman Frank Bauer's paper, "THIS IS SUITSAT-1, AMATEUR RADIO STATION RS0RS!!" The ARISS team provided photographs to be included in the news write up, which will appear in the Japan CQ's next issue. SuitSat is expected to be deployed on February 2, 2006.

[ANS thanks Carol, KB3LKI for the above information]

Would it be possible to design a transponder to work at these low temperatures? I'm thinking of those HEMT transistors cooled to 80K used in the deep space network. Keep in the shade during the lunar day and it wouldn't see huge swings in temperature.

Roland.

Only ONE response mentioned the Apollo program..Oh well.

In fact the LAST Apollo flight was to carry a Amateur repeater to the Moon.
I believe it was to operate in the 440 Mhz range. But, alas, the flight
was cancelled.

Unfortunately, you'd have to shade it not only against the Sun, but against the warm lunar surface all around it. And the shades too get warm, although you can fight that with surface coatings and multiple layers.

That aside, it's not a bad idea. Quite aside from all the fun ways you can exploit the lower temperature, a lot of ordinary electronics apparently will work reasonably well if cooled to LN2 temperatures... *once*. It's cycling that kills it, often very quickly.

But I fear I don't see any easy way of keeping it cold during the day. Hard, complicated ways, but no easy ones.

APRSPoint 2.2 is released. New features include,

1. Added TNC data view and TNC data log,
2. Enabled auto connect for AGW packet engine,
3. Fixed a bug handling weather station data,
4. Ability to load a default map view at startup,
5. Restore TNC settings when program exits.

and many more. The holiday sale is also extended for 2 more days.
Visist http://www.aprspoint.com for details. Thanks.

I just read the ISS will be using UHF ham freqs this weekend..........

John

This weekend (Jan 14-15 UTC) Bill McArthur plans to operate on the UHF band exclusively. It is his desire to work all continents on the UHF band from the International Space Station.

The frequency he will be using will be 437.55 simplex. Due to the high Doppler effect on this band, one will need to operate split frequencies for most of the pass. A very simplified chart showing memory assignment for transmit and receive with 5 KHz spacing is below as an example .

Mem.   TX   -   RX
Ch A - 437.540 - 437.560 Acquisition of signal (AOS)
Ch B - 437.545 - 437.555
Ch C - 437.550 - 437.550 Time of closest approach (TCA)
Ch D - 437.555 - 437.545
Ch E -437.560 - 437.540 Loss of signal (LOS)

Good Luck and 73,

Kenneth G. Ransom - N5VHO
ISS Ham Radio Project Engineer

AMSAT NEWS SERVICE
ANS-008

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:

ans-editor@amsat.org

In this edition:

* AMSAT 2006 Space Symposium
* 2006 AMSAT Kid's Day on AO-51 (Rebroadcast)
* AMSAT 51 on 51 Award Time Period Expires
* SKN on OSCAR 2006 Best Fist Nominations Due
* AO-7 Activity Reports
* ARISS Status January 2, 2006
* NASA Reports Explosion on the Moon
* FREE 2006 Daily Skywatching Guide Available

AMSAT 2006 Space Symposium

AMSAT News Service Bulletin 008.01
From AMSAT HQ SILVER SPRING, MD.
January 8, 2006
To All RADIO AMATEURS
BID: $ANS-008.01

The 2006 AMSAT Space Symposium Planning Committee hosted by the Project OSCAR Amateur Radio Club is pleased to announce that the 2006 Space Symposium will be held at the Crowne Plaza San Francisco Mid-Peninsula hotel in Foster City, California. The dates of the Symposium and surrounding activities will begin on the 5th of October and run through the 11th of October, 2006. Why so long? This year's Symposium will be include the AMSAT Board meeting, AMSAT General Membership Meeting, the ARISS International Delegates Meeting, a meeting of the IARU Satellite Advisors Committee and AMSAT International Delegates. It's going to be a busy weekend!

"We are very excited to host the Symposium here in the San Francisco Bay Area" says Project OSCAR VP Emily Clarke who is also co-chair for the planning committee. "We are especially pleased to chose the Crowne Plaza as it fills more qualifications based on what the membership indicated was important in our recent survey. It is spacious, has affordable food services, excellent rooms and free shuttles to shopping and commuter rail service. Even more important, according to the survey, there is free high speed internet in the rooms, meeting spaces, dining spaces and even the swimming pool! We also invite AMSAT Symposium attendees to stay for Pacificon, the ARRL Pacific Division Convention which will be held the following weekend."

The AMSAT web team has posted informational pages on the AMSAT web site.
You can find the announcement with many links at:
http://www.amsat-org/amsat-new/symposium

Future announcements including the Call For Papers, Online Registration and Online Hotel Registration will be available approximately 1 April 2006.

[ANS thanks Emily, W0EEC and the 2006 AMSAT Symposium Committee for the above information]

2006 AMSAT Kid's Day on AO-51 (Rebroadcast)

AMSAT News Service Bulletin 008.02
From AMSAT HQ SILVER SPRING, MD.
January 8, 2006
To All RADIO AMATEURS
BID: $ANS-008.02

AMSAT-NA, the AO-51 Command Team, and the AO-51 Operations Team will sponsor

Kid's Day on AO-51 on January 8, 2006. The event will run from approximately 0100 UTC 8 January until 0345 UTC 9 January. The event is open to all kids, worldwide. We ask all amateur radio stations to give this short time window to promote satellite operations with kids, by actually showing a kid how to make contacts via AO-51, providing a station to contact, or stepping aside to allow others to make contacts with the kids.

During the event, please limit contacts to stations that are operating with kids at the microphone. This should allow the kids to have a nice QSO and pass some information. Kids can tell their name, age, who is helping them operate on AO-51, where they live, and other information about themselves.

AO-51 will be configured in the following mode during the event. Please note the change in the uplink frequency for the event. The PL tone will be turned off for the event.

Uplink: 145.880 MHz FM voice
Downlink: 435.300 MHz FM voice

The digital transponder on 435.150 will be turned off during the event.

See http://www.arrl.org/FandES/ead/kd-rules.html on the ARRL web site for more Kids Day information.

Have fun and enjoy AO-51!

[ANS thanks Mike, KE4AZN for the above information]

AMSAT 51 on 51 Award Time Period Expires

AMSAT News Service Bulletin 008.03
From AMSAT HQ SILVER SPRING, MD.
January 8, 2006
To All RADIO AMATEURS
BID: $ANS-008.03

The AMSAT 51 on 51 Award time period for operating is now over. It ended December 31, 2005. You still have until April 30, 2006 to submit for this award if you have earned it.

This week, congrats go out to all of the following.

Laurent Ferracci, F1JKJ, Satellite Communications Achievement Award #427

Steven Holly,   WI2W,   51 on 51 Award #57
Alan Rothermich, WB0QLU, 51 on 51 Award #58
Marc Sanchez,   KD5MSS, 51 on 51 Award #59
Patrick Stoddard, WD9EWK, 51 on 51 Award #60

To see all the awards visit http://www.amsat.org.

[ANS thanks Bruce Paige, KK5DO, AMSAT Director Contests and Awards for the above information]

SKN on OSCAR 2006 Best Fist Nominations Due

AMSAT News Service Bulletin 008.04
From AMSAT HQ SILVER SPRING, MD.
January 8, 2006
To All RADIO AMATEURS
BID: $ANS-008.04

Ray Soifer, W2RS passes along the following request regarding Straight Key Night on OSCAR 2006:

"Many thanks to all who participated in Straight Key Night on OSCAR 2006."

"Please remember to nominate someone you worked for 'Best Fist.' Your nominee need not have the best fist of those you heard, just of those you worked. Nominations should be sent to w2rs@arrl.net. A list of those nominated will be published in ANS in early February, and in a forthcoming issue of The AMSAT Journal."

[ANS thanks Ray, W2RS for the above information]

AO-7 Activity Reports

AMSAT News Service Bulletin 008.05
From AMSAT HQ SILVER SPRING, MD.
January 8, 2006
To All RADIO AMATEURS
BID: $ANS-008.05

The AMSAT-bb has been active this week with reports of AO-7 activity. Emily Clarke, W0EEC filed the following report:

"There were some excellent reports on the AO-7 log by VE9QRP and W8IJ this evening (04 Jan after 0000). Sweet. Unfortunately, I worked the 04:40 pass on the west coast and there was nada except someone who appeared to tune up and gave up."

"I'm curious enough to mention that AO-7 is only operable when in full sunlight. This doesn't meant that it is operable when Nova says "Visible." Visible means that it is "Sunlit" but not that it is in full sunlight. So wait about 30 more seconds (or so) for it to get fully illuminated."

"Not all tracking programs will tell you when it is illuminated by the sun.

If not, look at the footprint and see if there is a clear delineation between the footprint and the sunlight portion of the earth beyond the gray line. That is when it will be fully illuminated (thanks to Drew KO4MA for that hint.)"

"I've recently added some real-time graphs to track the mode shifts and also a scorecard for AO-7 operators. You don't have to make the entry yourself, but someone you have had a QSO with does. Kudos to K3SZH for being the most frequently heard or listening ham on AO-7."

Emily states that if you do work AO-7, you are encouraged to log your contacts at:
http://www.emilyshouse.com/experthams/ao7/

--

JAMSAT member Mineo Wakita, JE9PEL caught an AO-7 telemetry cycle on 5 January 2006. Mineo reported that the telemetry cycle was approximately 80 seconds long and that he has recorded it to an MP3 file.

You can hear Mineo's MP3 file at the following URL:
http://www.ne.jp/asahi/hamradio/je9pel/60105a07.mp3

The following data was also provided:

ARISS Status January 2, 2006

AMSAT News Service Bulletin 008.06
From AMSAT HQ SILVER SPRING, MD.
January 8, 2006
To All RADIO AMATEURS
BID: $ANS-008.06

1. Asia-Pacific Scout Jamboree Contact Successful

On Saturday, December 31, ten scouts attending the 25th Asia-Pacific Scout Jamboree contacted the ISS, and spoke to Bill McArthur, KC5ACR. The children were able to ask and have answered 14 questions, as an audience of 100 people looked on. Three newspapers, 3 television stations, and one radio station covered the event. The audio was fed to the Echolink Bangkok, AMSAT and EDU_Net conference room servers. Sixty-four connections were made from the following ten countries, which included 33 simplex and 5 repeater nodes: Australia, Canada, France, Germany, India, Japan, Luxembourg, Thailand, U.K., U.S.A.

2. Upcoming School Contacts

Peterson Elementary School in Red Springs, North Carolina (a crew pick) has been scheduled for an ARISS contact via the telebridge station, VK5ZAI in Australia. The students will speak with Bill McArthur, KC5ACR, on Monday, January 9, 2006 at 16:39 UTC.

St. Albert the Great School in North Royalton, Ohio has been approved for an ARISS contact on Wednesday, January 11 at 18:11 UTC.

3. McArthur Active on Voice

Bill McArthur, KC5ACR, was active on voice over the holiday week, and continues to work stations around the world. Stations in Japan and Europe reported having contacts with the astronaut this past week.

4. Russian Special Event

The Russian special event, Space Patrol, was held December 25 - 26 to commemorate the first anniversary of the death of cosmonaut Gennady Strekalov, U6MIR. Cosmonauts at Energia and the Gagarin Cosmonaut Training Center (GCTC) participated, using HF radios. Two contacts were made with the ISS as part of the event. The Kenwood radio was then placed in repeater mode for a few days. Stations reported having made contacts with the cosmonauts on the ground, and heard Valery Tokarev making contacts from the ISS.

NASA Reports Explosion on the Moon

AMSAT News Service Bulletin 008.07
From AMSAT HQ SILVER SPRING, MD.

January 8, 2006
To All RADIO AMATEURS
BID: $ANS-008.07

NASA scientists have observed an explosion on the moon. The blast, equal in energy to about 70 kg of TNT, occurred near the edge of Mare Imbrium (the Sea of Rains) on 7 November 2005, when a 12-centimeter-wide meteoroid slammed into the ground traveling 27 km/s.

"What a surprise," says Marshall Space Flight Center (MSFC) researcher Rob Suggs, who recorded the impact's flash. He and colleague Wes Swift were testing a new telescope and video camera they assembled to monitor the moon for meteor strikes. On their first night out, "we caught one," says Suggs.

FREE 2006 Daily Skywatching Guide Available

AMSAT News Service Bulletin 008.08
From AMSAT HQ SILVER SPRING, MD.
January 8, 2006
To All RADIO AMATEURS
BID: $ANS-008.08

Here is a FREE 407-page downloadable book containing What's Up skywatching material from UniverseToday.com for every day in 2006. You can download the book to your local computer, go to the day you like and print off the page to take outside with you nicely formatted.

It's also got tons of other material including general skywatching advice, equipment selection, and hundreds of beautiful photographs.

It's an Adobe Acrobat PDF file, so you'll need to download the Adobe Acrobat reader if you don't have it already.

And yes, this book is absolutely free.

More information can be found at the UniverseToday.com web site:
http://www.universetoday.com/am/publish/whatsup_2006_book.html

[01082006]
=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating
procedures)

Downlink: 436.795 MHz

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

There have been unconfirmed reports on the amsat-bb remailer that SO-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz. The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater
   on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10
   minute timer.

NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Operational
```

```
General Usage Uplink/Downlink:145.827 MHz 1200 Baud
Special Usage Downlink:       144.390 Mhz 1200 Baud

PCSAT APRS page: http://pcsat.aprs.org

Anyone can work PCSAT-1 with ANY typical 1200 baud packet
station on 145.825.  Just set your path to UNPROTO APRS via
ARISS (the same that you use via ARISS on the ISS or via PCSAT2).
Mobiles with the D700 or the TH-D7 HT APRS radios will see packets
directly on their front panel and can work it from their mobile.

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
        888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

- AMSAT News Service (ANS)
- General satellite discussion (AMSAT-BB)
- Orbit data (KEPS)
- Manned space missions (SAREX)
- District of Columbia area (AMSAT-DC)

* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:

AMSAT NEWS SERVICE
ANS-015

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:
ans-editor@amsat.org

In this edition:

* Reminder - AMSAT Space Syposium Dates October 5-11, 2006
* ISS Amateur Radio Update
* ARISS Status for the Week of January 9, 2006
* One Last Reminder - SKN on OSCAR 2006 Best Fist Nominations Due
* Ham Radio Pioneered Invention Available to the Public

SB SAT @ AMSAT $ANS-015.01
Reminder - AMSAT Space Syposium Dates October 5-11, 2006

AMSAT News Service Bulletin 015.01
From AMSAT HQ SILVER SPRING, MD.
January 15, 2006
To All RADIO AMATEURS
BID: $ANS-015.01

The 2006 AMSAT Space Symposium Planning Committee hosted by the Project OSCAR Amateur Radio Club is pleased to announce that the 2006 Space Symposium will be held at the Crowne Plaza San Francisco Mid-Peninsula hotel in Foster City, California. The dates of the Symposium and surrounding activities will begin on the 5th of October and run through the 11th of October, 2006.

This year's Symposium will be include the AMSAT Board meeting, AMSAT General Membership Meeting, the ARISS International Delegates Meeting, a meeting of the IARU Satellite Advisors Committee and AMSAT International Delegates. It's going to be a busy weekend!

The AMSAT web team has posted informational pages on the AMSAT web site. You can find the announcement with many links at:
http://www.amsat-org/amsat-new/symposium

Future announcements including the Call For Papers, Online Registration and Online Hotel Registration will be available approximately 1 April 2006.

[ANS thanks Emily, W0EEC and the 2006 AMSAT Symposium Committee for the above information]

SB SAT @ AMSAT $ANS-015.02
ISS Amateur Radio Update

AMSAT News Service Bulletin 015.02
From AMSAT HQ SILVER SPRING, MD.
January 15, 2006
To All RADIO AMATEURS
BID: $ANS-015.02

Kenneth Ransom, N5VHO, who is the ISS Ham Radio Project Engineer at the Johnson Space Center in Houston, provided several updates to the recent ham band activity from the ISS.

Radio amateurs around the world have been enjoying how active Astronaut Bill McArthur has been during these recent weeks. The ISS has been in favorable pass times for the continental US right after the end of the crew work day. Bill has already been heard on a few of the passes around 1930-2200 UTC. He is often active on Saturday and Sunday at various times from 0800-2200 UTC.

Bill has worked 49 states from orbit. The sole state remaining is Alaska which will be in more favorable orbits starting around Jan 20. Current orbits for them are during the normal crew sleep time.

Bill has also worked operators on all continents including Antarctica using VHF. As of Jan. 9 Bill had 63 DXCC entities with the following breakdown by continent:

5 Total worked in S. America
4 Total worked in Oceania
9 Total worked in N. America
29 Total worked in Europe
11 Total worked in Asia
1 Total worked in Antarctica
4 Total worked in Africa

Henk, PA3GUO, has a web page with photographs and an audio recording of both ends of his contact with ISS. See: http://www.qsl.net/pa3guo.

Mak, SV1BSX reports hearing Bill work the following prefixes:
DL, EA, F, HA, I, IS0, G, OE, OK, ON, PA, SM, SP, SV, TA, UA, YU, HZ, and 9K. Mak says that these Greek stations have had the opportunity to have a contact with Bill: SV1BSX, SV1LK, SV8CS.

During the weekend of Jan 14-15 UTC Bill McArthur plans to operate on the UHF band exclusively. It is his desire to work all continents on the UHF band from the International Space Station.

The frequency he will be using will be 437.55 simplex. Due to the high Doppler effect on this band, one will need to operate split frequencies for most of the pass. A very simplified chart showing memory assignment for transmit and receive with 5 KHz spacing is below as an example.

Mem. TX - RX
Ch A - 437.540 - 437.560 Acquisition of signal (AOS)
Ch B - 437.545 - 437.555
Ch C - 437.550 - 437.550 Time of closest approach (TCA)
Ch D - 437.555 - 437.545
Ch E -437.560 - 437.540 Loss of signal (LOS)

Bill's contact log now exceeds 700 but that includes several repeat stations. Please give others a chance if you are in a highly populated footprint. As a reminder, these simple operating practices will increase every ones chances:

1. Wait for ISS Crew to call CQ or QRZ.
2. Send only your call sign phonetically and wait for crew to acknowledge your specific call sign.
3. Listen closely for the call of the station ISS is talking with.
4. If you do not hear your specific call sign, do not transmit again. until you hear the ISS crew member say CQ or QRZ.
5. Please be courteous.

Hams in North America will also enjoy visual sighting opportunities of the International Space Station when it will be flying over the United States this month during evening hours when it is easy to see. Use your tracking program or you can find the visual sighting times for your QTH from the Heavens Above web page: http://www.heavens-above.com

The following links should prove useful to anyone not familiar with ISS operations:

SB SAT @ AMSAT $ANS-015.03
ARISS Status for the Week of January 9, 2006

AMSAT News Service Bulletin 015.03
From AMSAT HQ SILVER SPRING, MD.
January 15, 2006
To All RADIO AMATEURS
BID: $ANS-015.03

1. Brazilian Contact Successful

On Monday, January 2, students from the STS Escola de Aviacao Civil in Rio de Janeiro, Brazil experienced a successful contact with the ISS. Bill McArthur, KC5ACR, answered 17 questions posed to him by seventeen students, as an audience of 60 gathered around the radio. A Rio de Janeiro technical magazine, Antena Eletronica Popular, covered the event. The audio was retransmitted on HF (7080 Mhz) and Echolink. STS is a civil aviation school which offers airplane and helicopter instruction to students, ages 18-25, and gives refresher courses to pilots, ages 25-45.

2. ARISS School Contacts

Peterson Elementary School in Red Springs, North Carolina had ARISS contact via the telebridge station, VK5ZAI in Australia on Monday, January 9, 2006.

St. Albert the Great School in North Royalton, Ohio had an ARISS contact on Wednesday, January 11, 2006.

Itaki Elementary School Father's Club in Higashihiroshima, Hiroshima, Japan, is scheduled for an ARISS contact on Thursday, January 19, 2006.

The Georgia Institute of Technology, School of Aerospace Engineering in Atlanta, Georgia (crew pick) is scheduled for an ARISS contact on Thursday, January 19 at 15:05 UTC.

3. NASA Education Covers Upcoming SuitSat Event

SuitSat, a Russian spacesuit containing ham radio equipment with recorded voice messages and a CD of student artwork, is scheduled to be deployed during a Russian EVA between February 2-9, 2006.

NASA Education has posted two versions of a SuitSat article entitled, "Hearing Voices from Space," on its website. The first version covers grades K-8, and the second, grades 9-12 & postsecondary. The articles are available at the NASA Education page: http://education.nasa.gov/home/index.html and once there follow the links "For Students" or "For Educators".

4. Astronaut Training Status

The Brazilian Space Agency is working with astronaut Marcos Pontes to obtain an amateur radio license and callsign for him, so that he may participate in an ARISS contact during his spring 2006 taxi flight. A training session at JSC has also been scheduled to familiarize Pontes with ARISS school operations.

[ANS thanks Carol, KB3LKI for the above information]

Ham Radio Pioneered Invention Available to the Public

AMSAT News Service Bulletin 015.05
From AMSAT HQ SILVER SPRING, MD.
January 15, 2006
To All RADIO AMATEURS
BID: $ANS-015.05

Talking pants, a ham radio inspired invention by those of us who carry our HT in a pocket or on a belt, will become available to the general public.

Jeans giant Levi's is hoping to woo fashionistas and music aficionados alike with its new iPod-compatible RedWire DLX jeans, due out this fall.

With a joystick remote control built into the watch pocket, the new jeans will allow wearers to play, pause, track forward or back and adjust the volume on their iPods without having to take them out of their pockets.

A separate pocket will house and conceal the bulge of the iPod, while a built-in retractable headphone unit is designed to prevent tangled wires.

A red conductive ribbon will keep wearers connected while allowing them to remove the iPod from their pockets to view the screen, the company said. Users will need to remember to empty their pockets before doing the laundry.

If you'd like to read more about it, see:
http://www.spacedaily.com/2006/060111153858.q5blomhb.html

[ANS thanks SpaceDaily.com for the above information]

I used the NOAA (137MHz) version to receive MIR with great results,
the eggbeater really catches those low horizon sats and I suppose ISS is in
a similar orbit.

Astronaut Bill McArthur Scores WAC on UHF and WAS on VHF

AMSAT News Service Bulletin 022.01
From AMSAT HQ SILVER SPRING, MD.
January 22, 2006
To All RADIO AMATEURS
BID: $ANS-022.01

Last weekend, January 14-15 UTC, Astronaut Bill McArthur aboard the International Space Station operated on the UHF band exclusively. A report received from Keith, ZS6TW in South Africa indicates that Bill has completed a sweep of Working All Continents on UHF.

Keith wrote on the ISS Fan Club site, http://www.issfanclub.com, "Bill was active on UHF voice over RSA on the January 14, 20:00 UTC pass. Bill contacted me followed by Greald, ZS6BTD in Johannesburg. He said that our contacts had just completed his worked all continents. It was a pleasure speaking to him again. 73's Keith, ZS6TW."

The UHF frequency NA1SS is 437.55 MHz simplex when this mode is active.

This is the first time an ISS crew member has worked all 7 continents on the 430 MHz band. McArthur had previously worked all continents on 145 MHz to be the second ISS crew member to complete that feat. Mike Fincke worked all 7 during his tour as Science Officer on Expedition 9.

Be sure to send in your QSL cards so Bill can claim his award. Refer to the ARISS QSL page for information on how to QSL:
http://www.rac.ca/ariss/oindex.htm#QSL's

On January 21, Ed, KL7UW; Dale, KL7XJ; and Kevin, KL0RG worked NA1SS on pass #41012 so Bill has now completed WAS from space on the 2 meter band.

Congratulations Bill and thank you for all the time you give to talk on the radio!

[ANS thanks Kenneth, N5VHO for the above information]

SB SAT @ AMSAT $ANS-022.02
AO-7 Enters Period of No Eclipse

AMSAT News Service Bulletin 022.02
From AMSAT HQ SILVER SPRING, MD.
January 22, 2006
To All RADIO AMATEURS
BID: $ANS-022.02

AO-7 has entered into a period where it does not go into eclipse. The orbit is precessing and at this time of the year it is at (and over) the grey line on the western edge. Contrary to previous years, AO-7's orbit has precessed to the point where it does not go into an eclipse. This is the first time since it "awoke" that this has happened.

Emily Clarke, W0EEC has published some charts on the AO-7 log website that illustrate the progression over the past few years that include a chart of AO-7s eclipse durations and the latitude of when eclipse happens. You can see them at:

http://www.emilyshouse.com/experthams/ao7/Eclipse.php

Although not drawing any conclusions about mode of operation Emily states that this is going to be an interesting period, "Since AO-7 will operate in full sun without any power loss it will be interesting to see if and when it's mode changes". Comments to her directly are invited at her email via AMSAT.ORG.

Emily also wants to thank all those who have been loyal contributors to the website and indicates that the increased logging on the AO-7 log is helping to enhance the ability to collect data.

"It has been very helpful to collect information about this intrepid satellite, and hopefully the data will help enhance future designs. AO-7 is breaking the mold, and the more data we can collect the better we can improve our understanding of the space environment"

AO-7 was launched in 1974 and was a multi-national project between the US, Canada, Germany and Australia. It is the oldest operational amateur satelllite.

[ANS thanks Emily, W0EEC for the above information]

SB SAT @ AMSAT $ANS-022.03
AO-7 Control Electronics Still Functioning After 30+ Years in Space

AMSAT News Service Bulletin 022.03
From AMSAT HQ SILVER SPRING, MD.
January 22, 2006
To All RADIO AMATEURS
BID: $ANS-022.03

With the AO-7 satellite experiencing sunlit conditions for the next several weeks radio amateurs have had an opportunity to determine additional functionality of this 30+ year old satellite. With its batteries long dead, AO-7 is only operational when its solar cells are adequately illuminated by sunlight.

John, LA2QAA noted, "After checking the log on 'The AO-7 Resource Page', I estimated the switchover between modes on AO-7 to be at approximately 08:30 UTC daily. However, on the 17th of January, I noticed the changeover happened at precisely 08:57 in the middle of a Mode-B QSO with UA9CP. I immediately switched to mode-A and carried on the QSO therby confirming the time of the mode change on that particular day. This shows that the 24 hour timer is functioning as it was designed to do 31 years ago!"

One of the AO-7 pioneers, Jan W3GEY brings us up to speed on AO-7's internal timer, "If telemetry channel 2C seems to increment about every 15 minutes then the clock is still working."

Mike, N1JEZ, AO-7 Control Operator, suggests, "So what we really want to do is monitor the telemetry and see if Channel 2C is really incrementing and that the switch occurs near 95 in the cycle. One other thing I'd like to try is to command the satellite to reset the timer. This should be fun!"

Stay tuned as more is learned of the oldest operational amateur satellite in orbit.

For more information refer to The AO-7 Resource Page at:
http://www.planetemily.com/ao7/

[ANS thanks John, LA2QAA, Jan, W3GEY and Mike, N1JEZ for the above information]

Satellite DX is Still Happening

AMSAT News Service Bulletin 022.04
From AMSAT HQ SILVER SPRING, MD.
January 22, 2006
To All RADIO AMATEURS
BID: $ANS-022.04

In this period prior to the launch of the next high earth orbit amateur radio satellites reports of satellite DX show that there are still exciting opportunities for long-range contacts. Timing and location are key factors.

AO-7, in a polar orbit approximately 900 miles above the earth has provided some DX. Ron, K8DID in Michigan reports that he worked Victor, YL2LW in Latvia on AO-7 in Mode B this past week. The land distance between these stations is 7316 km.

Drew, KO4MA in Florida has had a past AO-7 contact with Andre, PH7AT in the Netherlands. The land distance between these stations is 7511 km.

Andre, PH7AT says a prior AO-7 contact with Randy, WB4LHD in Tennessee is at a distance 7408 km.

Get Ready For SuitSat

AMSAT News Service Bulletin 022.07
From AMSAT HQ SILVER SPRING, MD.
January 22, 2006
To All RADIO AMATEURS
BID: $ANS-022.07

Miles, WF1F sends the following International Space Station ARISS SuitSat Project Status Report.

ARISS to activate a new hand launched educational satellite project from the International Space station. The new educational experiment is called SuitSat. The SuitSat project is onboard the International Space Station and is being prepared for activation very soon. The SuitSat project has a tentative activation date of February 3, 2006. The SuitSat activation will take place during the ISS crew space walk. SuitSat will be a hand launched by the ISS crew during their early February SpaceWalk.

Since we have determined that the batteries in SuitSast may last only a few days, it is suggested that radio amateurs prepare now to receive the first transmissions so as not to miss out on this Historical event!
The current expected life of the SuitSat project is approximately 2 to 6 days. If you delay in setting up your station you may miss out on this educational experiment.

What is SuitSat:
In short, the crew will toss an Old spacesuit out the airlock and let it fly away as its own satellite. The Space Station crew have attached an Amateur Radio beacon transmitter to the spacesuit. The SuitSat project will broadcast telemetry and voice messages to earth for as long as the batteries last. There are no solar cells on this satellite.

Anyone with a simple FM receiver or VHF police scanner should be able to hear the signals from SuitSat on 145.99 MHz as it orbits around the earth 15 times a day.

Voice Telemetry:
The SuitSat project will be transmitting on 145.990 MHz FM and will consist of Voice Telemetry, giving Mission Time, Suit Temperature and Battery Voltage, Voice Greeting messages in multiple languages, and an SSTV image using Robot 36 format. This entire transmission cycle will repeat every 9 minutes until the batteries discharge.

SuitSat Transmitter:
The SuitSat transmitter is a Kenwood TH-K2, a small hand held radio, which will transmit a 1 watt FM signal from SuitSat on 145.990 MHz FM Downlink only. There is no uplink for this satellite.

The ARISS team is also planning on using the Kenwood D700 transceiver aboard the ISS to rebroadcast the SuitSat signal on 437.800 MHz FM. This will allow you to hear SuitSat while ISS is in range of your station.

For more specific details on the SuitSat project, please review the AMSAT and related links below.

NASA Prepares For February 3 Spacewalk

AMSAT News Service Bulletin 022.08
From AMSAT HQ SILVER SPRING, MD.
January 22, 2006
To All RADIO AMATEURS
BID: $ANS-022.08

NASA is hosting a preview session about the next spacewalk by the International Space Station Expedition 12 crew at 2 p.m. EST, Friday, January 27 from NASA's Johnson Space Center, Houston. The event airs live on NASA TV with questions from media at participating agency locations.

The spacewalk by station Commander Bill McArthur and Flight Engineer Valery Tokarev is Feb. 3. It airs live on NASA TV with coverage starting at 4:30 p.m. EST. The six-hour spacewalk starts at 5:20 p.m. EST. (SuitSat is likely to be released during this spacewalk.)

For digital downlink information and access to NASA TV's Public Channel on the Web in RealPlayer, RealAudio, or Windows Media Player, visit:

OSCARLocator Photo Gallery Invites Contributions

AMSAT News Service Bulletin 022.09
From AMSAT HQ SILVER SPRING, MD.
January 22, 2006
To All RADIO AMATEURS
BID: $ANS-022.09

Emily, W0EEC has set up a temporary photo gallery for people to upload photos of their OSCARLocators and other early satellite tracking systems.

The gallery is located at:
http://www.emilyshouse.com/gallery/OSCARLocators

A few tips and rules:

1) To upload photos you must login (not required to view the gallery). The login is OSCAR (all upper case) and the password is seven (all lower case).

2) Before uploading photos it's a good idea to resize them to 800 x 600. This will make sure that the upload time (2min) isn't exceeded.

3) After uploading, edit the caption. Please include your name and description.

New photos are added to the end of the gallery so you might have to page back to find your upload.

This is self-policing, so if you find any uploads that are inappropriate please let me know via email (w0eec@amsat.org) so I can remedy the situation.

/EX

In addition to regular membership, AMSAT offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT Office.

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating procedures)
Downlink: 436.795 MHz

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

There have been unconfirmed reports on the amsat-bb remailer that SO-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz. The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10 minute timer.

=====
AO-7 AMSAT OSCAR 7
Catalog number: 07530
Launch Date: November 15, 1974

Status: Operational until March 14th

Uplink:     145.850 to 145.950 MHz CW/USB Mode A
            432.125 to 432.175 MHz CW/LSB Mode B
Downlink:    29.400 to  29.500 MHz CW/USB Mode A (1W PEP)
            145.975 to 145.925 MHz CW/USB Mode B (8W PEP)
            145.975 to 145.925 MHz CW/USB Mode C (2W PEP)
Beacons:     29.502 MHz
            145.972 MHz
            435.100 MHz
           2304.100 MHz

AO-7's orbit no longer goes into eclipse, so it is operating on a 24 hour
timer that changes the mode schedule at approximately 0900z each day.  The
timer alternates the satellite's operational mode between Mode A and Mode B.

Please use QRP when operating on AO-7!  There are no batteries, and
excessive
```

power may cause unexpected behavior and possibly damage the satellite. Mode B users are likely to experience a Mode change from Mode B to Mode C if the buss voltage drops. This will be marked by a decrease in signal strength from AO-7 due to the lower power of Mode C.

AO-7 is expected to remain on this schedule until approximately 14 March 2006 at which time it will re-enter a period of eclipse on each orbit.

=====
NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Operational

General Usage Uplink/Downlink:145.827 MHz 1200 Baud
Special Usage Downlink:       144.390 Mhz 1200 Baud

PCSAT APRS page: http://pcsat.aprs.org

Anyone can work PCSAT-1 with ANY typical 1200 baud packet
station on 145.825.  Just set your path to UNPROTO APRS via
ARISS (the same that you use via ARISS on the ISS or via PCSAT2).
Mobiles with the D700 or the TH-D7 HT APRS radios will see packets
directly on their front panel and can work it from their mobile.

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the
memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen,
G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:

Hi,

One of the strangest satellites in the history of the space age is about to
go into orbit. Launch date: Feb. 3rd. That's when astronauts onboard the
International Space Station (ISS) will hurl an empty spacesuit overboard.
The spacesuit is the satellite -- "SuitSat" for short, and could be heard on
145.990 FM.
Check its posiiton with NASA J-Pass tool.

You can still use J-Pass - why do you think it's US only? Enter your
latitude and longitude, or click the "Options" button, click "Find by
name" and look for your closest city on the list - it's in alphabetical
order by country and then city, so you'll need to scroll down to the
correct country before looking for the city.

Suit Sat will travel all over the world! (above many countries).
The speed is: 7km per second (28000km per hour).
In 1,5 hour it made a full orbit arround earth!

is this the audio/telemetry/ID portion or is this the ATV video frequency?
the websites i've googled say so but i thought video needed bigger bandwidth
than what 2 meter can put out.

I am selling my DSP-12 on ebay.  Is this TNC usable with any of the
current set of satellites    or is it a useless relic.  I haven't used
it for the last 10 years and can't answer questions about it.

Rod

BID: $ANS-029.S1

VO-52 HAMSAT
Catalog Number: 28650
Launch Date: May 05,2005

Status: Operational
Current Mode: U/V - Indian Transponder

Proposed frequencies:

Indian Transponder:
Uplink : 435.220 MHz to 435.280 MHz LSB/CW
Downlink: 145.870 MHz to 145.930 MHz USB/CW
Beacom : 145.859330 MHZ CW

Dutch Transponder:
Uplink : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacon : 145.860MHz 12WPM with CW message

Official Webpage: http://www.amsat.in/hamsat.htm

To know what transponder is switched on please listen for the beacon
that is
active. Each transponder has a different beacon, see below:

Indian transponder - unmodulated carrier on
145.936MHz.
Dutch Transponder - CW message on 145.860MHz.

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink:    145.850 MHz (67.0 Hz PL tone) (See below for operating
         procedures)
Downlink:  436.795 MHz

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

There have been unconfirmed reports on the amsat-bb remailer that SO-50
has
shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of  74.4 Hz.
The
order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute
timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the
repeater
   on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset
the 10
   minute timer.

=====
AO-7 AMSAT OSCAR 7
Catalog number: 07530
Launch Date: November 15, 1974

Status: Operational until March 14th

```
Uplink:     145.850 to 145.950 MHz CW/USB Mode A
            432.125 to 432.175 MHz CW/LSB Mode B
Downlink:    29.400 to  29.500 MHz CW/USB Mode A (1W PEP)
            145.975 to 145.925 MHz CW/USB Mode B (8W PEP)
            145.975 to 145.925 MHz CW/USB Mode C (2W PEP)
Beacons:     29.502 MHz
            145.972 MHz
            435.100 MHz
           2304.100 MHz
```

AO-7's orbit no longer goes into eclipse, so it is operating on a 24 hour timer that changes the mode schedule at approximately 0900z each day. The timer alternates the satellite's operational mode between Mode A and Mode B.

Please use QRP when operating on AO-7! There are no batteries, and excessive power may cause unexpected behavior and possibly damage the satellite. Mode B users are likely to experience a Mode change from Mode B to Mode C if the buss voltage drops. This will be marked by a decrease in signal strength from AO-7 due to the lower power of Mode C.

AO-7 is expected to remain on this schedule until approximately 14 March

2006
at which time it will re-enter a period of eclipse on each orbit.

NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Operational

General Usage Uplink/Downlink:145.827 MHz 1200 Baud
Special Usage Downlink:       144.390 Mhz 1200 Baud

PCSAT APRS page: http://pcsat.aprs.org

Anyone can work PCSAT-1 with ANY typical 1200 baud packet
station on 145.825.  Just set your path to UNPROTO APRS via
ARISS (the same that you use via ARISS on the ISS or via PCSAT2).
Mobiles with the D700 or the TH-D7 HT APRS radios will see packets
directly on their front panel and can work it from their mobile.

UO-11 OSCAR-11
Catalog number: 14781
Launched: March 1, 1984

Status: Semi-operational?

Telemetry Downlink: 145.826 MHz. FM (1200-baud AFSK).
approx. 10 days ON, 10 days OFF
Mode-S Beacon: 2401.500 MHz. ... OFF
UHFBeacon: 435.025 MHz. ... OFF

Official webpage: http://www.users.zetnet.co.uk/clivew/
MPEG3 files: http://www.ne.jp/asahi/hamradio/je9pel/uo11tlme.htm

This from Clive, G3CWV:

Users of OSCAR-11 may be interested in recent additions to my website. Firstly UCAP, this is a simple OSCAR-11 capture program for Windows, and may be used instead of CTERM. It features an accurate time stamp facility, which is useful for checking the satellite's real time clock.

Secondly, the news and telemetry archives have been updated to include all the 2005 data. The URL is http://www.users.zetnet.co.uk/clivew

During the period 14 December 2005 to 23 January 2006 the VHF beacon on 145.826 MHz. has been heard from 23 to 31 December and from 11 to 21 January.

Signals during the December passes were very variable. Sometimes received at good strength, at other times they were inaudible , even with the BFO switched ON (ie. in CW mode). Signals during the January passes tended to be much stronger, and good copy was obtained on most passes.

The on-board clock continues to accumulate a very large error. On 21 January it was 22.14 days slow, having lost 0.33 days (8 hours) since 09 December. However, the rate of change of clock error appears to vary between zero and half an hour per day, over short periods. The greatest changes seem to correspond with poor signals, which suggests that the clock may slow or stop when the battery voltage is low.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed.
The status channels 60 to 67 are still working.

The satellite is now in continuous sunlight until around 06 May, when eclipses will start again. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures. Power supply problems can be caused by poor pointing attitude, ie the sunlight illuminating the ends of the satellite, instead of the solar arrays.

The watchdog timer now appears to have resumed operation on the 20 day cycle, ie. approximately ten days ON followed by 10 days OFF. However, at any time, poor solar attitude, and battery problems, may result in a low 14 volt line supply, which may cause the beacon to switch OFF prematurely, and reset the watchdog timer cycle.

The Beacon frequencies are -

VHF 145.826 MHz. AFSK FM ASCII Telemetry

UHF 435.025 MHz. OFF

S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is www.users.zetnet.co.uk/clivew/

If you place this bulletin on a terrestrial packet network, please
use the bulletin identifier $BID:U2RPT117.CWV, to prevent duplication.

SO-33 SEDSAT-1
Catalog number: 25509
Launched: October 24, 1998

Status: Semi-operational

Downlink: 437.910 MHz FM (9600-baud FSK)

The satellite is not currently available for uplink transmissions and
the image and transponder recovery efforts have been unsuccessful.

For more information on SedSat-1 visit the satellite web site:
http://seds.uah.edu/projects/sedsat/sedsat.htm

[ANS-WSR has no further information]
[05232004]
=====
SO-35 SUNSAT
Catalog Number:     ?
Launched:February 23, 1999

STatus: Non-Operational

Downlink: Mode B Repeater: 436.291 MHz
         Mode J Digipeater: 436.250 MHz

Uplinks: Mode B Repeater: 145.825 MHz
        Mode J Digipeater: 145.825 MHz and 145.900 MHz

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:

SB SAT @ AMSAT $ANS-029.01
SuitSat Release on February 3 - Are You Ready?

AMSAT News Service Bulletin 029.01
>From AMSAT HQ SILVER SPRING, MD.
January 29, 2006
To All RADIO AMATEURS

BID: $ANS-029.01

Frank Bauer, KA3HDO, who is the ARISS International Chairman and AMSAT's V.P. for Human Spaceflight Programs, reminds us if all goes well, SuitSat will be deployed in 5 days. Are you ready?

Have you talked to a school in your area about SuitSat? Or a student group? Is your SSTV receive capability ready for the challenge?

SuitSat will be deployed during a Russian EVA scheduled to take place on Friday, February 3 at approximately 22:20 UTC. NASA TV will provide live coverage starting at 21:30 UTC. For digital downlink information and access to NASA TV's Public Channel on the Web in RealPlayer, RealAudio, or Windows Media Player formats, visit http://www.nasa.gov/ntv.

Russian Cosmonaut Tokarev will carefully jettison SuitSat-1 by pushing the suit away at about a 30-degree angle upward and about 10 degrees to the left of the back of the station.

Once activated, those who hear SuitSat transmissions on 145.99 MHz are asked to enter their realtime data on the SuitSat website, http://www.suitsat.org/ so that participants around the world can track the satellite.

Educational Outreach reports (at schools or informal education sites) as well as Slow Scan TV images can be sent to suitsat@comcast.net. This information will be compiled by the ARISS team.

Other information on SuitSat can be found on:

http://www.amsat.org (includes a countdown timer to SuitSat release)
http://www.rac.ca/ariss
http://www.issfanclub.com
http://http://www.amsat.org/amsat/archive/sarex/48hour/threads.html

NASA Education Website information for students:
http://www.nasa.gov/audience/forstudents/k-4/home/index.html
http://www.nasa.gov/audience/forstudents/5-8/features/index.html
http://www.nasa.gov/audience/forstudents/9-12/features/index.html
http://www.nasa.gov/audience/forstudents/postsecondary/features/index.html

SuitSat-1, called Radioskaf or Radio Sputnik in Russian, is sponsored by ARISS (Amateur Radio on the International Space Station), an international working group made up of volunteers from national amateur radio societies, including the Radio Amateur Satellite Corporation.

The Russian space company, Energia, led the development of SuitSat and has trained the crew for the deployment mission.

[ANS thanks Frank, KA3HDO and the ARISS team for the above information]

SB SAT @ AMSAT $ANS-029.02
ISS Contacts West Point

AMSAT News Service Bulletin 029.02
>From AMSAT HQ SILVER SPRING, MD.
January 29, 2006
To All RADIO AMATEURS
BID: $ANS-029.02

Last January 26th, The ISS conducted a QSO with the U.S. Military Academy, West Point.   Cmdr. Bill McCarthur talked with his "Alma Mater" at 13:13 UTC. An interesting contact sparking interest in space flight with many Corp Cadets.
Bill has been quite active and using his time well to communicate with many during his spare time. He even has completed WAS and WAC from the ISS.
ARISS offers an opportunity for students to experience the excitement of Amateur Radio by talking directly with crewmembers on-board the International Space Station. Teachers, parents and communities see, first hand, how Amateur Radio and crewmembers on ISS can energize youngsters' interest in science, technology, and learning. Further information on the ARISS program is available on the website
http://www.rac.ca/ariss
(graciously hosted by the Radio Amateurs of Canada).

Thank you & 73,
Kenneth - N5VHO

[ANS thanks Ken, N5VHO, for the above information]

SB SAT @ AMSAT $ANS-029.03
Ship to be named USS Alan Shepard

AMSAT News Service Bulletin 029.03
>From AMSAT HQ SILVER SPRING, MD.
January 29, 2006
To All RADIO AMATEURS
BID: $ANS-029.03

The following article was in the The EAGLE-TRIBUNE Newspaper(N.Andover,Ma) and reprinted with their permission.

Ship to be named USS Alan Shepard

By John Basilesco
Staff writer

DERRY, N.H. -- A new U.S. Navy ship will be named the USS Alan

Shepard in honor of the accomplished Derry native and first American in space. The Navy will name the vessel, which is about to be built, after the famous astronaut, who grew up in East Derry and graduated from Pinkerton Academy.

The 1,000-foot combat support ship will be built in San Diego and delivered to Navy by March 2007. U.S. Sens. Judd Gregg and John Sununu and Congressmen Charles Bass and Jeb Bradley, all of New Hampshire, made the announcement yesterday. "I think it's great,'' said state Rep. George Katsakiores, R-Derry. "It's quite an honor to have a ship named after you; it's a national honor.''

Katsakiores, 82, attended Pinkerton Academy with Shepard. "I knew him very well because he used to live in East Derry and his sister, Pauline, was in my class at Pinkerton,'' Katsakiores said.

Shepard graduated in 1940 and Katsakiores graduated in 1942. Katsakiores recalls having a full house at his bar and restaurant in Derry in 1961 with everyone glued to a 10-inch black-and-white television watching Shepard blast off into space. "We applaud the Navy's decision to honor the legacy and contributions of New Hampshire's native son Alan Shepard Jr. by naming one of the new combat support ships after him,'' Gregg, Sununu, Bass and Bradley said in a joint statement.

"Alan Shepard led a distinguished career in the U.S. Navy and at NASA, and naming a ship after him will be a fitting tribute to one of the nation's greatest pilots and astronauts. The USS Alan Shepard will play an important role in providing for our Navy's readiness and allow the Navy to maintain a forward presence in the 21st Century.''

Along with distinguishing himself as a pioneer in America's efforts to explore space, Shepard was one of only 12 Americans to walk on the moon. Following his 1961 space flight, Shepard battled an inner ear disorder before soaring back into space in 1974 as commander of the Apollo 14 mission to the moon. He spent 33 hours on the moon during this third lunar landing mission and became the only lunar golfer.

He died from leukemia at the age of 74 in 1998 while living in Houston, Texas. Three years later, he was honored on the 40th anniversary of his historic space flight when the Derry post office on Tsienneto Road was named the Alan B. Shepard Jr. Post Office Building. A section of Interstate 93 is also named after him. The combat support ship will deliver supplies, transfer cargo and provide logistic support to other Navy vessels.

[ANS thanks Arthur, N1ORC, for the above information]

OSCAR 11 Report
January 23, 2006

AMSAT News Service Bulletin 029.04
>From AMSAT HQ SILVER SPRING, MD.
January 29, 2006
To All RADIO AMATEURS

BID: $ANS-029.04

OSCAR-11 REPORT

24 January 2006

Users of OSCAR-11 may be interested in recent additions to my website. Firstly UCAP, this is a simple OSCAR-11 capture program for Windows, and may be used instead of CTERM. It features an accurate time stamp facility, which is useful for checking the satellite's real time clock.

Secondly, the news and telemetry archives have been updated to include all the 2005 data. The URL is www.users.zetnet.co.uk/clivew

During the period 14 December 2005 to 23 January 2006 the VHF beacon on 145.826 MHz. has been heard from 23 to 31 December and from 11 to 21 January.

Signals during the December passes were very variable. Sometimes received at good strength, at other times they were inaudible , even with the BFO switched ON (ie. in CW mode). Signals during the January passes tended to be much stronger, and good copy was obtained on most passes.

The on-board clock continues to accumulate a very large error. On 21 January it was 22.14 days slow, having lost 0.33 days (8 hours) since 09 December. However, the rate of change of clock error appears to vary between zero and half an hour per day, over short periods. The greatest changes seem to correspond with poor signals, which suggests that the clock may slow or stop when the battery voltage is low.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working.

The satellite is now in continuous sunlight until around 06 May, when eclipses will start again. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures. Power supply problems can be caused by poor pointing attitude, ie the sunlight illuminating the ends of the satellite, instead of the solar arrays.

The watchdog timer now appears to have resumed operation on the 20 day cycle, ie. approximately ten days ON followed by 10 days OFF. However, at any time, poor solar attitude, and battery problems, may result in a low 14 volt line supply, which may cause the beacon to switch OFF prematurely, and reset the watchdog timer cycle.

The Beacon frequencies are -
VHF 145.826 MHz. AFSK FM ASCII Telemetry

UHF 435.025 MHz. OFF

S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is www.users.zetnet.co.uk/clivew/

If you place this bulletin on a terrestrial packet network, please use the bulletin identifier $BID:U2RPT117.CWV, to prevent duplication.

73 Clive G3CWV

[ANS thanks Clive, G3CWV, for the above information]

January 29, 2006
To All RADIO AMATEURS
BID: $ANS-029.05

ARISS Status
January 23, 2006

1. Georgia Tech Contact Successful

On January 19, eight students from Georgia Tech in Atlanta, Georgia had the opportunity to speak with alumnus Bill McArthur, KC5ACR. Fifteen questions were asked and answered as at least 100 visitors gathered in the campus theater to listen in. Campus news organizations covered the event, as did the local CBS and FOX affiliates, and campus radio station WREK carried the contact live and streamed audio on its website. Announcements of the event on local nets allowed other radio operators in the area to listen in. Radio coordinator Alexander Carver remarked, "Needless to say we all had a blast. Everyone walked out of the room with a grin from ear to ear. It's not often we get to speak to an alum 200 miles straight up."

2. ARRL Article on Peterson, St. Albert School Contacts

ARRL ran an article covering the Peterson Elementary School and St Albert the Great School contacts. "ISS Commander Visits Home via Ham Radio, Talks Space Trash with Ohio Kids" may be found at:
http://www.arrl.org/news/stories/2006/01/19/1/?nc=1

3. McArthur Completes "Worked All States"

Bill McArthur, KC5ACR, worked a station in Alaska over the weekend, completing his Worked All States award. He continues to pursue his DXCC award, having worked 68 countries as of January 17, and is looking for more - including those in the Caribbean.

4. SuitSat Receives Media Attention

Aviation Week and Space Technology, the premier U.S. Weekly aviation and space magazine read by thousands of engineers and leaders, worldwide, in the aerospace field, is planning to publish an article on SuitSat. ARISS Chairman Frank Bauer provided his SuitSat paper to the publication for background information on the satellite. The article is expected to run in the next week or two.

AMSAT SM (Sweden) has posted a SuitSat article on its website with links to sites with other SuitSat information including video, papers, and articles. See: http://www.amsat.se/cgi-bin/main/index.pl

The ARRL Journal published a SuitSat article this month which intrigued scouts attending the annual Boy Scouts Radio Merit Badge Day at the Sarnoff Corporation HQ in Princeton, NJ.   The Scouts were very excited about the upcoming satellite and many expressed an interest not only in the project, but also in becoming licensed radio amateurs.

5. SuitSat EVA and Website

SuitSat will be deployed during a Russian EVA scheduled to take place on Friday, February 3 at approximately 22:20 UTC. Once activated, those who hear SuitSat transmissions are asked to enter their data on the SuitSat website, www.suitsat.org so that participants around the world can track the satellite. Educational Outreach reports (at schools or informal education sites) as well as Slow Scan TV images can be sent to suitsat@comcast.net. This information will be compiled by the ARISS team.

6. Astronaut Training Status

On Wednesday, January 11, astronaut Garrett Reismann took and passed his amateur radio license exam. He has been issued the callsign KE5HAE.

On January 17, Clay Anderson, KD5PLA, attended a one hour refresher session with Kenneth Ransom at JSC. The session covered school contact procedures, general operating practices, and some hands on time spent practicing with the on board training hardware.

7. ARRL Article on Upcoming AMSAT Meeting

On January 18, ARRL ran a story on the AMSAT - ARISS joint meetings to be held in October. To view, "AMSAT Space Symposium set for October," go to: http://www.arrl.org/

8. Space Day 2006

AMSAT has again been invited to set up an activity center at the Space Day event to be held at the Steven F. Udvar-Hazy Center on Friday, May 5. The theme this year is "Living and Working on the Moon." AMSAT hosted a station last year which included an ARISS display, and representatives were on hand to distribute ARISS lithographs and answer questions.

[ANS thanks Carol, KB3LKI, for the above information]

AMSAT NEWS SERVICE
ANS-032

****
****
** SPECIAL SUITSAT EDITION **
****
****

This special edition of ANS is a free news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:
ans-editor@amsat.org

In this special edition:

* Two More Days Until SuitSat!
* Commemorative SuitSat QSL Certificate Will Be Available
* Amateur Radio Performs Key Role in SuitSat's Main Mission
* Area Coordinator Makes Educational Outreach Materials Available On-line
* ISS Packet Turned Off for Duration of SuitSat
* ISS Cross-Band Repeater May Relay SuitSat Signals on 437.800 MHz
* How to Receive SuitSat's SSTV Image
* SuitSat Web Link Compendium

SB SAT @ AMSAT $ANS-032.01
Two More Days Until SuitSat!

AMSAT News Service Bulletin 032.01
From AMSAT HQ SILVER SPRING, MD.
February 1, 2006
To All RADIO AMATEURS
BID: $ANS-032.01

Frank Bauer, KA3HDO, who is the ARISS International Chairman and AMSAT's V.P. for Human Spaceflight Programs, reminds us if all goes well, SuitSat will be deployed in 2 days. Are you ready?

SuitSat will be deployed during a Russian EVA scheduled to take place on Friday, February 3 at approximately 22:20 UTC. NASA TV will provide live coverage starting at 21:30 UTC. For digital downlink information and access to NASA TV's Public Channel on the Web in RealPlayer, RealAudio, or Windows Media Player formats, visit http://www.nasa.gov/ntv.

Once the crew is outside on their EVA, they turn all three switches on the control box to the ON position and deploy the spacesuit from ISS. About eight minutes after the crew flips the three switches the Kenwood transmitter will power up. About eight minutes after that, the first voicetelemetry message will be transmitted and SuitSat operations begin! This 16 minute delay is a crew safety measure.

Next, Russian Cosmonaut Tokarev will carefully jettison SuitSat-1 by pushing the suit away at about a 30-degree angle upward and about 10 degrees to the left of the back of the station.

Once activated, those who hear SuitSat transmissions on 145.99 MHz are asked to enter their realtime data on the SuitSat website, http://www.suitsat.org/ so that participants around the world can track the satellite.

When first released SuitSat will be in pretty much the same orbit as the International Space Station. This means initially the ISS tracking parameters can also be used to track SuitSat. SuitSat will not have any thrust to maintain its orbit so it will begin to reenter the Earth's atmosphere after a few weeks. As SuitSat's orbit decays it will "fall" closer to Earth. As the days go by, SuitSat's lower orbit will begin to lead the ISS orbit so you will need to begin listening a few minutes earlier than when the ISS is predicted to come over your location.

You can track the location of the ISS on the AMSAT website at:
http://www.amsat.org/amsat-new/tools/predict/satloc.php?lang=en&satellite=ISS

You can also get a listing of ISS passes at:
http://www.amsat.org/amsat-new/tools/predict/
Just enter your location and select the ISS.

Educational Outreach reports (at schools or informal education sites) as well as Slow Scan TV images can be sent to suitsat@comcast.net. This information will be compiled by the ARISS team.

[ANS thanks Frank, KA3HDO and the ARISS Team for the above information]

/EX

SB SAT @ AMSAT $ANS-032.02
Commemorative SuitSat QSL Certificate Will Be Available

AMSAT News Service Bulletin 032.02
From AMSAT HQ SILVER SPRING, MD.
February 1, 2006
To All RADIO AMATEURS
BID: $ANS-032.02

Students, scouts, teachers, ham radio operators, and the general public are encouraged to track the space suit, hear the conversations from space, copy the suit telemetry and capture the picture.

There will also be a special endorsement on the award certificate for those students who receive the "special words" that are embedded in the messages from our SuitSat student "crew members." These special words are in different languages - English, French, German, Spanish, Russian, and Japanese. You are encouraged to record the SuitSat downlink audio and get help from fellow students who know these languages.

Radio Amateurs, students and teachers who hear SuitSat should send their signal reports with a large (9x12 inch) self-addressed stamped envelope to one of these addresses listed below:

- USA: ARRL Headquarters
  SuitSat QSL
  225 Main Street
  Newington, CT 06111-1494 USA

- Canada: Radio Amateurs of Canada
  SuitSat QSL
  720 Belfast Road
  Suite 217 Ottawa Ontario K1G 0Z5

- Europe: F1MOJ - Mr CANDEBAT Christophe
  SuitSat Europe QSL Manager
  7 Rue Roger Bernard
  30470 AIMARGUES FRANCE

- Japan: SuitSat Japan QSL
  JARL International Section
  Tokyo 170-8073 JAPAN

- Russia: Alexander Davydov, RN3DK
  Novo - Mytishchinsky prospekt 52 - 111
  Mytishchi 18
  Moskovskaya obl. 141018, RUSSIA

- Other Countries: Please use the US or Canadian address above.

Also included in this spacesuit is a computer Compact Disk (CD) with images of over 300 items collected from schools and educational organizations around the world. These include creative works of art from students as well as student signatures, school or scout logos, and class or group pictures. Students, schools and educational organizations that participated in the development of this disk earlier this year will all be part of the SuitSat spacewalk---as their creative works, signatures and pictures all float in space!

[ANS thanks the ARISS team for the above information]

SB SAT @ AMSAT $ANS-032.03
Amateur Radio Performs Key Role in SuitSat's Main Mission

AMSAT News Service Bulletin 032.03
From AMSAT HQ SILVER SPRING, MD.
February 1, 2006
To All RADIO AMATEURS
BID: $ANS-032.03

The idea for SuitSat was first conceived by the ARISS-Russia team, led by Sergey Samburov, RV3DR, and was extensively discussed at the joint AMSAT Symposium/ARISS International Partner meeting in October 2004. The project, is being led by project manager A. P. Alexandrov and Deputy Project Manager A. Poleshuk from RSC Energia, located in Korolev (Moscow area) Russia. The project was developed primarily by a joint US/Russian team. On the US side, the hardware project development was led by AMSAT member Lou McFadin, W5DID.

The official name for this mission is SuitSat-1, also called Radioskaf or Radio Sputnik in Russian. SuitSat-1 is the first live test of using the old spacesuits as inexpensive on-orbit platforms for instrumentation, space photography, telemetry, and communications.

Exposed to the full rays of the sun in space will SuitSat be able to operate in these extreme conditions? How will communications be affected if SuitSat begins to tumble? How long will the batteries last? Amateur Radio will be pioneering the answers to these questions in the days to come.

An additional benefit is the opportunity to bring space science into the classroom.

[ANS thanks ARISS-Russia and Energia for the above information]

/EX

SB SAT @ AMSAT $ANS-032.04
Area Coordinator Makes Educational Outreach Materials Available On-line

AMSAT News Service Bulletin 032.04
From AMSAT HQ SILVER SPRING, MD.
February 1, 2006
To All RADIO AMATEURS
BID: $ANS-032.04

Pat Kilroy, N8PK and David Bern, W2LNX provided a well received educational mission this past week to Parkland Middle School in the Washington, DC area. Included below is Pat's documentation which can be used with NASA and AMSAT materials for SuitSat educational opportunities in the coming days.

Also included are photos from the school visit.

SUITSAT: A Special (and Brief) Opportunity
Updated January 25, 2006

Original material is at: http://www.patkilroy.com/amsat-dc/

An old Russian space suit will be tossed off of the ISS during a spacewalk on February 3, 2006 (or after). The suit will be empty inside except for radio gear assembled for a special occasion.

Transmitting nearly continuously, kids around the world will enjoy its spoken messages over the life of the batteries, designed to last for a few days, perhaps a week.

The "SuitSat" will co-orbit with the space station for a while. Atmospheric drag will drift it into "its own" orbit, a decaying one, and will gradually warm up the suit and the stuff inside.

Listen for the 8-minute cycle of announcements when it flies overhead. You will hear "spoken" MET in minutes, the inside temperature in degrees C (not F) and battery voltage telemetry, pre-recorded greetings in multiple languages, a single "cell phone quality" SSTV picture frame in Robot-36 mode, as well as the voice ID on 145.990 MHz FM at 500 mW into its low-gain omni antenna.

SuitSat will re-enter the atmosphere in a few weeks, long after the batteries run dry. Time is of the essence and you ought to prepare now for this unique and fun experiment.

You may download a 6-page color document by Gould Smith, WA4SXM, and Steve Bible, N7HPR, (600 KB in PDF, dated November 5, 2005) at
http://www.patkilroy.com/amsat-dc/SuitSat%20-%20A%20Unique%20Satellite.pdf

This has a full description of the event, additional technical details and several great photos. Go to the main AMSAT-NA web site for additional descriptions, late breaking news, and tracking data updated daily after SuitSat is deployed.

For lighter reading you may download a copy of a NASA press release written for kids:
http://www.patkilroy.com/amsat-dc/NASA_SuitSat_kids.pdf

Kids are welcome to take this copy to their school to ask permission to listen for SuitSat during class time. In addition to this press release, a sheet of technical details and the schedule for a televised (and webcast) press conference is offered for their teacher or mentor at: http://www.patkilroy.com/amsat-dc/ANS%20SuitSat%202006-0122pk.pdf

Enjoy these three documents. Each one has links noted where you can get updated information.

For those Amateur Radio operators in the greater Maryland and D.C. area, PLEASE REPORT YOUR OBSERVATIONS to us on the amsat-dc mail list. Of special interest to me are results of antenna A/B tests (omni vs. yagi reception) and your results of Doppler compensation (of how valuable it is or was or was not for the SuitSat experiment). Did you bother to make an audio recording of a pass? WAV or mp3? Any students involved? K-5, 6-8, 9-12, college, family, club or general public demo?

Get this into the schools! PASS THE WORD about this special event to other radio amateurs so they can prepare their station and share the news further.

Have fun!

Sincerely,

Pat Kilroy, N8PK
AMSAT Area Coordinator
Greater MDC Area

[ANS thanks Pat, N8PK for the above information]

SB SAT @ AMSAT $ANS-032.05
ISS Packet Turned Off for Duration of SuitSat

AMSAT News Service Bulletin 032.05
From AMSAT HQ SILVER SPRING, MD.
February 1, 2006
To All RADIO AMATEURS
BID: $ANS-032.05

For the duration of the SuitSat project, the ISS packet mode will be turned OFF. Please do not transmit any packet or voice data on 145.990 MHz which is also the SuitSat down link frequency.

[ANS thanks Miles, WF1F for the above information]

/EX

SB SAT @ AMSAT $ANS-032.06
ISS Cross-Band Repeater May Relay SuitSat Signals on 437.800 MHz

AMSAT News Service Bulletin 032.06
From AMSAT HQ SILVER SPRING, MD.
February 1, 2006
To All RADIO AMATEURS
BID: $ANS-032.06

There is a possibility that the ISS Kenwood D700 may be configured to act as a telemetry cross band repeater for the SuitSat project.

The Russian team is working on the details to program the D700 to retransmit the telemetry from the SuitSat via 437.800 MHz FM. The reason for the rebroadcast is to extend the listening range of the SuitSat project.

When SuitSat is launched, it will be flying very close to the ISS. As the days go by, the distance between the two satellites will gradually increase to hundreds of miles. SuitSat will eventually lead the ISS by several minutes.

The cross band telemetry mode can in theory double the listening range of the SuitSat project. The 2-6 day battery life of the SuitSat will be the actual limiting factor of this project.

[ANS thanks Miles, WF1F for the above information]

/EX

SB SAT @ AMSAT $ANS-032.07
How to Receive SuitSat's SSTV Image

AMSAT News Service Bulletin 032.07
From AMSAT HQ SILVER SPRING, MD.
February 1, 2006
To All RADIO AMATEURS
BID: $ANS-032.07

Slow Scan Television, or SSTV, is a method used by Amateur Radio stations to send JPG still images around the world. SSTV translates the picture information in an audio format suitable for transmission by radio.

The SuitSat project will transmit telemetry, pre-recorded voice messages and one SSTV image using the Robot 36 format. The message cycle will repeat approximately every 9 minutes.

To view the SSTV image you will need to connect your computer to the speaker of your radio. Your computer will require SSTV decoding software available from the sources below:

ChromaPix
http://www.barberdsp.com/

W95SSTV by Silicon Pixels
http://www.barberdsp.com/w95sstv/w95dload.htm

MMSSTV
http://mmhamsoft.ham-radio.ch/

Start with this web page to help you learn more about Slow Scan TV:

http://www.marexmg.org/fileshtml/sstvlinkpage.html

For tips on how to use SSTV, Packet and Voice via the ISS see:
http://www.marexmg.org/fileshtml/howtouseiss.html

Excellent information with links to SSTV software downloads can be found on W2MU's SSTV Page: http://www.qsl.net/wm2u/sstv.html

[ANS thanks Miles, WF1F for the above information]

Hello All,

Keith (ZS6TW) received at 4 februari (12:45UTC) SUITSAT on 50 degrees
elevation.
Keith could hear Russian language from SUITSAT.
The equipment ZS6TW used:
Transceiver: Yaesu FT-847
Antennas: 2 X F9FT 17 elements yagis (16dBd gain).
Keith reported that it is importand to use FM narrow to
receive the weak (narrow) signals out the noise (doppler correction is
requered!!!).
He received SUITSAT at the same place as ISS, so the
Suitsat was (at 4 februari 12:45UTC) not far behind the ISS.

The audio file is for public use so spread arround the world!

73's Keith ZS6TW
The audio file you can download from PD0RKC website:
http://pd0rkc.ontwikkel.nl

B S Expert translated the ancient runes thusly:

>
>> is too damn cool! Thanks!
>>
>
> This must be a new meaning of the word cool hitherto unheard of......

Possibly the original meaning, concerning temperature. SuitSat froze and
its batteries froze up on its second orbit. Now *that* is cool! In
fact, downright bloody cold!

Kate vk4xyl

I just listened to the pass across my area and heard nothing. I even recorded the baseband audio for later processing but it really didn't sound like anything to process:-(

I think I will wait until the next pass at around 4am and see if results are
any better. Bad part is, I'm surrounded by mountains and it has to be pretty
high in elevation for me to hear it.

Good luck to all,
Rod

P.S. They have reported it's FAR weaker than expected, but it is doing it's
thang so keep trying!!!

No soap on the 4am pass either;-(
This time I set up to record the baseband on the left channel and the speaker audio on the right channel.
Unfortunately, nothing was heard.

luck to all,
RoD

Oh well, Maybe I will hear the next suit they throw overboard. ;-)

The reports I have heard are that it's still alive and kicking but FAR
weaker than expected.
I know it was a long shot but I had insomnia anyway and figured I would
listen and try.

well comuism certainly had it problems but the current system of
pretending they have a a working market economy s.. leaves a lot to be
desired

Can't you just get up during the night to listen? It is a rather rare opportunity, after all. Get everything set up ahead of time so you don't go waking the wife and kiddies with your crashing around in the dark!

do what i am going to do
leave the scanner squelched upon loud volume or
these 2.4GHz retransmitters for tv are quite good also.
or if your not near a scanner connected to an outside aerial....
just use a small tv in the bedroom and retransmit just the scanner audio via
the rca phono socket.

SB SAT @ AMSAT $ANS-037.01
OSCAR Number for SuitSat

AMSAT News Service Bulletin 037.01
From AMSAT HQ SILVER SPRING, MD.
February 6, 2006
To All RADIO AMATEURS
BID: $ANS-037.01

Bill Tynan, W3XO, former President of AMSAT-NA and the OSCAR number coordinator has issued this statement:

From the information sent to me regarding the SuitSat project, it is clear that the SuitSat spacecraft IS qualified to receive an OSCAR number.

Therefore, by the authority vested in me by the AMSAT-NA President, I am pleased to issue this new amateur satellite the designation AMSAT-OSCAR-54, or AO-54.

Congratulations are in order to Frank Bauer, KA3HDO, Sergey Samburov, RV3DR and the entire Radioskaf/Suitsat team for mounting this exciting and attention-getting project. Seldom has an amateur radio event captured the public's imagination and evoked so much positive news media coverage as SuitSat has.

73,
Bill Tynan, W3XO

For the details regarding OSCAR Number Assignment refer to:
http://www.amsat.org/amsat/amsat-na/oscar.html

AO-54 SUITSAT
Catalog Number:
Release Date: February 3,2006

Proposed Callsign: RS0RS
Downlink: 145.990 FM

Modes :   FM Voice Telemetry/Greetings
            FM SSTV

Official webpage: http://www.suitsat.org

There are reports of Strong to No signal from Suitsat this weekend. Most of the ones reporting getting strong signals are stations with high gain

```
antenna
set-ups.

There are also reports that the ISS has setup their crossband repeater
to re-
transmit from 145.990 to 437.800 to help those that would like to hear
what
Suitsat sounds like.

=====
VO-52 HAMSAT
Catalog Number: 28650
Launch Date: May 05,2005

Status: Operational
Current Mode: U/V - Indian Transponder

Proposed frequencies:
--------------------
Indian Transponder:
Uplink  : 435.220 MHz to 435.280 MHz LSB/CW
Downlink: 145.870 MHz to 145.930 MHz USB/CW
Beacom  : 145.859330 MHZ CW

Dutch Transponder:
Uplink  : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacon  : 145.860MHz 12WPM with CW message

Official Webpage: http://www.amsat.in/hamsat.htm

To know what transponder is switched on please listen for the beacon
that is
active. Each transponder has a different beacon, see below:

Indian transponder - unmodulated carrier on
145.936MHz.
Dutch Transponder  - CW message on 145.860MHz.

                        145.920 MHz FM 67Hz PL tone
```

1268.700 MHz FM 67Hz PL tone

Digital Downlinks: 435.150 MHz FM, 38k4 Digital, PBP, 1 watt output
2401.200 MHz FM 38k4 bps, AX.25
Digital Uplink: 145.860 MHz FM, 9k6 Digital, Pacsat Broadcast Protocol (PBP)

Broadcast: PECHO-11
BBS: PECHO-12

Official Webpage: http://www.amsat.org/amsat-new/echo/

Schedule from the AO-51 Command Team:

Feb 5
FM Repeater, V/S
Uplink: 145.920 mhz FM, No PL Tone
Downlink 2401.200 mhz FM

Feb 12
QRP FM Repeater, V/U
Uplink: 145.880 mhz FM, no PL Tone
Downlink 435.150 mhz FM
FM Repeater, V/U
Uplink: 145.920 mhz FM, 67 hz PL Tone
Downlink 435.300 mhz FM

Feb 19
9k6 Digital, V/U, High Power, PBP BBS (Pacsat Broadcast Protocol BBS)
TLM Data Active, Digipeater ON
Uplink: 145.860 mhz FM, 9k6 PBP Digital
Downlink: 435.150 mhz FM, 9k6 PBP Digital
Digipeater will be Turned ON

Feb 26
FM Repeater, V/U
Uplink: 145.920 mhz FM, 67 hz PL Tone
Downlink 435.300 mhz FM
9k6 Digital, V/U, PBP BBS (Pacsat Broadcast Protocol BBS)
TLM Data Active
Uplink: 145.860 mhz FM, 9k6 PBP Digital
Downlink: 435.150 mhz FM, 9k6 PBP Digital
[02062006]

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating procedures)
Downlink: 436.795 MHz

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

There have been unconfirmed reports on the amsat-bb remailer that SO-50 has
shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz. The
order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater
   on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10
   minute timer.

[01012006]
=====
FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

unOfficial Webpage: http://www.amsat.org/amsat/sats/n7hpr/fo29.html
[11132005]
=====
AO-27 AMRAD
Catalog number: 22825
Launched: September 26, 1993

Status: Operational

Uplink: 145.850 MHz FM
Downlink: 436.795 MHz FM

Official Webpage: http://www.ao27.org

```
[01012006]
=====
AO-7 AMSAT OSCAR 7
Catalog number: 07530
Launch Date: November 15, 1974

Status: Operational until March 14th

Uplink:     145.850 to 145.950 MHz CW/USB Mode A
            432.125 to 432.175 MHz CW/LSB Mode B
Downlink:    29.400 to  29.500 MHz CW/USB Mode A (1W PEP)
            145.975 to 145.925 MHz CW/USB Mode B (8W PEP)
            145.975 to 145.925 MHz CW/USB Mode C (2W PEP)
Beacons:     29.502 MHz
            145.972 MHz
            435.100 MHz
           2304.100 MHz

AO-7's orbit no longer goes into eclipse, so it is operating on a 24
hour
timer that changes the mode schedule at approximately 0900z each day.
The
timer alternates the satellite's operational mode between Mode A and
Mode B.

Please use QRP when operating on AO-7!  There are no batteries, and
excessive
power may cause unexpected behavior and possibly damage the satellite.
Mode
B users are likely to experience a Mode change from Mode B to Mode C if
the
buss voltage drops.  This will be marked by a decrease in signal
strength
from AO-7 due to the lower power of Mode C.

AO-7 is expected to remain on this schedule until approximately 14 March
2006
at which time it will re-enter a period of eclipse on each orbit.

Official Webpage:
http://www.amsat.org/amsat-new/satellites/sat_summary/ao7.php
The AO-7 Logbook and Resource Website:
http://www.planetemily.com/ao7/
AO-7 users are requested to log their contacts and observations about
AO-7,
especially any unexpected mode changes.
AO-07 telemetry software webpage:
http://www.qsl.net/k3tz/files/K3TZ_AO-07_Telemetry_Decoder_0.5.zip

=====
AO-16 PACSAT
Catalog number: 20439
Launch Date: January 22, 1990

Status: Semi-operational, the digipeater command is on and open for
APRS users.

Uplink: 145.90 145.92 145.94 145.96 MHz FM
                    (using 1200-baud Manchester FSK)
Downlink: 437.026 MHz SSB (1200-baud PSK)
Mode-S Beacon: 2401.1428 MHz
Broadcast Callsign: PACSAT-11
BBS: PACSAT-12

AMSAT Webpage: http://www.amsat.org/amsat/sats/n7hpr/ao16.html
[01012006]

=====
UO-11 OSCAR-11
Catalog number: 14781
Launched: March 1, 1984

Status: Semi-operational?

Telemetry Downlink: 145.826 MHz. FM (1200-baud AFSK).
                   approx. 10 days ON, 10 days OFF
Mode-S Beacon: 2401.500 MHz. ... OFF
UHFBeacon: 435.025 MHz. ... OFF

Official webpage: http://www.users.zetnet.co.uk/clivew/
MPEG3 files: http://www.ne.jp/asahi/hamradio/je9pel/uo11tlme.htm

This from Clive, G3CWV:

Users of OSCAR-11 may be interested in recent additions to my website. Firstly UCAP, this is a simple OSCAR-11 capture program for Windows, and may be used instead of CTERM. It features an accurate time stamp facility, which is useful for checking the satellite's real time clock.

Secondly, the news and telemetry archives have been updated to include all the 2005 data. The URL is http://www.users.zetnet.co.uk/clivew

During the period 14 December 2005 to 23 January 2006 the VHF beacon on 145.826 MHz. has been heard from 23 to 31 December and from 11 to 21 January.

Signals during the December passes were very variable. Sometimes received at good strength, at other times they were inaudible , even with the BFO switched ON (ie. in CW mode). Signals during the January passes tended to be much stronger, and good copy was obtained on most passes.

The on-board clock continues to accumulate a very large error. On 21 January it was 22.14 days slow, having lost 0.33 days (8 hours) since 09 December. However, the rate of change of clock error appears to vary between zero and half an hour per day, over short periods. The greatest changes seem to correspond with poor signals, which suggests that the clock may slow or stop when the battery voltage is low.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed.
The status channels 60 to 67 are still working.

The satellite is now in continuous sunlight until around 06 May, when eclipses will start again. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures. Power supply problems can be caused by poor pointing attitude, ie the sunlight illuminating the ends of the satellite, instead of the solar arrays.

The watchdog timer now appears to have resumed operation on the 20 day cycle, ie. approximately ten days ON followed by 10 days OFF. However, at any time, poor solar attitude, and battery problems, may result in a low 14 volt line supply, which may cause the beacon to switch OFF prematurely, and reset the watchdog timer cycle.

The Beacon frequencies are -

VHF 145.826 MHz. AFSK FM ASCII Telemetry

UHF 435.025 MHz. OFF

S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is www.users.zetnet.co.uk/clivew/

If you place this bulletin on a terrestrial packet network, please use the bulletin identifier $BID:U2RPT117.CWV, to prevent duplication.

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen,

G0FCL and John Branegan GM4IHJ.

Paraphrasing Mark Twain....the demise of SuitSat-1 is highly exaggerated!!

It is now nearly 24 hours since the successful deployment of the SuitSat-1 experiment. These past 24 hours have been a wild ride of emotions...tremendous highs...deep lows when people reported no signals and said SuitSat-1 was dead and now....some optimism.

It is absolutely clear that SuitSat-1 is alive. It was successfully turned on by the ISS crew prior to deploy and the timing, micro-controller functions and audio appear to be operating nominally. The prime issue appears to be an extremely weak signal.

I have heard several recordings and have monitored two passes today. When the signal is above the noise level, you can clearly hear partials of the student voices, the station ID and the SSTV signal. One of the complicating factors in reception is the very deep fades that occur due to the spin of SuitSat.

Based on the information we know thus far, one can narrow down the issue to the antenna, the feedline, the transmitter output power and/or any of the connections in between. Through your help, we would like to narrow down the issue further and also gather some internal telemetry from the Suit. If the transmitter is running at full power, we would expect the Suit to end operations in the next few days to a week. If it is not, then it will operate much longer. Since we do not know how long this experiment will last, we ask for those with powerful receive stations to listen for SuitSat---especially during direct overhead passes when the Suit is closest to your area. If you can record these passes and send the audio to us, it would be most appreciated. We will continue to be optimistic that this issue will right itself before the batteries are depleted. So please KEEP LISTENING!

Based on what we have learned, we would like to provide the following guidelines to save you time and facilitate gathering information:

1) You need as high a gain antenna as possible with mast mounted pre-amps. An arrow is the minimal set...it provides very brief snippets of the communications. HTs and scanners won't cut it.

2) I would not waste your time on passes below 40 degrees elevation. SuitSat is too far from your station to receive a reliable signal. We have found that closest approach provides several seconds of SuitSat communication with 22 element yagis.

3) The "gold" we are looking for right now is the telemetry information and how long the vehicle stays operational. So if you hear any of the telemetry, please let us know.

We are also working to get the voice repeater set up on ISS to downlink SuitSat audio on 437.80 in the event that the ISS Kenwood radio can receive the SuitSat transmissions. The repeater may be operational as early as mid-day Sunday. Please do NOT transmit on 145.99, voice or packet, until we have confirmed that SuitSat is no longer transmitting. These transmissions interfere with our ability to hear SuitSat.

While the transmission part of the SuitSat experiment has not been stellar, SuitSat-1 has been tremendously successful in several areas. Some of these successes include:

-We have captured the imagination of students and the general public worldwide through this unique experiment.

-The media attention to the SuitSat project represents one of the biggest ever for amateur radio.

-We have had well over 2 million internet hits on www.suitsat.org today.

-Our student's creative artwork, signatures and voices have been carried in space and are on-board the spacesuit--the students are now space travelers as the Suit rotates and orbits the Earth.

-Carried in the spacesuit CD are pictures of Roy Neal, K6DUE, and Thomas Kieselbach, DL2MDE, two of our colleagues who have contributed to the ARISS program and have since passed away.

-We successfully deployed an amateur radio satellite in a Spacesuit from the ISS, demonstrating to the space agencies that this can be safely done.

-This ARISS international team was able to fabricate, test and deliver a safe ham radio system to the ISS team 3 weeks after the international space agencies agreed to allow SuitSat to happen. This was a tremendous feat in of itself.

SuitSat-1/Radioskaf is a space pioneering effort. Pioneering efforts are challenging. Risk is high. But the future payoff is tremendous. As you have seen, we have not had total success. But we have captured the imagination of the students and the general public. And we have already learned a lot from this activity. This will help us and others grow from this experience.

Keep your spirits up and let's continue to be optimistic. And please keep monitoring!!

73, Frank H. Bauer, KA3HDO
ARISS International Chairman
AMSAT-NA VP for Human Spaceflight Programs

[ANS thanks Frank Bauer, KA3HDO, AMSAT-NA VP for Human Spaceflight Programs for the above information]

SB SAT @ AMSAT $ANS-036.02
Commemorative SuitSat QSL Certificate Will Be Available

AMSAT News Service Bulletin 036.02
From AMSAT HQ SILVER SPRING, MD.
February 5, 2006
To All RADIO AMATEURS
BID: $ANS-036.02

Students, scouts, teachers, ham radio operators, and the general public are encouraged to track the space suit, hear the conversations from space, copy the suit telemetry and capture the picture.

There will also be a special endorsement on the award certificate for those students who receive the "special words" that are embedded in the messages from our SuitSat student "crew members." These special words are in different languages - English, French, German, Spanish, Russian, and Japanese. You are encouraged to record the SuitSat downlink audio and get help from fellow students who know these languages.

Radio Amateurs, students and teachers who hear SuitSat should send their signal reports with a large (9x12 inch) self-addressed stamped envelope to one of these addresses listed below:

* USA: ARRL Headquarters
SuitSat QSL
225 Main Street
Newington, CT 06111-1494 USA

* Canada: Radio Amateurs of Canada
SuitSat QSL
720 Belfast Road
Suite 217 Ottawa Ontario K1G 0Z5

* Europe: F1MOJ - Mr CANDEBAT Christophe
SuitSat Europe QSL Manager
7 Rue Roger Bernard
30470 AIMARGUES FRANCE

* Japan: SuitSat Japan QSL
JARL International Section

Tokyo 170-8073 JAPAN

* Russia: Alexander Davydov, RN3DK
Novo - Mytishchinsky prospekt 52 - 111
Mytishchi 18
Moskovskaya obl. 141018, RUSSIA

* Other Countries: Please use the US or Canadian address above.

Also included in this spacesuit is a computer Compact Disk (CD) with images of over 300 items collected from schools and educational organizations around the world. These include creative works of art from students as well as student signatures, school or scout logos, and class or group pictures. Students, schools and educational organizations that participated in the development of this disk earlier this year will all be part of the SuitSat spacewalk---as their creative works, signatures and pictures all float in space!

[ANS thanks the ARISS team for the above information]

ARISS Status January 30, 2006

AMSAT News Service Bulletin 036.04
From AMSAT HQ SILVER SPRING, MD.
February 5, 2006
To All RADIO AMATEURS
BID: $ANS-036.04

1. New York Contact Successful

On Tuesday, January 24, Aquebogue School in Aquebogue, New York experienced a successful contact with the ISS. Bill McArthur, KC5ACR, answered 20 questions asked by ten students. Video was fed to three other local school districts via a local videoconferencing network. The weekly Aquebogue newspaper, News-Review, covered the event.   Echolink had 38 connections from 11 countries: Australia, Canada, USA, UK, Japan, Iraq, Italy, Russia, Spain, New Zealand, and Thailand. IRLP received 24 connections from the USA, UK, Canada, and Australia. The audio was also streamed on: www.discoveryreflector.ca

2. West Point Contact Successful

Cadets from the Ham Radio Club at the United States Military Academy in West Point had the privilege to speak with Bill McArthur, KC5ACR, on Thursday, January 26. Among the dignitaries attending the event was the Electrical Engineering program director, Colonel Barry Shoop. Professors from other departments who advise some of the cadets who questioned McArthur in a study of lunar habitation requirements also attended. The school has 4000 members, many of whom listened to the contact via local closed circuit (intranet).

3. Upcoming School Contacts

Dale High School in Dale, Oklahoma has been scheduled for an ARISS contact. It will take place on February 7 at 14:56 UTC.

E.L. DeGolyer Elementary School in Dallas, Texas has been approved for a contact with the ISS. It is planned for February 7 at 16:32 UTC.

Pine Ridge Middle School in Naples, Florida has been scheduled for a contact on February 8 at 15:24 UTC.

4. "Discover Engineering Family Day" Contact

"Discover Engineering Family Day" will be held on Saturday, February 18 in the National Building Museum in Washington, D.C. Arrangements are being made for a contact via Amateur Radio with astronaut Bill McArthur for the morning of the 18th (11 am ET).

5. ARRL Article on Georgia, New York Contacts

ARRL ran a story covering the Georgia Tech and Aquebogue School contacts. The article, "Onboard Fires, Safe Grounding Question Topics for NA1SS School Contacts," may be found on its website. See: http://www.arrl.org/news/stories/2006/01/27/2/?nc=1

6. SuitSat Interest Ramped Up

Interest in SuitSat was on the increase last month. The SuitSat website, http://www.suitsat.org received over 105,000 hits in January, coming from over 350 referring sites.

7. McArthur Closes in on DXCC Award

Bill McArthur continues to work DXCC (100 international contacts) entities. As of January 29, it was reported that he has worked 91 of the 100 entities needed for the DXCC award. ARRL covered McArthur's accomplishments in an article entitled, "ISS Commander Completes WAS from Space, Gaining On DXCC."

See: http://www.arrl.org/news/stories/2006/01/26/2/?nc=1

SB SAT @ AMSAT $ANS-036.05
First U.S. Satellite Launched 48 Years Ago

AMSAT News Service Bulletin 036.05
From AMSAT HQ SILVER SPRING, MD.
February 5, 2006
To All RADIO AMATEURS
BID: $ANS-036.05

Forty eight years ago a team of scientists and engineers successfully launched Explorer 1, the first U.S. satellite to orbit around Earth. This historic accomplishment marked the nation's debut in the Cold War-era space race and set the stage for the establishment of the civilian space agency that would become NASA.

NASA's Jet Propulsion Laboratory, Pasadena, CA, was still operated as a research laboratory for the U.S. Army when it was selected in November 1957 to develop the first U.S. satellite, its science package, the communications system and the high-speed upper stages for the Army's Redstone rocket that would guide the tiny, 9-kilogram (20-pound) Explorer 1 into the great unknown. JPL and the Army completed the assignment and successfully launched the satellite in less than three months. JPL and the Army Ballistic Missile Agency, based in Huntsville, AL, joined in firing the satellite toward space from the missile test center at Cape Canaveral, FL on Jan. 31, 1958.

The scientific experiment onboard, a cosmic ray detector built by Dr. James Van Allen of the University of Iowa, soon returned one of the most important findings of the space program: the discovery of what are now known as the Van Allen Radiation Belts around Earth.

Explorer 1 went on to operate for three months.

SB SAT @ AMSAT $ANS-036.07
A Personal Note from This Week's ANS Editor

AMSAT News Service Bulletin 036.07
From AMSAT HQ SILVER SPRING, MD.
February 5, 2006
To All RADIO AMATEURS
BID: $ANS-036.07

One of the proudest moments of my 40-plus years in amateur radio came during the recent EVA of ISS Expedition 12. To watch and listen as Bill McArthur, KC5ACR, talked about amateur radio while working in the vacuum of space was truly an inspiring moment. For those who missed it, Bill talked for several minutes with CAPCOM Mike Foale about the 96 countries he has worked and the 1,000 contacts he has made from space.

Those of us who have been around this hobby remember when Owen Garriot, W5LFL became the first ham in space in the culmination of many people's efforts -- through the SAREX program -- to make amateur radio in space a reality. Today we have ARISS and ambassadors of amateur radio like Bill McArthur.

A personal note of thanks to all the people and organizations -- ARISS, AMSAT, ARRL and NASA -- who continue to support amateur radio in space and a big thank you to Bill McArthur for making amateur radio such a big part of Expedition 12.

[ANS thanks NASA TV for the above-mentioned live coverage]

If you receive the "repeated" signal, that is no big deal. People have been listening to the ISS for years on two meters.

Only a relatively few people have picked up the signals coming from the Space Suit.

Probably the little rubber ducky it came with.

But, yes, with 11 elements and good front end sensitivity (not a scanner), the suit signal is still barely out of the noise. Then, again, EME signals are usually much weaker than the suit signal, and I believe Sam Harris, W1FZJ, was doing EME around 40 years ago - with tubes. It's not like it takes $10 million worth of equipment to do this - 2 broom handles, some 1X2 lumber, 2 U-bolts, some coax and some copperweld wire (or wire hangers) shouldn't cost more than US$10 - but a 5 or 6 element quad has a lot of gain and it's easy to swing around by hand.

>dude it's broadcasting less than 1/2 watt from what 100 miles up? Ain't no
>way a normal person gonna hear that.

If it is putting out 1/2 watt (+27 dBm) uniformly in all directions (0 dBi transmit antenna)
and is 400 miles away, and your little rubber duck is about a 0 dBi antenna (probably close),
your receiver will receive it at -105 dBm. That should be quite easy to receive.

Most likely the antenna on the suit is *not* putting the signal out in all directions.
You may also want to hear it for more than the minute or so it is going directly over you.

Oh, a "normal person" can easily build better antennas and hook them up.

Alan

oh well you'll pick up sweet FA on that. Ya gotta have the metal in the sky barky, loadsa metal going up and up....
then you'll hear things. I've got a hand held as well but it doubles as a powerful little base station when it sits on my desktop
connected to my external aerial and PC.

Well, there you go. If you have an outside aerial, then you should have no problem hearing it. You don't need anything too powerful, if the suitsat is still working. However, I think NASA says that the batteries have probably frozen, so it isn't working any longer.

Hi Hamguy,
I didn't write this to upset anyone. I read the forum link you sent but didn't see anyone say the batteries had died yet. I might have just missed it though.
If I did, my apologies.
I myself will only believe it's dead when either Amsat or NASA says so. Other than that, it's just conjecture and results of the initial erroneous reports that it died after the second orbit as was reported by the media. After that report, everyone was speculating the batteries had died until there were reports of received audio days after it was supposed to have been dead.

Here's the most recent report from Amsat updated yesterday.....

http://www.amsat.org/amsat-new/index.php

And the recordings that were made today (Feb 8 2006 1007UTC) by VE6BLD in Canada ....

http://www.amsat.org/amsat-new/index.php

Thanks,
RoD

yes..but amateurs are not normal.

who in their right mind would ''play with radios'' for a third of their
life and more than likely pose for a photo or two in front of a room full
of equipment better suited to filling in the foundations of a garage ?

:-)

I'll second that! Orbitron is a KILLER tracking program.
Sebastian Stoff did a great job with this program. It even auto updates the
keps and syncs the time on your computer.
All he asks is a postcard from your area as payment.
Just Awesome.

Rod

Downlink 435.300 mhz FM
9k6 Digital, V/U, PBP BBS (Pacsat Broadcast Protocol BBS)
Uplink: 145.860 mhz FM, 9k6 PBP Digital
Downlink: 435.150 mhz FM, 9k6 PBP Digital

AO-51 Special Event - JOTA Weekend 15-16 Oct

The annual Boy and Girl Scouts "Jamboree on the Air" Amateur Radio event

is scheduled for 15 and 16 October 2005. As this is an International Scouting event, amateur radio stations around the world are invited to participate.
The AO-51 command team is scheduling the satellite for exclusive use by the Scouts, and Satellite operators communicating with the Scouts, for this weekend. Please allow the Scouts the opportunity to make as many contacts as possible via AO-51 during this short time period. Base stations, please remember that most of the JOTA stations will be portable, so please use minimum power. The official times for the JOTA event will be from 1200 UTC on October 15 until 1200 UTC on October 17, 2005.

For the JOTA weekend, AO-51 will be configured in the Dual FM repeater mode.
This will provide two independent FM repeaters (separate uplink and downlink frequencies) for use over the weekend. Both repeaters will be for use by the JOTA activity. This mode will run Monday through Friday before the event to allow amateur satellite stations to familiarize and test this mode. The configuration of the satellite frequencies for this mode is listed below.

AO-51 FM repeater #1
Downlink: 435.300 MHz
Uplink: 145.920 MHz with 67hz PL Tone

AO-51 FM repeater #2
Downlink: 435.150 MHz
Uplink: 145.880 MHz with NO PL Tone

Here are some web links for information on the JOTA weekend activity.
http://www.arrl.org/FandES/ead/jota.html
http://www.arrl.org/FandES/ead/ideas.html
http://www.scouting.org/international/jota.html

If your local club has a JOTA activity planned for the weekend please consider volunteering your services to provide a satellite communication station for the event.

Thanks for your support and participation.

[ANS-WSR thanks Mike Kingery, KE4AZN for the above information]
[09252005]

=====

SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that SO-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz. The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10 minute timer.

[09122004]

=====

FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

John, N4QWL reports on July 16th, 2005:

Last evening I had a AOS to LOS qso with WI2W. FO-29 came up at 01:17z here in FM07 and I found WI2W and we chatted until 01:33z. The satellite was at 2 degrees elevation when I finally heard him start to crackle a bit. What a great QSO! To think that I watched this bird launch back in 1996 and it is still working so well is a real thrill. I believe I still have the video. I might just look for it and watch it again. Boy do I love this satellite stuff! Look for you all up there.

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will automatically analyze all digital telemetry from the satellite (such as current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[ANS-WSR wishes to thanks John, N4QWL for this week's report]

=====

AO-7 AMSAT OSCAR 7
Catalog number: 07530
Launch Date: November 15, 1974

Status: Semi-operational in sunlight.
Return to active status: June 21,2002

Uplink: 145.850 to 145.950 MHz CW/USB Mode A
            432.125 to 432.175 MHz CW/LSB Mode B
Downlink: 29.400 to 29.500 MHz CW/USB Mode A
            145.975 to 145.925 MHz CW/USB Mode B
Beacon: 29.502 MHz, 145.972 MHz, 435.1 MHz, 2304.1 MHz

Emily, W0EEC has created a website to allow the users of AO-7 to record contacts, observations and use of the satellite more effectively at:

http://www.emilyshouse.com/experthams/ao7/main.php
This includes the ability to log contacts.

Tim, K3TZ has written a program to decode AO-07 telemetry.
The program can be downloaded at:
http://www.qsl.net/k3tz/files/K3TZ_AO-07_Telemetry_Decoder_0.5.zip

For more AO-7 info:
http://www.amsat.org/amsat/sats/n7hpr/ao7.html

=====
INTERNATIONAL SPACE STATION (ISS) - ARISS
Catalog number: 25544
Launch date: November 20, 1998

Status: Operational
Current Mode: U/V CROSS-BAND REPEATER
Digipeater: Inactive

The current Expedition 11 crew is:
Commander Sergei Krikalev
Flight Engineer John Phillips

Worldwide packet uplink: 145.990 MHz FM
Region 1 voice uplink: 145.200 MHz FM
Region 2/3 voice uplink: 144.490 MHz FM
Worldwide downlink: 145.800 MHz FM

Repeater Uplink: 437.800 MHz FM
Repeater Downlink: 145.800 MHz FM
Doppler Shift is 10 KHz

Russian callsigns: RS0ISS, RZ3DZR
USA callsign: NA1SS
Packet station mailbox callsign: RS0ISS-11
Packet station keyboard callsign: RS0ISS-3
Digipeater callsign: ARISS

This from Frank Bauer, KA3HDO:
The SSTV system will be installed inside the Service module as an
integral
part of the ARISS ham radio system. It will transmit and receive (JPG)
still images from the International Space Station in a format called
Slow
Scan TV (SSTV). When fully operational, the SSTV system is capable of
sending up to 480 images per day from ISS.   It will also be able to
receive images from amateur radio stations on Earth. This system will
utilize the already installed Kenwood D-700 radio and the ARISS
antennas
mounted on the Service Module. The SSTV equipment flown on Progress
19P
includes the SpaceCam software, a radio/computer interface module, and
data

cables. The dedicated laptop for SSTV operations will be launched on a subsequent Progress vehicle

This off the ARISS webpage:
< http://www.rac.ca/ariss/oindex.htm#New%20ARISS%20Operations >:
The ARISS program is pleased to announce that the amateur radio equipment
aboard the International Space Station is now operating in cross-band repeat
mode. We realize that many of you will miss the packet-operating mode. How-
ever, cross-band repeat allows further experimentation of the ISS amateur
radio system

The downlink for this operating mode remains the same, so listen for the station on 145.80 MHz. The new uplink frequency is 437.80 MHz. All frequencies are subject to Doppler shifting. For further information on working
satellites and adjusting for Doppler shift, please review Emily Clark's (W0EEC) excellent presentation on AMSAT's website:
http://www.amsat.org/amsat-new/information/faqs/Intro_sats.pdf

The ISS daily crew schedule can be found at:
http://spaceflight.nasa.gov/station/timelines/
Remember that the crew operates on UTC time. Also, all of the time line is
NOT translated from Russian and posted.

WSR 275 Part 2 10/02/2005

AMSAT NEWS SERVICE BULLETIN 275.S2 FROM AMSAT HQ
SILVER SPRING, MD, OCTOBER 02, 2005
TO ALL RADIO AMATEURS
BID: $ANS-275.S2

PCSAT2 ?0-??
Catalog Number:
Launch Date: August 1, 2005

Status: Operational

PCSAT2 was installed on the exterior of the International Space Station and was activated on August 3, 2005.

PCSAT2 CAPABILITIES: PCSAT2 is attached to the ISS and so its operations must be in cooperation with the ARISS communications suite to minimize any mutual interference and to coordinate activities. Here are the capabilities of the PCSAT2 and ARISS payloads:

PCSAT SYSTEM A:

435.275 PCSAT2 DOWNLINK 1200 baud packet with uplink on 145.825
435.275 PCSAT2 DOWNLINK Occasional user PSK-31 continuous downlink
145.825 PCSAT2 DOWNLINK 1200 baud packet
PCSAT SYSTEM B:

437.975 PCSAT2 DOWNLINK periodic Solar Cell data and PCSAT2 telemetry at 9600 baud
437.975 PCSAT2 DOWNLINK TNC-B command downlink at 1200 baud
437.975 PCSAT2 DOWNLINK User Voice Repeater with VHF uplink
437.975 PCSAT2 DOWNLINK Packet digipeater with VHF uplink

It looks like PCSAT2 can best contribute at this time by operating in PSK-31 mode for the near future. This is a very exciting new transponder mode which solves the congestion problem on FM repeaters by letting multiple stations all communicate at the same time.

PSK-31 users are welcome to try out the new PCSAT2 PSK-31 transponder on ISS with an uplink on 29.402 +/- 1 KHz and downlink on 435.275 +/- Doppler using FM.

The FM downlink lets everyone operate full duplex and everyone to see the same view of the passband as everyone else. THus you can see exactly what your signal looks like to everyone else.

Help Wanted:

Here is your chance to become a viable part of the Amateur Satellite Community.

We are looking for a volunteer satellite packet station in Hawaii that is interested in helping with telemetry and sat-gating of PCSAT2 and ARISS packets. Requirements are:

1) General familiarity with packet
2) TNC connected to a cross band radio that
   can RX on UHF and TX on VHF.
3) modest UHF beam and rotator system.

Contact WB4APR for more information.

Packets seen from PCSAT2 can be reviewed at:
http://www.findu.com/cgi-bin/pcsat2.cgi

A screen shot of both the 9600 bps and 1200 bps decoded data
as seen by Simon, 9W2QC, can be seen at:
http://www.9w2qc.net/pcsat2/

More information on PCSAT2 can be found at:
http://web.usna.navy.mil/~bruninga/pcsat2.html

[ANS-WSR thanks Bob, WB4APR and the U.S. Naval Academy Satellite Lab for
the aboveinformation.]

=====

CUTE-1
Catalog number: 27844
Launched: June 30,2003

Status: Operational

```
Uplink:          ?
Downlink:     436.8375 CW
              437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ? )
```

Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as OPERATIONAL?
Indeed it is very operational as a CUBESAT sending CW telemetry on 436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:

```
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6
```

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for
Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at 14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz. Initial orbital parameters were period 101.4 min, apogee 831 km, perigee 819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

[ANS WSR wishes to thank Cliff, K7RR, for this week's information]

=====
UO-11 OSCAR-11
Catalog number: 14781
Launched: March 1, 1984

Status: Semi-operational?

```
Telemetry Downlink: 145.826 MHz. FM (1200-baud AFSK).
                    approx. 10 days ON, 10 days OFF
Mode-S Beacon:      2401.500 MHz. ... OFF
UHFBeacon:          435.025 MHz. ...  OFF
```

OSCAR-11 is back! I received the good news, on Saturday morning, while at the AMSAT-UK Colloquium. This was entirely unexpected! On Sunday morning Bob G4VRC played me a recording of an early morning pass received that day.

During the period 21 July to 14 August 2005 consistent signals have been heard from 30 July to 08 August. Signals seem to be weaker than usual, confirmed by the many reports received. However,since I last heard the satellite on 30 April, I've reinstalled my antennas , which makes comparisons difficult.

Many thanks for all the recent reports of OSCAR-11 including those from KU7Z (who heard it first), KB2M, VK6XH, HK7MKE, KA2UPW, JE9PEL, G1OCN, HB9SKA and G8OQW.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working. One bit in channel 62, DSR mode, has changed from WRITE to READ. DSR is the Digital Store & Readout experiment. This could be significant if the experiment is still drawing current, but the other status bit indicates that it is switched OFF.

The on-board clock is now showing a very large error. It has lost approximately 19 days since 30 April. During the recent data collection period, the clock error has been changing at a decreasing rate. The size of the clock error and the rate at which it is changing is similar to the duration of the solar eclipse periods. This suggests that the clock might have been switching OFF during eclipses.

The eclipses have now ended, and the satellite should be in continuous sunlight for the remainder of this year, and well into next year. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures.

If the watchdog timer is still operating on a 20 day cycle, ie. approximately ten days ON followed by 10 days OFF, then the VHF beacon should resume transmissions around 18 August.

The Beacon frequencies are -

VHF 145.826 MHz. AFSK FM ASCII Telemetry

UHF 435.025 MHz. OFF

S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is www.users.zetnet.co.uk/clivew/

If you place this bulletin on a terrestrial packet network, please use the bulletin identifier $BID:U2RPT112.CWV, to prevent duplication.

[ANS-WSR thanks Clive, G3CWV, for the above information]

AMSAT NEWS SERVICE BULLETIN 275.S3 FROM AMSAT HQ
SILVER SPRING, MD, OCTOBER 02, 2005
TO ALL RADIO AMATEURS
BID: $ANS-275.S3

THE FOLLOWING ARE IN ORBIT BUT ARE
NON-OPERATIONAL AT THIS TIME:

POSAT-1 PO-28
Catalog Number: 22829
Launched : September 25, 1993

Status: Operational - Not open for Amatuer use

Downlink: 435.250 MHz
          435.275 MHz

Uplink: 145.925 MHz
          145.975 MHz

Broadcast callsign: POSAT1-11
BBS callsign: POSAT1-12

PO-28 (POSAT-1), Portugal's first satellite, launched 12 years ago, will be turned over to Amateur Radio use in the very near future. That was the word July 30 from AMSAT-UK Secretary Jim Heck, G3WGM, during the AMSAT-UK International Space Colloquium in Guildford, England.

Launched September 25, 1993, the satellite operated as a packet store-and-forward BBS (9600 baud FM FSK) on Amateur Radio frequencies for several weeks in early 1994. Over the years, PO-28's primary usage has been commercial, although plans have called for eventually shifting its operation to ham radio use. G3WGM reports that following lengthy negotiations it has been agreed that the satellite can be switched permanently to amateur frequencies. The changeover is expected to take a couple of weeks.

The Portuguese satellite was built at the University of Surrey as part of a collaborative satellite technology program that involved industry and academe. Uplink frequencies will be 145.925 and 145.975 MHz. Downlink frequencies will be 435.250 and 435.275 MHz. More information on PO-28 is on the AMSAT Web site http://www.amsat.org/amsat/sats/n7hpr/po28.html.

Uplink Frequencies: 145.925 and 145.975 MHz
Downlink Frequencies: 435.250 and 435.275 MHz

Orbit: 822 x 800 km, 98.6 deg inclined, sun-synchronous.

Transponder capabilities include FM repeater and 38k4 data. If you want to hear how loud this satellite is, listen on 429.950 until the change back to amateur radio service.

Keplerian elements for PO-28 are not currently contained in the AMSAT keps bulletins, but can be found at Celestrak in amateur.txt using the name "POSAT". Users of Space Track should query the NORAD Satellite ID number 22829. The name listed by Space Track is "EYESAT A".

More information of POSAT-1 can be found at:
http://www.ee.surrey.ac.uk/SSC/CSER/UOSAT/missions/posat1.html
http://www.amsat.org/amsat/sats/n7hpr/po28.html
[ANS-WSR wishes to thanks Trevor, M5AKA and Jim, G3WGM, for this week's information.]

=====

AO-10 OSCAR 10
Catalog number: 14129
Launched: June 16, 1983

```
Status: Non-operational

Uplink:   435.030 to 435.180 MHz CW/LSB
Downlink: 145.975 to 145.825 MHz CW/USB
Beacon:   145.810 MHz (unmodulated carrier)

AO-10 has been locked into a Mode-B, 70-cm uplink and
2-meter downlink for several years.

W4SM has more information about the satellite at the following URL:
http://www.cstone.net/~w4sm/AO-10.html
[05092004]
=====
IO-26 ITAMSAT
Catalog number: 22826
Launch Date: September 26, 1993

Status: Non-operational

Uplink:             145.875 145.900 145.925 145.950 MHz FM (1200-baud)
Downlink:           435.812 MHz SSB
Broadcast Callsign: ITMSAT-11
BBS:                ITMSAT-12

Alberto E. Zagni - I2KBD reports on 02/13/05
The spacecraft is in MBL (safe mode) and is trasmitting just 6 channels
of telemetry. Temperatures and voltage are nominal, but there seems to
be a problem with the onboard receiver, refusing to accept commands.
The spacecraft was launched in 1993, thus nearing 12 years in orbit...

Best regards
Alberto E. Zagni - I2KBD
ITAMSAT Mission Director

More information of IO-26 can be found at:

http://joshua.micronet.it/english/itamsat/itamsathome.html

=====
PO-34 PANSAT
Catalog number: 25520
Launched: October 30, 1998

Status: Telemetry downloads only

Uplink/downlink frequency (listed on the PanSat web site) 436.500 MHz

The satellite is not available for general uplink transmissions.

The Naval Postgraduate School developed PanSat. At the time of launch, PanSat spread-spectrum digital transponders were to be available to Amateur Radio operators along with software to utilize this technology.

The satellite is still operating, however, the spread spectrum packet radio portion never took place. The spacecraft is now beyond it's initial 2-year mission life, but telemetry records are still being downloaded.

For more information, visit the official PanSat web site at:
http://www.sp.nps.navy.mil/pansat/
[05092004]
=====
SO-33 SEDSAT-1
Catalog number: 25509
Launched: October 24, 1998

Status: Semi-operational

Downlink: 437.910 MHz FM (9600-baud FSK)

The satellite is not currently available for uplink transmissions and the image and transponder recovery efforts have been unsuccessful.

For more information on SedSat-1 visit the satellite web site:
http://seds.uah.edu/projects/sedsat/sedsat.htm

[ANS has no further information]
[05232004]
=====
SO-35 SUNSAT
Catalog Number: ?
Launched:February 23, 1999

```
STatus: Non-Operational

Downlink: Mode B Repeater: 436.291 MHz
          Mode J Digipeater: 436.250 MHz

Uplinks: Mode B Repeater: 145.825 MHz
         Mode J Digipeater: 145.825 MHz and 145.900 MHz

=====
AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small
German
scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS
```

e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio anand telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at: http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

BID: $ANS-275.S4

THE FOLLOWING SATELLITES ARE NOT IN ORBIT BUT ARE PROPOSED FOR LAUNCH AT THIS TIME:

UCISAT ?O-??
Catalog number:
Proposed Launch Date: October 31, 2005

Status: Under Construction

Downlink: Submission in Progress
Uplink: Submission in Progress
Callsign: Submission in Progress

This from Matt Bennett, KF6RTB, UCISAT Communications Team Member:

Our website is www.ucisat.net .This is a new website, however, and doesn't have the "Status" section active yet. Because of the growing interest in

our
project, I'll push our webmaster to create updates (hopefully) on a
week-to-
week basis. For now, the current status of the mission is as follows:

-Expected Launch Date: October 31st, 2005
-Frequency Allocation: Submission in Progress
-Construction Status: Sub-Assembly
[WSR to thank Matt Bennett, KF6RTB, for this week's report.]
[01302005]
=====
SSETI ?O-??
Catalog Number:
Proposed Launch Date: LATE 2005

Status: AWAITING LAUNCH

Graham, G3VZV reports:
Dear all,

Unfortunately we have just learnt that we have an INDEFINITE launch
delay.

This is due to one of the spacecraft on the launch, "SINAH", having
suffered
a significant failure and not being ready to fly.

Early indications suggest that we have a delay of at least one month,
but
this is not confirmed.

The launch campaign team will make the spacecraft and the ground support
equipment safe and then come home.

This is, of course, very unfortunate, but it is not critical! The
spacecraft
can easily wait for the new launch date without any significant
problems,
and we will fly it as soon as we can.

In the meantime please cancel all arrangements for your national launch
events.

We'll get there eventually.

Watch this space...

Neil

SpaceDaily has a report about SSETI at:

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live
radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz.
Pre-net operations start at 18:00 UTC, with current ANS bulletins trans-

mitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
        888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satelite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:

International Space Station School Contacts on Oct 5th, 6th 7th

Ham radio ISS school contacts
ARISS Contacts on October 5th, 6th and 7th
Listen to the contacts 'live' on Echolink join the Amsat conference room number 101377
The International Space Station's Expedition 11 crew may be winding down. However, their ARISS school contacts will be very active this week with 3 scheduled sessions.

Each session will be a telebridge conducted in English.
Sessions will be held on:

5 October 16:59 UTC -- Princeton High School, Princeton, New Jersey
6 October 15:07 UTC -- Ft Hamilton High School, Brooklyn, NY
7 October 13:33 UTC -- Ridgefield Park High School, Ridgefield Park, NJ

Princeton High School, Princeton, New Jersey

Station NN1SS in Greenbelt, MD will call NA1SS at approximately 16:59 UTC.

"Princeton High School is a nationally recognized high school listed frequently in various publications denoting outstanding academic achievement. Princeton High School students excel in the humanities, the fine arts, and the sciences with students performing in Smetana Hall in Prague and competing with the US Physics Olympic Team in Seoul, South Korea. The student body is a diverse group representing a wide range of interests and backgrounds within a school community in which 17% of our students claim one of 38 languages other than English as their first language."

Students will ask as many of the following questions as time allows:

1. Are the shapes of the continents as defined as they appear on maps and globes?
2. How much less time will pass in the ISS than on Earth, due to relativity?
3. If it weren't for family and friends, would you want to return to Earth?
4. What are the day-to-day jobs of the space station?
5. How do you sleep?
6. What is the worst situation you've encountered in space?
7. What luxury do you miss the most?
8. How fast did you travel to exit the earth's atmosphere?
9. How would you describe space when you look outward? If you space walked, what went through your mind the first time the airlock opened and you saw space?
10. What does weather look like from space? For instance, could Hurricane Katrina be seen moving?
11. Can you really see landmarks such as the Great Wall of China from space?
12. How often do people get space sickness in the ISS?
13. When you come back, what will you miss most?
14. How much of the day is left to yourself and for sleeping?
15. How much bone and muscle mass will you have lost through out your trip? How would it be if you went to Mars for 3 months?
16. What is good or the best on the menu?
17. When were you first interested in space travel?
18. What about space intrigues you and that you do not understand? What have you been able to learn in your travels as of yet?
19. My brother wants to be an astronaut. What advise can you give him?
20. How does your body feel in low gravity? Can you feel the effect? Is it like floating?

Ft Hamilton High School, Brooklyn, NY

Station VK5ZAI in Kingston SE, South Australia will call NA1SS at approximately 15:07 UTC.

"Fort Hamilton High School is large urban public school of
5000 students in a suburban setting of Bay Ridge,
Brooklyn. Our school reflects the ethnic diversity of New
York City. We have strong academic programs geared towards college
preparation, with
advanced placement and honors classes in all disciplines. Our
communication with will
benefit our student population, especially the astronomy classes."

Students will ask as many of the following questions as
time allows:

1. What motivated you to go into space?
2. Did your journey so far fulfill your expectations? Why or why not?
3. How long did you have to train to prepare for your space flight? What was the most difficult part of your training?
4. How is the training you received actually different than traveling into space?
5. How long will you stay at ISS? What type of work will you be involved with?
6. If you could change one thing about your space mission, what would it be?
7. Besides your family and home, what do you miss the most about Earth?
8. How do you spend your free time at the ISS?
9. Do astronauts have to do daily exercises and what type?
10. How long does it take to reach the ISS? How fast is the shuttle moving after you leave the atmosphere?
11. How are basic life functions like sleeping and digestion affected by the zero-gravity environment at ISS?
12. How are medical problems such as illness or breaking a bone dealt with in space?
13. How would you fight a fire in a zero gravity environment?
14. Are there any plants or animals on the ISS being experimented on? What type of experiments?
15. Is the supply of oxygen on the ISS constantly being supplied or is there a machine that produces it?
16. How do you prepare for a space walk? and what special precautions have to be taken?
17. Does cosmic radiation affect you during your time in space?
18. Do you believe in the existence of other intelligent life forms in the universe?
19. What do you eat at the ISS? and How?
20. How many astronauts fit in the ISS?

Ridgefield Park High School, Ridgefield Park, NJ

Station ZS6BTD in Parklands, South Africa will call NA1SS at approximately 13:33 UTC.

"Ridgefield Park Junior-Senior High School is a 7-12 school of approximately 1,100 students located in Southeast of Bergen County. The school is a receiving district for 9-12 grade students from Little Ferry, a community that borders south west of Ridgefield Park, just across the Hackensack River."

"The school has a proud history that includes some rather famous graduates. Among them Ozzie Nelson of Ozzie & Harriet fame and Bud Lewis, the copilot of the Anola Gay which dropped the atomic bomb on Hiroshima, which signaled the end of World War II. It is also the proud alma mater of Greg Olsen."

Students will ask as many of the following questions as time allows:

1. I have read that you plan to use your company's miniaturized infrared imager to observe Earth's atmosphere and agricultural crops on this trip. What do you plan to do with this information and how do you foresee it will help us in the future?
2. Why are you turning the infrared camera toward space, and what do you hope to accomplish?
3. What new products do you foresee as the result of the experiments conducted on this mission?
4. Sapna and I won a national chemistry competition based on our ideas for the development of a transdermal nutrient patch. Is anything like this currently being used in the space program or do you foresee its use in the future?
5. I understand that there are three biological experiments for the European Space Agency. Could you please briefly describe them?
6. Can you explain the scientific significance of the experiment on crystal growth in space?
7. Could you explain the significance of the experiments that will test small free-flying satellites, as part of a project called SPHERES?
8. Why is space such a good place to conduct experiments in cell research?
9. Which of the jobs that you performed on board did you like the most and why?
10. Please describe any geographical or man-made features on the Earth that you can see from space.
11. Have you seen any storms like hurricanes or tornadoes from space? What do they look like?
12. What type of problems have you encountered in the space station and how have you solved them?
13. What is the role of Expedition 12?

14. Dr. Olsen, why would a very successful business man and entrepreneur like you want to travel into space?
15. How will this opportunity to experiment in space benefit others (adults, children)?
16. How different do such celestial bodies as the sun, the moon, and any of the planets look from space as compared to how they look from Earth?
17. What would have happened if anyone had gotten seriously sick during the trip?
18. Was all your training in English or did you have to learn Russian to be involved in the program?
19. Do you see yourself as being involved in the U.S.A. space program someday?
20.What are your plans when you return from this Russian mission?

As always, the ISS will be audible to anyone listening in on the 145.80 MHz downlink. Please note, since these are telebridges the ground stations will NOT be near the school that is contacting the ISS.

Please note, the amateur equipment on the ISS will be turned off prior to the beginning of the contact. It will be returned to service as quickly as possible.

Upcoming ARISS events can be found at
http://www.amsat.org/amsat/ariss/news/arissnews.txt
The next scheduled event is with students at Princeton High School, Princeton, New Jersey on Wednesday, 5 October 2005 at 16:58 UTC.

ARISS is an international educational outreach program partnering the participating space agencies, NASA, Russian Space Agency, ESA, CNES, JAXA, and CSA, with the AMSAT and IARU organizations from participating countries.
ARISS offers an opportunity for students to experience the excitement of Amateur Radio by talking directly with crewmembers on-board the International Space Station.

Teachers, parents and communities see, first hand, how Amateur Radio and crewmembers on ISS can energize youngsters' interest in science, technology, and learning.

Further information on the ARISS programme is available on the website

http://www.rac.ca/ariss (graciously hosted by the Radio Amateurs of Canada). Information about the next scheduled ARISS contact can be found at
http://www.rac.ca/ariss/upcoming.htm#NextContact.

AMSAT NEWS SERVICE
ANS-282

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:

ans-editor@amsat.org

In this edition:

* Initial Report From the AMSAT Meeting
* AMSAT President's Letter
* ARISS Status October 3, 2005
* New Launch Date for SSETI Express

* AO-51 Special Event - JOTA Weekend 15-16 October
* South Africa, Other African Nations to Build LEO Satellite Network

SB SAT @ AMSAT $ANS-282.01
Initial Report From the AMSAT Meeting

AMSAT News Service Bulletin 282.01
>From AMSAT HQ SILVER SPRING, MD.
October 9, 2005
To All RADIO AMATEURS
BID: $ANS-282.01

The AMSAT News Service caught up with Board Member Emily Clarke, W0EEC after the first day of the Annual AMSAT BoD meeting in Pittsburgh. Emily said, "This
is my first meeting as a member of the board, and I am very impressed at how unified the board is. The meeting has been focused on our top priority - to build and launch Eagle(s) - and the board has been very productive in identifying plan elements that will bring Eagle to orbit."

Emily continued with, "One challenge we face is fund-raising, which is difficult to do at an early stage of the project. Unlike previous efforts much
of the work, such as writing and testing software for the SDTX is intangible.
Fundraising is our biggest challenge, and I encourage every member to think of
creative ways we might meet our goal."

Emily described another key action of the Board being the elections of the Executive Team officers taking place this week. The Board will announce the results of these elections when the process is completed.

The AMSAT Annual Meeting followed on Friday, October 8, at 8PM.

Powerpoint slides from this meeting can be viewed on-line at:
http://www.amsat.org/amsat-new/articles/2005_General_Meeting/

If one is navigating from the http://www.amsat.org front page the steps are:
Navigator (main menu)
Current Articles
2005 General Meeting

We will upload additional presentations as they are reviewed and approved.

[ANS thanks Emily, W0EEC for the above information]

SB SAT @ AMSAT $ANS-282.02
AMSAT President's Letter

AMSAT News Service Bulletin 282.02

>From AMSAT HQ SILVER SPRING, MD.
October 9, 2005
To All RADIO AMATEURS
BID: $ANS-282.02

As I prepare for the series of AMSAT meetings that will take place in Pittsburgh this week I have been reviewing the accomplishments of the past year and the challenges of the coming year. I am pleased with the progress of AMSAT's organizational and infrastructure improvements and with the progress of the two satellite projects, P3E and Eagle. For the coming year I am committed to focus AMSAT's activities primarily on the completion and launch of P3E, the construction of the Eagle space frame and implementation of the Eagle Software Defined Transponders (SDX), at a minimum.

The changes in AMSAT's organizational structure have created many new opportunities for members to actively contribute to the growth and advancement of our organization. Our members are working on teams that are dedicated to areas of excellence such as finance and fundraising, marketing and field operations, technical and scientific, office management, external affairs, operations, human spaceflight, and record keeping. We have a great group of volunteers working in these areas and there is always room for more people.

Our infrastructure has improved in a number of ways, most notably the rollout and constant upgrade of AMSAT's new Web site and on-line store and the overhaul of our accounting practices. Other improvements are in process and will be brought on line as time permits such as the AMSAT Information Management System (AIMS) and member only services.

The P3E project is a very exciting one that holds great promise for the return of AMSAT to the benefits of high earth orbit satellites. This project is being led by AMSAT-DL, as have all the HEO satellite projects. AMSAT in North America is contributing substantial manpower and funding to P3E and is committed to the success of the project and to our close relationship with our good friends and colleagues in AMSAT-DL. I am personally a member of AMSAT, AMSAT-DL and AMSAT-UK.

The Eagle project is maturing to the point that we will soon be ready to build the space frame and start assembling some of the payload modules like the Internal Housekeeping Unit and the U/V and L/S software defined transponders.
Nearly all of the work that we are doing in support of P3E will also be used in Eagle so we will maximize the benefits of having cooperated on P3E. As with any new satellite design there are design issues and uncertainties. Let there be no mistake that these are normal and health parts of the design process as we balance the science, engineering, technology and mission

requirements for Eagle. The Eagle team is large, diverse and excited about what they are doing. New qualified volunteers are being added to the team on a regular basis. Status reports are appearing in every issue of the AMSAT Journal.

This coming year will be one of improved communication. There will be an effort to expand our communications beyond the official outlets, the Journal and AMSAT News Service. You will see more reports on the AMSAT-BB message board and we will improve the content and timeliness of the information on the AMSAT Web site, especially on the Eagle pages.

The annual membership meeting will be held Friday evening, October 7th, at 8:00 pm Eastern Time and is open to the membership. This meeting will be recorded and both audio and video will be placed on AMSAT servers soon after the meeting. The meeting will also be broadcast on the AMSAT EchoLink conference. If you have questions and cannot be there please submit them by e-mail (details to be announced on ANS). We may also be able to take questions from EchoLink's text messaging window, if we can get someone in the meeting to operate the computer.

AMSAT is an exciting and vibrant organization with a great deal to offer our members. No organization is perfect but we have a fabulous Mission and Vision and we are performing to those promises. I encourage those who need more information or clarification to gain a better understanding of what we are doing and why it is important and exciting to contact me or any of the other Board members and Officers. Contact information is on the AMSAT Web site at http://www.amsat.org/amsat-new/AboutAmsat/officers.php.

Rick, W2GPS
AMSAT President

SB SAT @ AMSAT $ANS-282.03
ARISS Status October 3, 2005

AMSAT News Service Bulletin 282.03
>From AMSAT HQ SILVER SPRING, MD.
October 9, 2005
To All RADIO AMATEURS
BID: $ANS-282.03

1. Tregaron School Contact Successful

On September 29, Tregaron High School (Ysgol Uwchradd Tregaron) in Tregaron, Ceredigion, Wales, U. K., experienced a successful ARISS contact. John

Phillips, KE5DRY, answered 18 questions posed to him by the 14 students and after the contact was lost, he gave answers to the two remaining questions the students had prepared, allowing other radio stations to hear the answers. Approximately 400 students, teachers and dignitaries witnessed the contact.

Audio of the contact is available on the ARISS-Europe website. See: http://www.ariss-eu.org/2005_09_29.htm

To view the BBC article online, see: http://news.bbc.co.uk/1/hi/wales/4292620.stm

2. ARRL Article on Expedition 12

On September 28, ARRL ran a web story on the new ISS crew. "ISS Expedition 12 crew, space tourist to launch October 1" may be found at: http://www.arrl.org/

3. Space Adventures Announces Greg Olsen's Flight Plans

A press release on Greg Olsen's flight and planned amateur radio contacts has been posted on the Space Adventures website. See: http://www.spaceadventures.com/media/releases/2005-09/283

4. Cosmonaut Greets IARU Conference Members

On September 11-15, the International Amateur Radio Union (IARU) Region 1 held their tri-annual General Conference in Davos, Switzerland, where one hundred fifty delegates from 56 countries participated. On Sunday, September 11, during the opening ceremony, the delegates viewed a video of Sergei Krikalev, U5MIR, who sent greetings from space to the participants, wishing them a successful meeting. A news bulletin covering the meeting and including a link to the video has been posted on the ARISS-Europe website. See: http://www.ariss-eu.org/2005_09_30.htm

5. Students Run PCSAT2 Experiment

On Thursday, September 29, Naval Academy midshipmen ran an experiment with PCSAT2. The students watched for packets via the PCSAT2 145.825 uplink, which were digipeated on the 435.275 downlink, and answered those by voice on the 437.975 downlink. Although they had little time to prepare for the pass, the students did have some success, and gained some experience from their lesson.

6. ARISS Budget 2006

A proposal was submitted to the Space Operations Mission Directorate (SOMD) to request funds for the ARISS program for the fiscal year 2006. ARISS Chairman Frank Bauer gave a presentation supporting this request on Friday, September 30.

7. NASA Nights Event

On September 27, NES teachers from Pine Ridge Middle School in Naples, Florida, held "NASA Nights," an event to educate parents, teachers and students about NASA programs. Amateur Radio operators from the Amateur Radio Association of South West Florida volunteered to set up a radio demonstration station, and schedule radio contacts with Amateur Radio operators who work at NASA facilities. The scheduled radio contacts allowed students to ask questions of "NASA experts."   After listening to contacts with hams in Chile, Great Britain and several states, students asked questions of hams at the NASA Ames Center in California. The Ames hams then made contact with hams at Kennedy Space Center, and relayed students' questions to KSC experts about the ISS and shuttles.

8. ARISS International Meeting Held

The monthly ARISS International teleconference was held on Tuesday, September 27. Agenda items discussed included the status of the Columbus Module antennas, SSTV, the SuitSat project, Greg Olsen's contacts, and the use of Voice over Internet Protocol (VoIP) for direct ARISS contacts. The next international meeting will be held on October 25.

SB SAT @ AMSAT $ANS-282.04
New Launch Date for SSETI Express

AMSAT News Service Bulletin 282.04
>From AMSAT HQ SILVER SPRING, MD.
October 9, 2005
To All RADIO AMATEURS
BID: $ANS-282.04

We have been advised that a new launch date has been agreed - Thursday 27th October from the Plesetsk Cosmodrome - with 28th October as a back-up date. The launch time is still expected to remain at 06:52:26 UTC

For those who have already set-up their sat TV equipment to receive the ESA transmissions on ASTRA 1G - you may like to know that the launch of the ESA

Cryosat spacecraft will be broadcast this coming Saturday - 8th October. Cryosat will lift-off from a launch facility at Plesetsk just a few kilometers away from where SSETI Express will be launched from.

Start GMT	End GMT	Description
14:20	14:45	Start of ESA TV Program - welcome from ESA/ESRIN
14:45	15:15	Launch coverage from ESA/ESOC and Plesetsk Cosmodrome
15:02		Scheduled lift-off
15:15	16:30	Cryosat background information - live from ESA/ESRIN
16:30	16:45	Live coverage of satellite/launcher separation from ESA/ESOC
16:36		Scheduled orbital injection
17:00	17:30	Post-launch media briefing from ESA/ESRIN

[ANS thanks Graham, G3VZV for the above information]

SB SAT @ AMSAT $ANS-282.05
AO-51 Special Event - JOTA Weekend 15-16 October

AMSAT News Service Bulletin 282.05
>From AMSAT HQ SILVER SPRING, MD.
October 9, 2005
To All RADIO AMATEURS
BID: $ANS-282.05

The annual Boy and Girl Scouts "Jamboree on the Air" Amateur Radio event is scheduled for 15 and 16 October 2005. As this is an International Scouting event, amateur radio stations around the world are invited to participate. The AO-51 command team is scheduling the satellite for exclusive use by the Scouts, and Satellite operators communicating with the Scouts, for this weekend. Please allow the Scouts the opportunity to make as many contacts as possible via AO-51 during this short time period. Base stations, please remember that most of the JOTA stations will be portable, so please use minimum power. The official times for the JOTA event will be from 1200 UTC on October 15 until 1200 UTC on October 17, 2005.

For the JOTA weekend, AO-51 will be configured in the Dual FM repeater mode. This will provide two independent FM repeaters (separate uplink and downlink frequencies) for use over the weekend. Both repeaters will be for use by the JOTA activity. This mode will run Monday through Friday before the event to allow amateur satellite stations to familiarize and test this mode. The configuration of the satellite frequencies for this mode is listed below.

AO-51 FM repeater #1
Downlink: 435.300 MHz
Uplink: 145.920 MHz with 67hz PL Tone

AO-51 FM repeater #2

Downlink: 435.150 MHz
Uplink: 145.880 MHz with NO PL Tone

Here are some web links for information on the JOTA weekend activity.
http://www.arrl.org/FandES/ead/jota.html
http://www.arrl.org/FandES/ead/ideas.html
http://www.scouting.org/international/jota.html

If your local club has a JOTA activity planned for the weekend please consider volunteering your services to provide a satellite communication station for the event.

Thanks for your support and participation.

[ANS thanks Mike, KE4AZN for the above information]

South Africa, Other African Nations to Build LEO Satellite Network

AMSAT News Service Bulletin 282.06
>From AMSAT HQ SILVER SPRING, MD.
October 9, 2005
To All RADIO AMATEURS
BID: $ANS-282.06

SA AMSAT has been involved in discussions with the Department of Science and Technology to include an amateur payload to serve the needs of Amateurs on the African continent.

"Now that the announcement has been made we will intensify our discussions with the various role-players", SA AMSAT President, Hans van de Groenendaal ZS6AKV said.

"At this time I call on Radio Amateurs to send in ideas of what payload they believe will serve the African Amateur Radio Community best.

The full story can be seen at:

One of the key actions of the Board of Directors was the election of the Executive Team officers.

Here are the results:

AMSAT Board of Directors

Richard Hambly, W2GPS

Barry Baines, WD4ASW
Gunther Meisse, W8GSM
Dr. Thomas A. Clark, W3IWI
Lou McFadin, W5DID
Paul Shuch, N6TX
Emily Clarke, W0EEC
Bob McGwier, N4HY (First Alternate)
Lee McLamb, KU4OS (Second Alternate)

AMSAT Officers

Richard Hambly, W2GPS: President
Lee McLamb, KU4OS: Executive Vice President
Mike Kingery, KE4AZN: Vice-President Operations
Frank Bauer, KA3HDO: Vice President of Human Spaceflight
Bob McGwier, N4HY: Vice-President Engineering
Barry Baines, WD4ASW: Vice-President Marketing and User Services
Steve Diggs, W4EPI: Secretary
Gunther Meisse, W8GSM: Treasurer
Martha Saragovitz: Manager

Stan Wood, WA4NFY has retired as VP of Engineering. AMSAT thanks Stan for his years of service in this important capacity.
We welcome and congratulate, Bob McGwier, N4HY, as the new AMSAT Vice-President Engineering.

Current scheduled operating modes:

AO-51 Special Event - JOTA Weekend 15-16 Oct

The annual Boy and Girl Scouts "Jamboree on the Air" Amateur Radio event is scheduled for 15 and 16 October 2005. As this is an International Scouting event, amateur radio stations around the world are invited to participate. The AO-51 command team is scheduling the satellite for exclusive use by the Scouts, and Satellite operators communicating with the Scouts, for this weekend. Please allow the Scouts the opportunity to make as many contacts as possible via AO-51 during this short time period. Base stations, please remember that most of the JOTA stations will be portable, so please use minimum power. The official times for the JOTA event will be from 1200 UTC on October 15 until 1200 UTC on October 17, 2005.

For the JOTA weekend, AO-51 will be configured in the Dual FM repeater mode. This will provide two independent FM repeaters (separate uplink and downlink frequencies) for use over the weekend. Both repeaters will be for use by the JOTA activity. This mode will run Monday through Friday before the event to allow amateur satellite stations to familiarize and test this mode. The configuration of the satellite frequencies for this mode is listed below.

AO-51 FM repeater #1
Downlink: 435.300 MHz
Uplink: 145.920 MHz with 67hz PL Tone

AO-51 FM repeater #2
Downlink: 435.150 MHz
Uplink: 145.880 MHz with NO PL Tone

Here are some web links for information on the JOTA weekend activity.
http://www.arrl.org/FandES/ead/jota.html
http://www.arrl.org/FandES/ead/ideas.html
http://www.scouting.org/international/jota.html

If your local club has a JOTA activity planned for the weekend please consider volunteering your services to provide a satellite communication station for the event.

Thanks for your support and participation.

[ANS-WSR thanks Mike Kingery, KE4AZN for the above information]
[09252005]
=====

SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that SO-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10 minute timer.

[09122004]

=====

FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

John, N4QWL reports on July 16th, 2005:

Last evening I had a AOS to LOS qso with WI2W. FO-29 came up at 01:17z here in FM07 and I found WI2W and we chatted until 01:33z. The satellite was at 2 degrees elevation when I finally heard him start to crackle a bit. What a great QSO! To think that I watched this bird launch back in 1996 and it is still working so well is a real thrill. I believe I still have the video. I might just look for it and watch it again. Boy do I love this satellite stuff! Look for you all up there.

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that
will automatically analyze all digital telemetry from the satellite (such as
current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[ANS-WSR wishes to thanks John, N4QWL for this week's report]
[07172005]
=====
AO-27 AMRAD
Catalog number: 22825
Launched: September 26, 1993

Status: Operational

Uplink: 145.850 MHz FM
Downlink: 436.795 MHz FM

The latest information on AO-27 from control operator Michael Wyrick,
N3UC (former N4USI), can be found at:
http://www.ao27.org

An AO-27 question-and-answer page is available on the AMSAT-NA web
site, with updates by Ray, W2RS. The URL is:
http://www.amsat.org/amsat/intro/ao27faq.html

[ANS-WSR thanks John, K6YK, for this week's AO-27 report]

=====

INTERNATIONAL SPACE STATION (ISS) - ARISS
Catalog number: 25544
Launch date: November 20, 1998

Status: Operational
Current Mode: U/V CROSS-BAND REPEATER
Digipeater: Inactive

The current Expedition 11 crew is:
Commander Sergei Krikalev
Flight Engineer John Phillips

Worldwide packet uplink: 145.990 MHz FM
Region 1 voice uplink: 145.200 MHz FM
Region 2/3 voice uplink: 144.490 MHz FM
Worldwide downlink: 145.800 MHz FM

Repeater Uplink: 437.800 MHz FM
Repeater Downlink: 145.800 MHz FM
Doppler Shift is 10 KHz

Russian callsigns: RS0ISS, RZ3DZR
USA callsign: NA1SS
Packet station mailbox callsign: RS0ISS-11
Packet station keyboard callsign: RS0ISS-3
Digipeater callsign: ARISS

This from Frank Bauer, KA3HDO:
The SSTV system will be installed inside the Service module as an integral part of the ARISS ham radio system. It will transmit and receive (JPG)still images from the International Space Station in a format called Slow Scan TV (SSTV). When fully operational, the SSTV system is capable of sending up to 480 images per day from ISS.   It will also be able to receive images from amateur radio stations on Earth. This system will utilize the already installed Kenwood D-700 radio and the ARISS antennas mounted on the Service Module. The SSTV equipment flown on Progress 19P includes the SpaceCam software, a radio/computer interface module, and data cables. The dedicated laptop for SSTV operations will be launched on a subsequent Progress vehicle

This off the ARISS webpage:
< http://www.rac.ca/ariss/oindex.htm#New%20ARISS%20Operations >:
The ARISS program is pleased to announce that the amateur radio equipment aboard the International Space Station is now operating in cross-band repeat mode. We realize that many of you will miss the packet-operating mode. However, cross-band repeat allows further experimentation of the ISS amateur radio system

The downlink for this operating mode remains the same, so listen for the station on 145.80 MHz. The new uplink frequency is 437.80 MHz. All freq-

uencies are subject to Doppler shifting. For further information on
working satellites and adjusting for Doppler shift, please review Emily
Clark's
(W0EEC) excellent presentation on AMSAT's website:
http://www.amsat.org/amsat-new/information/faqs/Intro_sats.pdf

The ISS daily crew schedule can be found at:
http://spaceflight.nasa.gov/station/timelines/
Remember that the crew operates on UTC time. Also, all of the time line
is
NOT translated from Russian and posted.

WSR 282 Part 2 10/09/2005

AMSAT NEWS SERVICE BULLETIN 282.S2 FROM AMSAT HQ
SILVER SPRING, MD, OCTOBER 09, 2005
TO ALL RADIO AMATEURS
BID: $ANS-282.S2

PCSAT2 ?0-??
Catalog Number:
Launch Date: August 1, 2005

Status: Operational

PCSAT2 was installed on the exterior of the International Space
Station and was activated on August 3, 2005.

PCSAT2 CAPABILITIES: PCSAT2 is attached to the ISS and so its operations
must be in cooperation with the ARISS communications suite to minimize
any
mutual interference and to coordinate activities. Here are the
capabilities
of the PCSAT2 and ARISS payloads:

PCSAT SYSTEM A:

435.275 PCSAT2 DOWNLINK 1200 baud packet with uplink on 145.825
435.275 PCSAT2 DOWNLINK Occasional user PSK-31 continuous downlink
145.825 PCSAT2 DOWNLINK 1200 baud packet
PCSAT SYSTEM B:

437.975 PCSAT2 DOWNLINK periodic Solar Cell data and PCSAT2 telemetry at 9600 baud
437.975 PCSAT2 DOWNLINK TNC-B command downlink at 1200 baud
437.975 PCSAT2 DOWNLINK User Voice Repeater with VHF uplink
437.975 PCSAT2 DOWNLINK Packet digipeater with VHF uplink

It looks like PCSAT2 can best contribute at this time by operating in PSK-31 mode for the near future. This is a very exciting new transponder mode which solves the congestion problem on FM repeaters by letting multiple stations all communicate at the same time.

PSK-31 users are welcome to try out the new PCSAT2 PSK-31 transponder on ISS with an uplink on 29.402 +/- 1 KHz and downlink on 435.275 +/- Doppler using FM.

The FM downlink lets everyone operate full duplex and everyone to see the same view of the passband as everyone else. THus you can see exactly what your signal looks like to everyone else.

Help Wanted:

Here is your chance to become a viable part of the Amateur Satellite Community.

We are looking for a volunteer satellite packet station in Hawaii that is interested in helping with telemetry and sat-gating of PCSAT2 and ARISS packets. Requirements are:

1) General familiarity with packet
2) TNC connected to a cross band radio that
     can RX on UHF and TX on VHF.
3) modest UHF beam and rotator system.

Contact WB4APR for more information.

Packets seen from PCSAT2 can be reviewed at:
http://www.findu.com/cgi-bin/pcsat2.cgi

A screen shot of both the 9600 bps and 1200 bps decoded data as seen by Simon, 9W2QC, can be seen at:
http://www.9w2qc.net/pcsat2/

More information on PCSAT2 can be found at:
http://web.usna.navy.mil/~bruninga/pcsat2.html

[ANS-WSR thanks Bob, WB4APR and the U.S. Naval Academy Satellite Lab for the aboveinformation.]

=====

CUTE-1
Catalog number: 27844
Launched: June 30,2003

Status: Operational

Uplink: ?
Downlink: 436.8375 CW
              437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ?)
Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as OPERATIONAL?
Indeed it is very operational as a CUBESAT sending CW telemetry on 436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:

```
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6
```

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at 14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz. Initial orbital parameters were period 101.4 min, apogee 831 km, perigee 819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

[ANS WSR wishes to thank Cliff, K7RR, for this week's information]

=====
UO-11 OSCAR-11
Catalog number: 14781
Launched: March 1, 1984

Status: Semi-operational?

Telemetry Downlink: 145.826 MHz. FM (1200-baud AFSK).
approx. 10 days ON, 10 days OFF
Mode-S Beacon: 2401.500 MHz. ... OFF
UHFBeacon: 435.025 MHz. ... OFF

OSCAR-11 is back! I received the good news, on Saturday morning, while at the AMSAT-UK Colloquium. This was entirely unexpected! On Sunday morning Bob G4VRC played me a recording of an early morning pass received that day.

During the period 21 July to 14 August 2005 consistent signals have been heard from 30 July to 08 August. Signals seem to be weaker than usual, confirmed by the many reports received. However,since I last heard the satellite on 30 April, I've reinstalled my antennas , which makes comparisons difficult.

Many thanks for all the recent reports of OSCAR-11 including those from KU7Z (who heard it first), KB2M, VK6XH, HK7MKE, KA2UPW, JE9PEL, G1OCN, HB9SKA and G8OQW.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working. One bit in channel 62, DSR mode, has changed from WRITE to READ. DSR is the Digital Store & Readout experiment. This could be significant if the experiment is still drawing current, but the other status bit indicates that it is switched OFF.

The on-board clock is now showing a very large error. It has lost approximately 19 days since 30 April. During the recent data collection period, the clock error has been changing at a decreasing rate. The size of the clock error and the rate at which it is changing is similar to the duration of the solar eclipse periods. This suggests that the clock might have been switching OFF during eclipses.

The eclipses have now ended, and the satellite should be in continuous sunlight for the remainder of this year, and well into next year. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures.

If the watchdog timer is still operating on a 20 day cycle, ie. approximately ten days ON followed by 10 days OFF, then the VHF beacon should resume transmissions around 18 August.

The Beacon frequencies are -

VHF 145.826 MHz. AFSK FM ASCII Telemetry

UHF 435.025 MHz. OFF

S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is www.users.zetnet.co.uk/clivew/

If you place this bulletin on a terrestrial packet network, please use the bulletin identifier $BID:U2RPT112.CWV, to prevent duplication.

[ANS-WSR thanks Clive, G3CWV, for the above information]

More information on UO-11 OSCAR-11 can be found at:
http://www.users.zetnet.co.uk/clivew/

          435.275 MHz

Uplink: 145.925 MHz
          145.975 MHz

Broadcast callsign: POSAT1-11
BBS callsign: POSAT1-12

PO-28 (POSAT-1), Portugal's first satellite, launched 12 years ago, will be turned over to Amateur Radio use in the very near future. That was the word July 30 from AMSAT-UK Secretary Jim Heck, G3WGM, during the AMSAT-UK International Space Colloquium in Guildford, England.

Launched September 25, 1993, the satellite operated as a packet store-and-forward BBS (9600 baud FM FSK) on Amateur Radio frequencies for several weeks in early 1994. Over the years, PO-28's primary usage has been commercial, although plans have called for eventually shifting its operation to ham radio use. G3WGM reports that following lengthy negotiations it has been agreed that the satellite can be switched permanently to amateur frequencies. The changeover is expected to take a couple of weeks.

The Portuguese satellite was built at the University of Surrey as part of a collaborative satellite technology program that involved industry and academe. Uplink frequencies will be 145.925 and 145.975 MHz. Downlink frequencies will be 435.250 and 435.275 MHz. More information on PO-28 is on the AMSAT Web site
http://www.amsat.org/amsat/sats/n7hpr/po28.html.

Uplink Frequencies: 145.925 and 145.975 MHz
Downlink Frequencies: 435.250 and 435.275 MHz

Orbit: 822 x 800 km, 98.6 deg inclined, sun-synchronous.

Transponder capabilities include FM repeater and 38k4 data. If you want to hear how loud this satellite is, listen on 429.950 until the change back to amateur radio service.

Keplerian elements for PO-28 are not currently contained in the AMSAT keps bulletins, but can be found at Celestrak in amateur.txt using the name "POSAT". Users of Space Track should query the NORAD Satellite ID number 22829. The name listed by Space Track is "EYESAT A".

More information of POSAT-1 can be found at:
http://www.ee.surrey.ac.uk/SSC/CSER/UOSAT/missions/posat1.html
http://www.amsat.org/amsat/sats/n7hpr/po28.html

[ANS-WSR wishes to thanks Trevor, M5AKA and Jim, G3WGM, for this week's information.]
[08072005]
=====
AO-10 OSCAR 10
Catalog number: 14129
Launched: June 16, 1983

Status: Non-operational

Uplink: 435.030 to 435.180 MHz CW/LSB
Downlink: 145.975 to 145.825 MHz CW/USB
Beacon: 145.810 MHz (unmodulated carrier)

AO-10 has been locked into a Mode-B, 70-cm uplink and
2-meter downlink for several years.

W4SM has more information about the satellite at the following URL:
http://www.cstone.net/~w4sm/AO-10.html

=====
IO-26 ITAMSAT
Catalog number: 22826
Launch Date: September 26, 1993

Status: Non-operational

Uplink: 145.875 145.900 145.925 145.950 MHz FM (1200-baud)
Downlink: 435.812 MHz SSB
Broadcast Callsign: ITMSAT-11
BBS: ITMSAT-12

Alberto E. Zagni - I2KBD reports on 02/13/05
The spacecraft is in MBL (safe mode) and is trasmitting just 6 channels of telemetry. Temperatures and voltage are nominal, but there seems to be a problem with the onboard receiver, refusing to accept commands.
The spacecraft was launched in 1993, thus nearing 12 years in orbit...

Best regards
Alberto E. Zagni - I2KBD
ITAMSAT Mission Director

More information of IO-26 can be found at:

PO-34 PANSAT
Catalog number: 25520
Launched: October 30, 1998

Status: Telemetry downloads only

Uplink/downlink frequency (listed on the PanSat web site) 436.500 MHz

The satellite is not available for general uplink transmissions.

The Naval Postgraduate School developed PanSat. At the time of launch, PanSat spread-spectrum digital transponders were to be available to Amateur Radio operators along with software to utilize this technology.

The satellite is still operating, however, the spread spectrum packet radio portion never took place. The spacecraft is now beyond it's initial 2-year mission life, but telemetry records are still being downloaded.

For more information, visit the official PanSat web site at:
http://www.sp.nps.navy.mil/pansat/
[05092004]

=====

SO-33 SEDSAT-1
Catalog number: 25509
Launched: October 24, 1998

Status: Semi-operational

Downlink: 437.910 MHz FM (9600-baud FSK)

The satellite is not currently available for uplink transmissions and the image and transponder recovery efforts have been unsuccessful.

For more information on SedSat-1 visit the satellite web site:
http://seds.uah.edu/projects/sedsat/sedsat.htm

```
[ANS has no further information]

=====
AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
```

Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio anand telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at: http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

SILVER SPRING, MD, OCTOBER 02,2005
TO ALL RADIO AMATEURS
BID: $ANS-282.S4

THE FOLLOWING SATELLITES ARE NOT IN ORBIT BUT ARE PROPOSED FOR LAUNCH AT THIS TIME:

UCISAT ?O-??
Catalog number:
Proposed Launch Date: October 31, 2005

Status: Under Construction

Downlink: Submission in Progress
Uplink: Submission in Progress
Callsign: Submission in Progress

This from Matt Bennett, KF6RTB, UCISAT Communications Team Member:

Our website is www.ucisat.net .This is a new website, however, and doesn't have the "Status" section active yet. Because of the growing interest in
our project, I'll push our webmaster to create updates (hopefully) on a week-to-week basis. For now, the current status of the mission is as follows:

-Expected Launch Date: October 31st, 2005
-Frequency Allocation: Submission in Progress
-Construction Status: Sub-Assembly
[WSR to thank Matt Bennett, KF6RTB, for this week's report.]
[01302005]
=====
SSETI ?O-??
Catalog Number:
Proposed Launch Date: LATE 2005

Status: AWAITING LAUNCH

Graham, G3VZV reports:
Dear all,

Unfortunately we have just learnt that we have an INDEFINITE launch delay.

This is due to one of the spacecraft on the launch, "SINAH", having suffered a significant failure and not being ready to fly.

Early indications suggest that we have a delay of at least one month, but this is not confirmed.

The launch campaign team will make the spacecraft and the ground support equipment safe and then come home.

This is, of course, very unfortunate, but it is not critical! The spacecraft can easily wait for the new launch date without any significant problems, and we will fly it as soon as we can.

In the meantime please cancel all arrangements for your national launch events.

We'll get there eventually.

Watch this space...

Neil

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live
radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz.

Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
        888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satelite Report Editor is James K. Darrow, KB9MMC.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

AMSAT NEWS SERVICE
ANS-289

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:
ans-editor@amsat.org

In this edition:

* AMSAT Meeting Internet Success
* PCSAT2 and WB4APR Featured in Magazine Article
* SSETI Update - New Handbook Available
* ARISS Status for the week of October 10, 2005
* AMSAT Project EAGLE Volunteer Opportunity

AMSAT Meeting Internet Success

AMSAT News Service Bulletin 289.01
>From AMSAT HQ SILVER SPRING, MD.
October 16, 2005
To All RADIO AMATEURS
BID: $ANS-289.01

Following the success of the first ever internet connectivity via Echolink for the AMSAT General Meeting held on October 7 in Pittsburgh, the Board of Directors plans to repeat this feature for members when the logistics next allow. During the meeting, those in the room at Pittsburgh participated with other members in 12 countries via Echolink.

"This is really cool", in the words of AMSAT President Rick Hambly, W2GPS, "It was difficult working out the logistics, but it worked!" Rick further commented that, "We got the message. We conducted a successful meeting because we were open and in touch with the membership."

AMSAT members wishing to participate in future internet sessions are invited to begin learning about Voice Over IP (VoIP) technology and configuring their amateur station computers. Plans are in motion to publish updated "how-to" information on the AMSAT web and in the Journal. In the meantime here are two references to begin your research:

SSETI Update - New Handbook Available

AMSAT News Service Bulletin 289.03
>From AMSAT HQ SILVER SPRING, MD.
October 16, 2005
To All RADIO AMATEURS
BID: $ANS-289.03

The SSETI Express Handbook has been updated. The latest version can be downloaded free of charge from the AMSAT-UK website at:

http://www.uk.amsat.org/

In is also available in Japanese thanks to the work of Toyo Komatsu, JA0CQP

The new Keplerian elements for a SSETI Express launch at 06:52:26 UTC on October 27th are also on the AMSAT-UK website. These were provided by Viktor Kudielka, OE1VKW.

[ANS thanks Trevor, M5AKA for the above information]

ARISS Status for the week of October 10, 2005

AMSAT News Service Bulletin 289.04
>From AMSAT HQ SILVER SPRING, MD.
October 16, 2005
To All RADIO AMATEURS
BID: $ANS-289.04

1. ARISS School Contacts Successful

On Wednesday, October 5, Greg Olsen, KC2ONX, participated in his first ARISS contact as he spoke to students at Princeton High School in Princeton, New Jersey The audio was streamed over the internet, courtesy of MCI, and was fed through the Echolink AMSAT and EDU_NET servers.

Students from Fort Hamilton High School in Brooklyn, New York enjoyed a contact with Greg Olsen, KC2ONX, via the telebridge station, VK5ZAI, in Australia. On Thursday, October 6, ten students asked 13 questions of the space traveler while the student body of 4500 children listened in. The audio was also fed through Echolink, and thirty stations (including 3 repeater nodes) from twelve countries tied in: USA, UK, Brazil, Chile, Germany, Thailand, Japan, Holland, Russia, Australia, India, and Romania.

On October 7, Greg Olsen, KC2ONX, spoke with students at Ridgefield Park High School (Olsen's alma mater) in Ridgefield Park, New Jersey via the telebridge station ZS6BTD in South Africa. The audio was fed through Echolink, as twenty connections, of which 4 were repeater nodes, were made from stations in Germany, Thailand, UK, USA, Japan, Holland, Russia, and South Africa.

2. ARRL Article on Space Visitor

ARISS provided pass times to Greg Olsen so that he could make contacts with the general public, as time allowed. ARRL ran an article, which included the pass times, entitled, "'Space Tourist' May Get on the Air from NA1SS for Casual Contact."
See: <http://www.arrl.org/news/stories/2005/10/03/2/?nc=1>

3. JOTA 2005

The 2005 Jamboree on the Air (JOTA) was held on Saturday and Sunday, October 15-16. The event encourages both Boy Scouts and Girl Scouts to become involved with amateur radio. Expedition 12 crew members were heard on the 145.800 MHz downlink as NA1SS, the amateur station aboard the ISS, participated in JOTA.

4. Space Times Article on ISS Ham Radio

Space Times, a publication of the American Astronautical Society ran an article in its July/August 2005 issue which mentions the amateur radio system on board the ISS, and its use by crew members as a past time activity.

[ANS thanks Carol, KB3LKI for the above information]

SB SAT @ AMSAT $ANS-289.05
AMSAT Project EAGLE Volunteer Opportunity

AMSAT News Service Bulletin 289.05
>From AMSAT HQ SILVER SPRING, MD.
October 16, 2005
To All RADIO AMATEURS
BID: $ANS-289.05

Gould Smith, WA4SXM wrote, "I was privileged to attend the second EAGLE planning meeting. First - the EAGLE project is very much alive and progressing quite well. Granted, I had some concerns going into the meetings, but these were quickly put to rest. The project has excellent leadership, excellent technical expertise, a great deal of actual satellite experience and a wonderful 'get it done' attitude from all the teams."

The open design and development concept for EAGLE should be quite informative to those of us outside the design team. We will have a great opportunity to learn more about what goes into making the decisions about the spacecraft, its orbit and its operational modes.
In addition, we all now assume the responsibility to make this the

best thought out, documented and tested amateur satellite ever.

So, following in the age old AMSAT tradition of volunteering to fill a need, I have volunteered to help communicate what is going on with the EAGLE project.

This a short introduction to many updates coming over the next months and years as the AMSAT-NA EAGLE satellite project matures into an orbiting satellite. I am planning on releasing a report at least once a month and more often when important information becomes available. This report will be available through the AMSAT BB and on the EAGLE website.

There already is so much to write about that I am going to have to break it down into different areas on each report, because I won't have time to write about all the areas in each report. There are many separate, parallel efforts going on during this early stage. As these separate projects mature, the integration and coordination of these modules into the EAGLE satellite should prove to be a fascinating journey.

One of the items discussed was the 2006 EAGLE budget. As you can see from the EAGLE project thermometer on the AMSAT EAGLE site, $33k won't go very far. It is time to start purchasing items for development and EAGLE needs your support both as a volunteer and as a donor. You can do both of these on the AMSAT web site.

I am interested in some people to help me take the raw technical information provided by the project teams and put this into a more digestible
format. Let me know if you are interested by e-mail to wa4sxm@amsat.org.

[ANS thanks Gould, WA4SXM for the above information]

/EX

In addition to regular membership, AMSAT offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT Office.

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink:    145.850 MHz (67.0 Hz PL tone) (See below for operating
          procedures)
Downlink:  436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that SO-50
has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of  74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm
   the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT
   the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window
   will reset the 10 minute timer.
[09122004]
=====
FO-29 JAS-2
```

Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

John, N4QWL reports on July 16th, 2005:

Last evening I had a AOS to LOS qso with WI2W. FO-29 came up at 01:17z here in FM07 and I found WI2W and we chatted until 01:33z. The satellite was at 2 degrees elevation when I finally heard him start to crackle a bit. What a great QSO! To think that I watched this bird launch back in 1996 and it is still working so well is a real thrill. I believe I still have the video. I might just look for it and watch it again. Boy do I love this satellite stuff! Look for you all up there.

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will automatically analyze all digital telemetry from the satellite (such as current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[ANS-WSR wishes to thanks John, N4QWL for this week's report]
[07172005]
=====
AO-27 AMRAD
Catalog number: 22825
Launched: September 26, 1993

Status: Operational

Uplink: 145.850 MHz FM
Downlink: 436.795 MHz FM

The latest information on AO-27 from control operator Michael Wyrick, N3UC (former N4USI), can be found at:
http://www.ao27.org

An AO-27 question-and-answer page is available on the AMSAT-NA web site, with updates by Ray, W2RS. The URL is:
http://www.amsat.org/amsat/intro/ao27faq.html

[ANS-WSR thanks John, K6YK, for this week's AO-27 report]
[08292004]
=====
AO-7 AMSAT OSCAR 7
Catalog number: 07530
Launch Date: November 15, 1974

Status: Semi-operational in sunlight.
Return to active status: June 21,2002

Uplink: 145.850 to 145.950 MHz CW/USB Mode A
            432.125 to 432.175 MHz CW/LSB Mode B
Downlink: 29.400 to 29.500 MHz CW/USB Mode A
            145.975 to 145.925 MHz CW/USB Mode B
Beacon: 29.502 MHz, 145.972 MHz, 435.1 MHz, 2304.1 MHz

Emily, W0EEC has created a website to allow the users of AO-7 to record
contacts, observations and use of the satellite more effectively at:
http://www.emilyshouse.com/experthams/ao7/main.php
This includes the ability to log contacts.

Tim, K3TZ has written a program to decode AO-07 telemetry.
The program can be downloaded at:
http://www.qsl.net/k3tz/files/K3TZ_AO-07_Telemetry_Decoder_0.5.zip

SB SAT @ AMSAT <KB9MMC $ANS-289.S2
WSR 289 Part 2 10/16/2005

AMSAT NEWS SERVICE BULLETIN 289.S2 FROM AMSAT HQ
SILVER SPRING, MD, OCTOBER 16, 2005
TO ALL RADIO AMATEURS
BID: $ANS-289.S2

PCSAT2 ?0-??
Catalog Number:
Launch Date: August 1, 2005

Status: Operational

PCSAT2 was installed on the exterior of the International Space Station and was activated on August 3, 2005.

PCSAT2 CAPABILITIES: PCSAT2 is attached to the ISS and so its operations must be in cooperation with the ARISS communications suite to minimize any mutual interference and to coordinate activities. Here are the capabilities of the PCSAT2 and ARISS payloads:

PCSAT SYSTEM A:

435.275 PCSAT2 DOWNLINK 1200 baud packet with uplink on 145.825
435.275 PCSAT2 DOWNLINK Occasional user PSK-31 continuous downlink
145.825 PCSAT2 DOWNLINK 1200 baud packet

PCSAT SYSTEM B:

437.975 PCSAT2 DOWNLINK periodic Solar Cell data and PCSAT2 telemetry at 9600 baud
437.975 PCSAT2 DOWNLINK TNC-B command downlink at 1200 baud

437.975 PCSAT2 DOWNLINK User Voice Repeater with VHF uplink
437.975 PCSAT2 DOWNLINK Packet digipeater with VHF uplink

It looks like PCSAT2 can best contribute at this time by operating in PSK-31 mode for the near future. This is a very exciting new transponder mode which solves the congestion problem on FM repeaters by letting multiple stations all communicate at the same time.

PSK-31 users are welcome to try out the new PCSAT2 PSK-31 transponder on ISS with an uplink on 29.402 +/- 1 KHz and downlink on 435.275 +/- Doppler using FM.

The FM downlink lets everyone operate full duplex and everyone to see the same view of the passband as everyone else. THus you can see exactly
what your signal looks like to everyone else.

Help Wanted:

Here is your chance to become a viable part of the Amateur Satellite Community.

We are looking for a volunteer satellite packet
station in Hawaii that is interested in helping with
telemetry and sat-gating of PCSAT2 and
ARISS packets. Requirements are:

1) General familiarity with packet
2) TNC connected to a cross band radio that
     can RX on UHF and TX on VHF.
3) modest UHF beam and rotator system.

Contact WB4APR for more information.

Packets seen from PCSAT2 can be reviewed at:
http://www.findu.com/cgi-bin/pcsat2.cgi

A screen shot of both the 9600 bps and 1200 bps decoded data
as seen by Simon, 9W2QC, can be seen at:
http://www.9w2qc.net/pcsat2/

More information on PCSAT2 can be found at:
http://web.usna.navy.mil/~bruninga/pcsat2.html

[ANS-WSR thanks Bob, WB4APR and the U.S. Naval Academy Satellite Lab for the aboveinformation.]

NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Non-Operational?????

Uplink/downlink: 145.827 MHz 1200 baud AX.25 AFSK via W3ADO-1
Aux/Uplink: 435.250 MHz 9600 baud via PCSAT-2 (off)
APRS Downlink: 144.390 MHz (Region 2)

PCSat is a 1200-baud APRS digipeater designed for use by stations using hand-held or mobile transceivers. Downlinks feed a central web site at: http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy under the guidance of Bob Bruninga, WB4APR.
[07242005]
=====
CUTE-1
Catalog number: 27844
Launched: June 30,2003

Status: Operational

Uplink: ?
Downlink: 436.8375 CW
437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ?)
Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as OPERATIONAL?
Indeed it is very operational as a CUBESAT sending CW telemetry on 436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:

```
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6
```

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at 14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz. Initial orbital parameters were period 101.4 min, apogee 831 km, perigee 819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

[ANS WSR wishes to thank Cliff, K7RR, for this week's information]
[07242005]
=====
GO-32 TECHSAT-1B
Catalog number: 25397
Launch Date: July 10, 1998

Status: Operational

Downlink: 435.225 MHz FM (9600-baud FSK)
                    (435.325 n/a - temperature problems)
Uplinks: 145.850, 145.890, 145.930 FM

MO-46 TIUNGSAT-1
Catalog number: 26548
Launched: September 26, 2000

Status: Operational

Uplink: 145.850 or 145.925 MHz 9600-baud FSK
Downlink: 437.325 MHz
Broadcast callsign: MYSAT3-11
BBS: MYSAT3-12

TiungSat-1 is Malaysia's first micro-satellite and in addition to commercial land and weather imaging payloads offers FM and FSK Amateur Radio communication.

TiungSat-1, named after the mynah bird of Malaysia, was developed as a collaborative effort between the Malaysian government and Surrey Satellite Technology Ltd.

=====
UO-11 OSCAR-11
Catalog number: 14781
Launched: March 1, 1984

Status: Semi-operational?

Telemetry Downlink: 145.826 MHz. FM (1200-baud AFSK).
                    approx. 10 days ON, 10 days OFF
Mode-S Beacon: 2401.500 MHz. ... OFF
UHFBeacon: 435.025 MHz. ... OFF

OSCAR-11 is back! I received the good news, on Saturday morning, while at the AMSAT-UK Colloquium. This was entirely unexpected! On Sunday morning Bob G4VRC played me a recording of an early morning pass received that day.

During the period 21 July to 14 August 2005 consistent signals have been heard from 30 July to 08 August. Signals seem to be weaker than usual, confirmed by the many reports received. However,since I last heard the satellite on 30 April, I've reinstalled my antennas , which makes comparisons difficult.

Many thanks for all the recent reports of OSCAR-11 including those from KU7Z (who heard it first), KB2M, VK6XH, HK7MKE, KA2UPW, JE9PEL, G1OCN, HB9SKA and G8OQW.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working. One bit in channel 62, DSR mode, has changed from WRITE to READ. DSR is the

Digital Store & Readout experiment. This could be significant if the experiment is still drawing current, but the other status bit indicates that it is switched OFF.

The on-board clock is now showing a very large error. It has lost approximately 19 days since 30 April. During the recent data collection period, the clock error has been changing at a decreasing rate. The size of the clock error and the rate at which it is changing is similar to the duration of the solar eclipse periods. This suggests that the clock might have been switching OFF during eclipses.

The eclipses have now ended, and the satellite should be in continuous sunlight for the remainder of this year, and well into next year. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures.

If the watchdog timer is still operating on a 20 day cycle, ie. approximately ten days ON followed by 10 days OFF, then the VHF beacon should resume transmissions around 18 August.

The Beacon frequencies are -

VHF 145.826 MHz. AFSK FM ASCII Telemetry

UHF 435.025 MHz. OFF

S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is www.users.zetnet.co.uk/clivew/

If you place this bulletin on a terrestrial packet network, please use the bulletin identifier $BID:U2RPT112.CWV, to prevent duplication.

[ANS-WSR thanks Clive, G3CWV, for the above information]

SB SAT @ AMSAT <KB9MMC $ANS-289.S3
WSR 289 Part 3 10/16/2005

AMSAT NEWS SERVICE BULLETIN 289.S3 FROM AMSAT HQ

SILVER SPRING, MD, OCTOBER 16, 2005
TO ALL RADIO AMATEURS
BID: $ANS-289.S3

THE FOLLOWING ARE IN ORBIT BUT ARE
NON-OPERATIONAL AT THIS TIME:

POSAT-1 PO-28
Catalog Number: 22829
Launched : September 25, 1993

Status: Operational - Not open for Amatuer use

Downlink: 435.250 MHz
          435.275 MHz

Uplink: 145.925 MHz
          145.975 MHz

Broadcast callsign: POSAT1-11
BBS callsign: POSAT1-12

PO-28 (POSAT-1), Portugal's first satellite, launched 12 years ago, will be turned over to Amateur Radio use in the very near future. That was the word July 30 from AMSAT-UK Secretary Jim Heck, G3WGM, during the AMSAT-UK International Space Colloquium in Guildford, England.

Launched September 25, 1993, the satellite operated as a packet store-and-forward BBS (9600 baud FM FSK) on Amateur Radio frequencies for several weeks in early 1994. Over the years, PO-28's primary usage has been commercial, although plans have called for eventually shifting its operation to ham radio use. G3WGM reports that following lengthy negotiations it has been agreed that the satellite can be switched permanently to amateur frequencies. The changeover is expected to take a couple of weeks.

The Portuguese satellite was built at the University of Surrey as part of a collaborative satellite technology program that involved industry and academe. Uplink frequencies will be 145.925 and 145.975 MHz. Downlink frequencies will be 435.250 and 435.275 MHz. More information on PO-28 is on the AMSAT Web site
http://www.amsat.org/amsat/sats/n7hpr/po28.html.

Uplink Frequencies: 145.925 and 145.975 MHz
Downlink Frequencies: 435.250 and 435.275 MHz

Orbit: 822 x 800 km, 98.6 deg inclined, sun-synchronous.

Transponder capabilities include FM repeater and 38k4 data. If you want to hear how loud this satellite is, listen on 429.950 until the change back to amateur radio service.

Keplerian elements for PO-28 are not currently contained in the AMSAT keps bulletins, but can be found at Celestrak in amateur.txt using the

name "POSAT". Users of Space Track should query the NORAD Satellite ID
number 22829. The name listed by Space Track is "EYESAT A".

More information of POSAT-1 can be found at:
http://www.ee.surrey.ac.uk/SSC/CSER/UOSAT/missions/posat1.html
http://www.amsat.org/amsat/sats/n7hpr/po28.html
[ANS-WSR wishes to thanks Trevor, M5AKA and Jim, G3WGM, for this week's
information.]

IO-26 ITAMSAT
Catalog number: 22826
Launch Date: September 26, 1993

Status: Non-operational

Uplink: 145.875 145.900 145.925 145.950 MHz FM (1200-baud)
Downlink: 435.812 MHz SSB
Broadcast Callsign: ITMSAT-11
BBS: ITMSAT-12

Alberto E. Zagni - I2KBD reports on 02/13/05
The spacecraft is in MBL (safe mode) and is trasmitting just 6 channels
of telemetry. Temperatures and voltage are nominal, but there seems to
be a problem with the onboard receiver, refusing to accept commands.
The spacecraft was launched in 1993, thus nearing 12 years in orbit...

Best regards
Alberto E. Zagni - I2KBD
ITAMSAT Mission Director

AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002
```

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio anand telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at: http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

Downlink: Submission in Progress
Uplink: Submission in Progress
Callsign: Submission in Progress

This from Matt Bennett, KF6RTB, UCISAT Communications Team Member:

Our website is www.ucisat.net .This is a new website, however, and doesn't have the "Status" section active yet. Because of the growing interest in our project, I'll push our webmaster to create updates (hopefully) on a week-to-week basis. For now, the current status of the mission is as follows:

-Expected Launch Date: October 31st, 2005
-Frequency Allocation: Submission in Progress
-Construction Status: Sub-Assembly
[WSR to thank Matt Bennett, KF6RTB, for this week's report.]
[01302005]
=====
SSETI ?O-??
Catalog Number:
Proposed Launch Date: LATE 2005

Status: AWAITING LAUNCH

Graham, G3VZV reports:
Dear all,

Unfortunately we have just learnt that we have an INDEFINITE launch delay.

This is due to one of the spacecraft on the launch, "SINAH", having suffered a significant failure and not being ready to fly.

Early indications suggest that we have a delay of at least one month, but this is not confirmed.

The launch campaign team will make the spacecraft and the ground support equipment safe and then come home.

This is, of course, very unfortunate, but it is not critical! The spacecraft can easily wait for the new launch date without any significant problems, and we will fly it as soon as we can.

In the meantime please cancel all arrangements for your national launch events.

We'll get there eventually.

Watch this space...

Neil

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
        888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

- AMSAT News Service (ANS)
- General satellite discussion (AMSAT-BB)
- Orbit data (KEPS)
- Manned space missions (SAREX)
- District of Columbia area (AMSAT-DC)
- New England area (AMSAT-NE)
- AMSAT Educational Liaison mailing list (AMSAT-EDU)
- AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satelite Report Editor is James K. Darrow, KB9MMC.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:

AMSAT NEWS SERVICE
ANS-296

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:
ans-editor@amsat.org

In this edition:

* SSETI Express Readies for Launch October 27
* P3-E Satellite News and Project Report
* Jamboree on the Air Satellite Success
* Reminder of ARISS Resources on the Web
* ARISS Status for the Week of October 17, 2005
* AMSAT Awards

SB SAT @ AMSAT $ANS-296.01
SSETI Express Readies for Launch October 27

AMSAT News Service Bulletin 296.01

From AMSAT HQ SILVER SPRING, MD.
October 23, 2005
To All RADIO AMATEURS
BID: $ANS-296.01

The SSETI Express satellite is still scheduled to launch at 06:52 UTC on Thursday, October 27 on board a Kosmos 3M launcher.

The launch team arrived in Moscow and next completed an 18 hour journey by train to Plesetsk. The ISC (integrated system check) was completed satisfactorily within a couple of hours of powering up. All the systems are OK. The propulsion tank had maintained the required 300 bar pressure. Both UHF and S band radios were also tested - including the transponder and DTMF telemetry configurations.

Final battery charging was performed over the weekend. SSETI Express will be joined with the other four satellites on the launch adaptor on Monday, October 24. The launch adaptor will itself then be integrated onto the rocket.

Roll out of the complete launch vehicle at the launch complex (approx 40 kilometres away from the assembly facility) is scheduled for very early on Wednesday morning and its erection to the vertical position will take place around midday. The launch team will then pack up all the test gear and other equipment for its return to ESA ESTEC's facility in the Netherlands to await the launch to take place the following day!

A daily report of the launch campaign is being maintained at
http://sseti.gte.tuwien.ac.at/express/mop/index.php?uri=news.html
This mission operations site is completely up-to-date regarding Kepler TLEs and other LEOP "Launch and Early Operations Phase" details.

The SERACC software, needed to decode and submit the received data to the SSETI database, together with some audio files containing recorded 9k6 signals to experiment with is planned for release prior to launch.

There will be two SSETI Express competitions for radio amateurs. First is the unique "I heard it first" T shirt award; second is the prize for amateur who submits the largest amount of valid telemetry and payload data to the SSETI Express database before 1st February 2006. The telemetry prize, sponsored by ESA, is rather more valuable than just a T shirt - see the full details at:
http://sseti.gte.tuwien.ac.at/express/mop/index.php?uri=ham_contest.html

Full details of these events will be available on the Express mission website. This includes full information about the satellite, the ESA sponsored competition,and the plans for its use in the amateur satellite service. See:
http://sseti.gte.tuwien.ac.at/express/mop/

The ESA website about SSETI Express is at:
http://www.esa.int/SPECIALS/sseti_express/SEMARJ7X9DE_0.html

The latest version of the SSETI Express handbook can be downloaded
free of charge from the AMSAT-UK website at:
http://www.uk.amsat.org/

A live webstream of the ESA produced TV coverage of the launch is
going to be provided by Howard G6LVB at:
http://www.streamingwizard.com/clients/space.asx

The programming on the web stream is expected to commence at
approximately 06:00 UTC on launch day.

[ANS thanks Graham, UA/G3VZV for the above information]

/EX

SB SAT @ AMSAT $ANS-296.02
P3-E Satellite News and Project Report

AMSAT News Service Bulletin 296.02
From AMSAT HQ SILVER SPRING, MD.
October 23, 2005
To All RADIO AMATEURS
BID: $ANS-296.02

Peter Guelzow, DB2OS, President AMSAT-DL and the P3-E Project leader wrote a report to update radio amateurs about the progress of the satellite:

First of all I have to apologize for the little information about the P3-E progress over the last few months. Updates were provided during presentations at the recent AMSAT-UK Colloquium. We also publish news in the AMSAT-DL magazine which is also then reprinted in the AMSAT-NA Journal. To accomodate the delays inherent in these publishing media we will provide information via the AMSAT-DL website and e-mail such as the AMSAT-BB.

To improve communications with our membership and worldwide audience, AMSAT-DL decided to improve the information flow on our website using a new content management system (CMS, Mambo). Unfortunately this took much longer than anticipated, but the new portal should be available to the public by December.

The CMS itself is almost fully functional, but we have to transfer and re-edit all the information from our old website. As you can probably imagine, this is still a lot of work. However, once it is running, we hope to put more information on-line and also have a news section with more regular updates. Indeed, because of this, we almost stopped updating the old website.

So far, AMSAT P3-E is making good progress, but slowly. Some modules have already arrived in Marburg for integration, but other module builders are making use of the additional time due to the yet unknown launch date.

The wiring harness is defined and will be built and integrated into the spacecraft soon. Thanks to the CAN-bus and our CAN-DO module controllers, it will be not such a big beast as on previous P3 satellites.

Additional radiation testing has been performed on the CAN-DO. The CAN-DO module and other selected electronic components for P3-E and P5-A were exposed to protons with an energy of 60 MeV. The CAN-DO module stopped operating at 61 krad, which is good for a projected mission duration of more than 10 years. Since the CAN-DO module is one of the most critical parts on P3-E and P5-A, this gives us a better feeling that it should not suffer from radiation induced failure. Aradiation test is also planned for the IHU-3 within the next couple of weeks.

Very good progress was also reported from the development teams of the new IHU-3, both in terms of hardware and software. While a big step forward was made, the full integration and testing of the operational IPS software and all it's functionality (including the turbo codes and software defined modems) is the next step.

In addition to the analog transponders flying on P3-E, we will also look into the possibility to have an SDT (software defined transponder) flying on P3-E for the first time. The recent developments on Software Defined Radio technologies and STELLA, may give us completely new ideas. While this is quite late and various details must still be discussed, the necessary RF interfaces are already available in the module space. Expect to hear more about this in the future updates.

An extremely critical step was taken a few days ago when Ariane 5 scored a double success for Arianespace with the successful launch of Syracuse 3A and Galaxy 15 on-board flight V168.

While we do not yet have an official launch manifest, we are in full contact with our partners at Arianespace. Everyone is working hard to find a suitable slot for P3-E to the benefit of both sides. While the year 2005 is almost over, our target to get P3-E into orbit is still 2006 and will remain so. Clearly, the continuing success of the new Ariane 5 will help us too.   Initial arrangements for environmental testing, including vibration and thermal vacuum testing are already made.

Indeed, we still need a lot of support for P3-E and donations. But with all the contributions we are receiving, P3-E will be truly another international satellite. I'm in particular delighted, that AMSAT-NA joined and supports the P3-E project. We have excellent personal relationship between our organisations and apart from the fun, things are developing really good to the benefit of EAGLE, P3-E and all the projects on the horizon.

[ANS thanks Peter Guelzow, DB2OS, President AMSAT-DL, P3-E Project leader for the above information]

/EX

SB SAT @ AMSAT $ANS-296.03
Jamboree on the Air Satellite Success

AMSAT News Service Bulletin 296.03
From AMSAT HQ SILVER SPRING, MD.
October 23, 2005
To All RADIO AMATEURS
BID: $ANS-296.03

Lee McLamb, KU4OS, reported that Troop 393 in Merritt Island, FL had an excellent time working the satellites at station W4J during the Saturday, October 15 International Scouting Jamboree on the Air.

Lee wrote, "We made 11 contacts on SO-50 and AO-51. Two Scouts also got to talk with Commander William McArthur who was calling CQ JOTA from NA1SS which resulted resulted in a lot of whooping and jumping around after each ISS pass."

Helping the Scouts with the satellites at W4J were Don AG4FC, George KF4XB and Lee KU4OS. We kept things very simple using HTs, Arrow or home brew antennas and a 2m rig in the car with a 1/4 wave whip.

Emily Clarke, W0EEC, was staffing the AMSAT booth at the Pacificon Hamfest, and invited the JOTA Scouts to use the satellite station. Several came over, but only one took the microphone. Scout Matthew made contacts on AO-51. He and his parents were so excited they came back and Matthew again took the microphone on VO-52.

This was the first time we were in a position to have JOTA on Sats, so we learned that a) kids are shy and b) they aren't as spontaneous as we are. Matt was very cool and his parents were very excited.

The ARRL Letter included JOTA reports via ISS from KD4SFF, KB9UPS, and N5VHO. Al, KD4SFF ("scouting for fun"), worked NA1SS while waiting for scouts to arrive at his JOTA operation at Paris Mountain State Park in Greenville, South Carolina. Commander Bill McArthur, aboard the ISS, obliged KD4SFF by sending his greetings to all scouts.

"Greeting to all the scouts worldwide. It's a thrill for us today to be participating in JOTA!" McArthur said from orbit.

Al, who is the South Carolina AMSAT Area Coordinator, says he recorded his QSO and replayed it to his scout group as well as to others he contacted during JOTA. "Everyone was thrilled to hear Bill's message from the ISS!" he said.

Steve, KB9UPS, was among the others lucky enough to snag a contact with NA1SS during JOTA weekend. Amateur Radio on the International Space Station (ARISS) Ham Radio Project Engineer Kenneth Ransom, N5VHO, said McArthur's JOTA participation "wowed scouts and other hams." Among others, NA1SS also worked stations in Ontario, Virginia, New York and Texas.

Ransom said he heard McArthur work special event station W4J on the second pass over the central part of North America.

ANS looks forward to publishing other JOTA success stories. Send your report to ans-editor@amsat.org and we will publish it here.

[ANS thanks Lee, KU4OS, and Emily, W0EEC, and the ARRL Letter for the above information]

/EX

SB SAT @ AMSAT $ANS-296.04
Reminder of ARISS Resources on the Web

AMSAT News Service Bulletin 296.04
From AMSAT HQ SILVER SPRING, MD.
October 23, 2005
To All RADIO AMATEURS
BID: $ANS-296.04

The ARISS schedule page will provide you with a listing of all scheduled school contacts and questions, other ISS related websites, IRLP and Echolink websites, and instructions for any contact that may be streamed live. See:
http://www.amsat.org/amsat/ariss/news/arissnews.txt

The successful school list is available at:
http://www.amsat.org/amsat/ariss/news/Successful_ARISS_schools.rtf

An ISS Amateur Radio frequency chart for packet, voice, and crossband repeater modes (also showing Doppler correction can be viewed at:
http://www.amsat.org/amsat/ariss/news/ISS_frequencies_and_Doppler_correction.rtf

You can find a listing of ARISS related magazine articles at:
http://www.amsat.org/amsat/ariss/news/ARISS_magazine_articles.rtf

[ANS thanks Charlie, AJ9N for the above information]

SB SAT @ AMSAT $ANS-296.05
ARISS Status for the Week of October 17, 2005

AMSAT News Service Bulletin 296.05
From AMSAT HQ SILVER SPRING, MD.
October 23, 2005
To All RADIO AMATEURS
BID: $ANS-296.05

1. Upcoming School Contacts

Tomioka Elementary School of Urayasu in Urayasu City, Chiba, Japan has been scheduled for an ARISS contact. It will take place on Friday, October 28 at 10:36 UTC.

2. Article on Fort Hamilton High School Contact

On Thursday, October 6, students from Fort Hamilton High School in Brooklyn, New York enjoyed a contact with Greg Olsen, KC2ONX. The New York Daily News covered the event in a story, "Students get an astro-dinary call." See:
http://www.nydailynews.com/10-07-2005/news/local/story/353274p-301193c.html

3. JOTA 2005

Bill McArthur, KC5ACR, wowed scouts and other hams as he participated in the 2005 Jamboree on the Air (JOTA) held on October 15-16. Stations from New York and South Carolina reported contacts with the ISS. This annual event encourages both Boy Scouts and Girl Scouts to become involved in amateur radio.

4. Astronaut Training

Astronauts Nicole Stott and Garrett Reisman were scheduled to attend an amateur radio license training session on October 18.

[ANS thanks Carol, KB3LKI for the above information]

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that SO-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz. The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10 minute timer.

=====
FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

John, N4QWL reports on July 16th, 2005:

Last evening I had a AOS to LOS qso with WI2W. FO-29 came up at 01:17z here in FM07 and I found WI2W and we chatted until 01:33z. The satellite was at 2 degrees elevation when I finally heard him start to crackle a bit. What a great QSO! To think that I watched this bird launch back in 1996 and it is still working so well is a real thrill. I believe I still have the video. I might just look for it and watch it again. Boy do I love this satellite stuff! Look for you all up there.

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will automatically analyze all digital telemetry from the satellite (such as

current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[ANS-WSR wishes to thanks John, N4QWL for this week's report]

INTERNATIONAL SPACE STATION (ISS) - ARISS
Catalog number: 25544

Launch date: November 20, 1998

Status: Operational
Current Mode: U/V CROSS-BAND REPEATER
Digipeater: Inactive

The current Expedition 12 crew is:
Commander: William McArthur - KC5ACR
Flight Engineer: Valery Tokarev - (no call)

Worldwide packet uplink: 145.990 MHz FM
Region 1 voice uplink: 145.200 MHz FM
Region 2/3 voice uplink: 144.490 MHz FM
Worldwide downlink: 145.800 MHz FM

Repeater Uplink: 437.800 MHz FM
Repeater Downlink: 145.800 MHz FM
Doppler Shift is 10 KHz

Russian callsigns: RS0ISS, RZ3DZR
USA callsign: NA1SS
Packet station mailbox callsign: RS0ISS-11
Packet station keyboard callsign: RS0ISS-3
Digipeater callsign: ARISS

The ISS daily crew schedule can be found at:

SB SAT @ AMSAT <KB9MMC $ANS-296.S2
WSR 296 Part 2 10/23/2005

AMSAT NEWS SERVICE BULLETIN 296.S2 FROM AMSAT HQ
SILVER SPRING, MD, OCTOBER 23, 2005
TO ALL RADIO AMATEURS
BID: $ANS-296.S2

PCSAT2 ?0-??
Catalog Number:
Launch Date: August 1, 2005

Status: Operational

PCSAT2 was installed on the exterior of the International Space Station and was activated on August 3, 2005.

PCSAT2 CAPABILITIES: PCSAT2 is attached to the ISS and so its operations must be in cooperation with the ARISS communications suite to minimize any mutual interference and to coordinate activities. Here are the capabilities of the PCSAT2 and ARISS payloads:

PCSAT SYSTEM A:

435.275 PCSAT2 DOWNLINK 1200 baud packet with uplink on 145.825
435.275 PCSAT2 DOWNLINK Occasional user PSK-31 continuous downlink
145.825 PCSAT2 DOWNLINK 1200 baud packet

PCSAT SYSTEM B:

437.975 PCSAT2 DOWNLINK periodic Solar Cell data and PCSAT2 telemetry at 9600 baud
437.975 PCSAT2 DOWNLINK TNC-B command downlink at 1200 baud
437.975 PCSAT2 DOWNLINK User Voice Repeater with VHF uplink
437.975 PCSAT2 DOWNLINK Packet digipeater with VHF uplink

It looks like PCSAT2 can best contribute at this time by operating in PSK-31 mode for the near future. This is a very exciting new transponder mode which solves the congestion problem on FM repeaters by letting multiple stations all communicate at the same time.

PSK-31 users are welcome to try out the new PCSAT2 PSK-31 transponder on ISS with an uplink on 29.402 +/- 1 KHz and downlink on 435.275 +/- Doppler using FM.

The FM downlink lets everyone operate full duplex and everyone to see the same view of the passband as everyone else. THus you can see exactly what your signal looks like to everyone else.

Help Wanted:

Here is your chance to become a viable part of the Amateur Satellite Community.

We are looking for a volunteer satellite packet station in Hawaii that is interested in helping with telemetry and sat-gating of PCSAT2 and ARISS packets. Requirements are:

1) General familiarity with packet
2) TNC connected to a cross band radio that can RX on UHF and TX on VHF.
3) modest UHF beam and rotator system.

Contact WB4APR for more information.

Packets seen from PCSAT2 can be reviewed at:
http://www.findu.com/cgi-bin/pcsat2.cgi

A screen shot of both the 9600 bps and 1200 bps decoded data
as seen by Simon, 9W2QC, can be seen at:
http://www.9w2qc.net/pcsat2/

More information on PCSAT2 can be found at:
http://web.usna.navy.mil/~bruninga/pcsat2.html

[ANS-WSR thanks Bob, WB4APR and the U.S. Naval Academy Satellite Lab for
the aboveinformation.]

NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Non-Operational?????

Uplink/downlink: 145.827 MHz 1200 baud AX.25 AFSK via W3ADO-1
Aux/Uplink: 435.250 MHz 9600 baud via PCSAT-2 (off)
APRS Downlink: 144.390 MHz (Region 2)

PCSat is a 1200-baud APRS digipeater designed for use by stations using hand-held or mobile transceivers. Downlinks feed a central web site at:
http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy under the guidance of Bob Bruninga, WB4APR.
[07242005]

=====

CUTE-1
Catalog number: 27844
Launched: June 30,2003

Status: Operational

Uplink: ?
Downlink: 436.8375 CW
              437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ?)
Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as OPERATIONAL?
Indeed it is very operational as a CUBESAT sending CW telemetry on 436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at 14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz. Initial orbital parameters were period 101.4 min, apogee 831 km, perigee 819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

[ANS WSR wishes to thank Cliff, K7RR, for this week's information]

=====
UO-11 OSCAR-11
Catalog number: 14781
Launched: March 1, 1984

Status: Semi-operational?

Telemetry Downlink: 145.826 MHz. FM (1200-baud AFSK).

approx. 10 days ON, 10 days OFF
Mode-S Beacon: 2401.500 MHz. ... OFF
UHFBeacon: 435.025 MHz. ... OFF

OSCAR-11 is back! I received the good news, on Saturday morning, while at the AMSAT-UK Colloquium. This was entirely unexpected! On Sunday morning Bob G4VRC played me a recording of an early morning pass received that day.

During the period 21 July to 14 August 2005 consistent signals have been heard from 30 July to 08 August. Signals seem to be weaker than usual, confirmed by the many reports received. However,since I last heard the satellite on 30 April, I've reinstalled my antennas , which makes comparisons difficult.

Many thanks for all the recent reports of OSCAR-11 including those from KU7Z (who heard it first), KB2M, VK6XH, HK7MKE, KA2UPW, JE9PEL, G1OCN, HB9SKA and G8OQW.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working. One bit in channel 62, DSR mode, has changed from WRITE to READ. DSR is the Digital Store & Readout experiment. This could be significant if the experiment is still drawing current, but the other status bit indicates that it is switched OFF.

The on-board clock is now showing a very large error. It has lost approximately 19 days since 30 April. During the recent data collection period, the clock error has been changing at a decreasing rate. The size of the clock error and the rate at which it is changing is similar to the duration of the solar eclipse periods. This suggests that the clock might have been switching OFF during eclipses.

The eclipses have now ended, and the satellite should be in continuous sunlight for the remainder of this year, and well into next year. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures.

If the watchdog timer is still operating on a 20 day cycle, ie. approximately ten days ON followed by 10 days OFF, then the VHF beacon should resume transmissions around 18 August.

The Beacon frequencies are -

VHF 145.826 MHz. AFSK FM ASCII Telemetry

UHF 435.025 MHz. OFF

S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture.

There is software for capturing data, and decoding ASCII telemetry. The URL is www.users.zetnet.co.uk/clivew/

If you place this bulletin on a terrestrial packet network, please use the bulletin identifier $BID:U2RPT112.CWV, to prevent duplication.

[ANS-WSR thanks Clive, G3CWV, for the above information]

More information on UO-11 OSCAR-11 can be found at:
http://www.users.zetnet.co.uk/clivew/

SB SAT @ AMSAT <KB9MMC $ANS-296.S3
WSR 296 Part 3 10/23/2005

AMSAT NEWS SERVICE BULLETIN 296.S3 FROM AMSAT HQ
SILVER SPRING, MD, OCTOBER 23, 2005
TO ALL RADIO AMATEURS
BID: $ANS-296.S3

THE FOLLOWING ARE IN ORBIT BUT ARE
NON-OPERATIONAL AT THIS TIME:

POSAT-1 PO-28
Catalog Number: 22829
Launched : September 25, 1993

Status: Operational - Not open for Amatuer use

Downlink: 435.250 MHz
435.275 MHz

Uplink: 145.925 MHz
145.975 MHz

Broadcast callsign: POSAT1-11
BBS callsign: POSAT1-12

PO-28 (POSAT-1), Portugal's first satellite, launched 12 years ago, will be turned over to Amateur Radio use in the very near future. That was the word July 30 from AMSAT-UK Secretary Jim Heck, G3WGM, during the AMSAT-UK International Space Colloquium in Guildford, England.

Launched September 25, 1993, the satellite operated as a packet store-and-forward BBS (9600 baud FM FSK) on Amateur Radio frequencies for several weeks in early 1994. Over the years, PO-28's primary usage has been commercial, although plans have called for eventually shifting its operation to ham radio use. G3WGM reports that following lengthy negotiations it has been agreed that the satellite can be switched permanently to amateur frequencies. The changeover is expected to take a couple of weeks.

The Portuguese satellite was built at the University of Surrey as part of a collaborative satellite technology program that involved industry and academe. Uplink frequencies will be 145.925 and 145.975 MHz. Downlink frequencies will be 435.250 and 435.275 MHz. More information on PO-28 is on the AMSAT Web site
http://www.amsat.org/amsat/sats/n7hpr/po28.html.

```
Uplink Frequencies:   145.925 and 145.975 MHz
Downlink Frequencies: 435.250 and 435.275 MHz
```

Orbit: 822 x 800 km, 98.6 deg inclined, sun-synchronous.

Transponder capabilities include FM repeater and 38k4 data. If you want to hear how loud this satellite is, listen on 429.950 until the change back to amateur radio service.

Keplerian elements for PO-28 are not currently contained in the AMSAT keps bulletins, but can be found at Celestrak in amateur.txt using the name "POSAT". Users of Space Track should query the NORAD Satellite ID number 22829. The name listed by Space Track is "EYESAT A".

More information of POSAT-1 can be found at:
http://www.ee.surrey.ac.uk/SSC/CSER/UOSAT/missions/posat1.html
http://www.amsat.org/amsat/sats/n7hpr/po28.html
[ANS-WSR wishes to thanks Trevor, M5AKA and Jim, G3WGM, for this week's information.]

PO-34 PANSAT
Catalog number: 25520
Launched: October 30, 1998

Status: Telemetry downloads only

Uplink/downlink frequency (listed on the PanSat web site) 436.500 MHz

The satellite is not available for general uplink transmissions.

The Naval Postgraduate School developed PanSat. At the time of launch, PanSat spread-spectrum digital transponders were to be available to Amateur Radio operators along with software to utilize this technology.

The satellite is still operating, however, the spread spectrum packet radio portion never took place. The spacecraft is now beyond it's initial 2-year mission life, but telemetry records are still being downloaded.

For more information, visit the official PanSat web site at:
http://www.sp.nps.navy.mil/pansat/
[05092004]
=====
SO-33 SEDSAT-1
Catalog number: 25509
Launched: October 24, 1998

Status: Semi-operational

Downlink: 437.910 MHz FM (9600-baud FSK)

The satellite is not currently available for uplink transmissions and the image and transponder recovery efforts have been unsuccessful.

For more information on SedSat-1 visit the satellite web site:
http://seds.uah.edu/projects/sedsat/sedsat.htm

[ANS has no further information]
[05232004]
=====
SO-35 SUNSAT
Catalog Number: ?
Launched:February 23, 1999

STatus: Non-Operational

Downlink: Mode B Repeater: 436.291 MHz
          Mode J Digipeater: 436.250 MHz

Uplinks: Mode B Repeater: 145.825 MHz
         Mode J Digipeater: 145.825 MHz and 145.900 MHz

For more information of SUNSAT vist the satellite web site:
http://esl.ee.sun.ac.za/projects/sunsat/
[08082004]
=====
UO-36 UoSAT-12
Catalog number: 25693
Launched: April 21, 1999

Status: Unknown

```
Uplink:             145.960 MHz (9600-baud FSK)
Downlink:           437.025 MHz 437.400 MHz
Broadcast Callsign: UO121-11
BBS:                UO121-12

The VK5HI viewer shareware for UO-36 is available on the AMSAT-NA
web site at the following URL:
ftp://ftp.amsat.org/amsat/software/win32/display/ccddsp97-119.zip
[05092004]
=====
AO-40 AMSAT OSCAR 40
Catalog number: 26609
Launch Date: November 16, 2000

Status: Non-Operational

Uplink      V-band    145.840 -  145.990 MHz CW/LSB
            U-band    435.550 -  435.800 MHz CW/LSB
           L1-band   1269.250 - 1269.500 MHz CW/LSB
           L2-band   1268.325 - 1268.575 MHz CW/LSB
           S1-band   2400.350 - 2400.600 MHz CW/LSB
Downlink:  S2-band   2401.225 - 2401.475 MHz CW/USB
           K-band 24,048.010 - 24,048.060 MHz CW/USB
Beacon:    2401.323, 24,048.035
[05232004]
-----
SO-42  SAUDISAT-1B
Catalog number: 26549
Launched: September 26, 2000

Status: Non-Operational
 Downlink:           437.075 MHz
Broadcast Callsign: SASAT2-11
BBS:                SASAT2-12

NO-45 SAPPHIRE
Catalog number: 26932
Launch Date: September 30, 2001

Status: Non-Operational

Downlink: 437.095 MHz 1200 baud AX-25 AFSK
Uplink: 145.945 MHz UI Digipeater
Digi Callsign: KE6QMD

Everyone is welcome to use the digipeating/APRS features of Sapphire, callsign KE6QMD, as per the user service agreement located at the following URL:
http://web.usna.navy.mil/~bruninga/pcsat/contract.txt
[03132005]
=====
AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio anand telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at:
http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

AMSAT NEWS SERVICE BULLETIN 296.S4 FROM AMSAT HQ
SILVER SPRING, MD, OCTOBER 23,2005
TO ALL RADIO AMATEURS
BID: $ANS-296.S4

THE FOLLOWING SATELLITES ARE NOT IN ORBIT BUT ARE
PROPOSED FOR LAUNCH AT THIS TIME:

UCISAT ?O-??
Catalog number:
Proposed Launch Date: October 31, 2005

Status: Under Construction

Downlink: Submission in Progress
Uplink: Submission in Progress
Callsign: Submission in Progress

This from Matt Bennett, KF6RTB, UCISAT Communications Team Member:

Our website is www.ucisat.net .This is a new website, however, and doesn't have the "Status" section active yet. Because of the growing interest in our project, I'll push our webmaster to create updates (hopefully) on a week-to-week basis. For now, the current status of the mission is as follows:

-Expected Launch Date: October 31st, 2005
-Frequency Allocation: Submission in Progress
-Construction Status: Sub-Assembly
[WSR to thank Matt Bennett, KF6RTB, for this week's report.]
[01302005]
=====
SSETI ?O-??
Catalog Number:
Proposed Launch Date: October 27, 2005

Status: AWAITING LAUNCH

Graham, G3VZV reports:

The SSETI Express satellite is still scheduled to launch at 06:52 UTC on Thursday, October 27 on board a Kosmos 3M launcher.

The launch team arrived in Moscow and next completed an 18 hour journey by train to Plesetsk. The ISC (integrated system check) was completed satisfactorily within a couple of hours of powering up. All the systems are OK. The propulsion tank had maintained the required 300 bar pressure. Both UHF and S band radios were also tested - including the transponder and DTMF telemetry configurations.

Final battery charging was performed over the weekend. SSETI Express will be joined with the other four satellites on the launch adaptor on Monday, October 24. The launch adaptor will itself then be integrated onto the rocket.

Roll out of the complete launch vehicle at the launch complex (approx 40 kilometres away from the assembly facility) is scheduled for very early on Wednesday morning and its erection to the vertical position will take place around midday. The launch team will then pack up all the test gear and other equipment for its return to ESA ESTEC's facility in the Netherlands to await the launch to take place the following day!

A daily report of the launch campaign is being maintained at
http://sseti.gte.tuwien.ac.at/express/mop/index.php?uri=news.html
This mission operations site is completely up-to-date regarding Kepler TLEs and other LEOP "Launch and Early Operations Phase" details.

The SERACC software, needed to decode and submit the received data to the SSETI database, together with some audio files containing recorded 9k6 signals to experiment with is planned for release prior to launch.

There will be two SSETI Express competitions for radio amateurs. First is the unique "I heard it first" T shirt award; second is the prize for amateur who submits the largest amount of valid telemetry and payload data to the SSETI Express database before 1st February 2006. The telemetry prize, sponsored by ESA, is rather more valuable than just a T shirt - see the full details at:
http://sseti.gte.tuwien.ac.at/express/mop/index.php?uri=ham_contest.html

Full details of these events will be available on the Express mission website. This includes full information about the satellite, the ESA sponsored competition,and the plans for its use in the amateur satellite service. See:
http://sseti.gte.tuwien.ac.at/express/mop/

The ESA website about SSETI Express is at:
http://www.esa.int/SPECIALS/sseti_express/SEMARJ7X9DE_0.html

The latest version of the SSETI Express handbook can be downloaded free of charge from the AMSAT-UK website at:
http://www.uk.amsat.org/

A live webstream of the ESA produced TV coverage of the launch is going to be provided by Howard G6LVB at:
http://www.streamingwizard.com/clients/space.asx

The programming on the web stream is expected to commence at approximately 06:00 UTC on launch day.

[ANS thanks Graham, UA/G3VZV for the above information]

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
        888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satelite Report Editor is James K. Darrow, KB9MMC.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

SSETI Launch Offers Exciting Listening Opportunities
The SSETI Express satellite is scheduled to launch at 06:52 UTC on Thursday, October 27 on board a Kosmos 3M launcher. Shortly after launch amateur radio operators around the world will have an exciting opportunity to begin receiving signals from four new satellites.

This is a quick listening guide to the frequencies expected to be used. The latest version of the SSETI Express handbook, which can be downloaded free of charge from the AMSAT-UK website contains full operational details. Visit http://www.uk.amsat.org/ to download your own copy.

Commencing at approximately 06:00 UTC on launch day, a live webstream of the ESA produced TV coverage of the launch is going to be provided by Howard G6LVB at:
http://www.streamingwizard.com/clients/space.asx

SSETI Express will coast for 74 minutes after orbital injection to ensure a good separation between SSETI Express and the other passengers and will then automatically deploy three Cubesats.

SSETI Express will have two main downlinks:
437.250 MHz @ 3 watts for 9600 baud FSK packets
2401.835 MHz @ 0.7 - 1.5 watts for 38400 bps FSK packets

The 2.4GHz-downlink transmitter will be mainly used to transmit picture data at rate of 38k4. However, it will be switched over to single channel FM U/S voice transponder operation occasionally as part of the payload cycle.

Here is a summary of the three Cubesats providing radio amateurs worldwide opportunities to hear the new spacecraft ...

Ncube-2

The Norwegian student satellite, Ncube-2 is an experimental spacecraft that was developed and built by students from four Norwegian universities. Data transmissions and digipeater use 1200 and 9600 bps.

Downlink 437.305 @ 1.5 watts. The first transmissions will be 20 minutes after separation from SSETI Express. The message: "DE LA1CUB NCUBE2 FF LA1CUB" will be sent in morse at 26 words per minute using a 2400Hz tone.

At the end of the message an unnumbered AX.25 packet is sent containing the string: DE LA1CUB NCUBE2 NORWEGIAN CUBESAT - WWW.NCUBE.NO . The AX.25 header will include Callsign: NCUBE, and Destination: EARTH.

UWE-1

The UWE-1 spacecraft is a registered Pico-satellite of Julius Maximilians Universitaet Wuerzburg, Germany. Its research aim is to test IP based telecommunications protocols in space.

Downlink 437.505 @ 1.0 watts. The communication protocol is AX25. The satellite will transmit for about 1 sec every 1 minute.

XI-V

The XI-V satellite is a Pico-satellite of the University of Tokyo, Intelligent Space Systems Laboratory.

Downlink (telemetry) 437.345 @ 0.8 watts sending AFSK AX.25, 1200bps
Downlink (beacon) 436.465 @ 0.08 watts CW repeating every 30 seconds

The homepage for SSETI Express is at:
http://sseti.gte.tuwien.ac.at/express/mop/

The SERACC software, needed by radio amateurs to decode the telemetry and payload data from SSETI and to submit it to the main SSETI Express central database is available for download at:

http://sseti.gte.tuwien.ac.at/express/mop/index.php?uri=downloads.html

HamPoll is here in order to give amateurs a chance to speak for themselves, and in time to provide reasonably accurate and significant polling data on a variety of issues related to the amateur radio service.

You are welcome to browse the polling data we have, but we especially encourage US amateurs visiting here to register with thier callsign and vote in the HamPoll Polling Station.

Whether you come to browse, to discuss or submit new polls, or to tender your vote, be sure to visit regularly as new polls are included from time to time, and the poll data changes as more hams participate day to day.

Stop by at: http://www.hampoll.com

SB SAT @ AMSAT $ANS-303.01
SSETI Express Launched 30 September 2005

AMSAT News Service Bulletin 303.01
From AMSAT HQ SILVER SPRING, MD.
October 30, 2005
To All RADIO AMATEURS
BID: $ANS-303.01

The SSETI Express satellite launched at 06:52 UTC on Thursday, 27 October 2005 on board a Kosmos 3M launcher. One hundred and three minutes later, exactly on schedule, the first signals were heard form the groundstation in Aalborg, and two-way communication was established. In addition to several successful communication sessions with SSETI Express, two of the Cubesat passengers, UWE-1 and Xi-V, have been heard by their groundstations.

An official release from ESA stated, "22:20 CEST SSETI Express went into a safe mode due to an undervoltage caused by battery charging problems. The operations team is working actively to resume nominal operations of the satellite and is receiving tremendous help in the process from the amateur radio community. At the time of the anomaly many mission milestones had already successfully
been met."

Graham, UA/G3VZV reports, "that it seems that no reliable reports of any signals have been received and the teams are reviewing all the telemetry already received to fully understand what is happening on board.Initial review suggests that there is a significant chance that the power supply problem may correct itself." Graham also advises that the command station in Aalborg is planning to try to try a blind command of the satellite into S band on mode - maybe on a Sunday am pass at 10:30 UTC.

As the statement above makes clear, ESA and the SSETI Association greatly value the input that amateur operators are providing and would ask amateurs around the world to continue to check for signals on 437.250MHz at the appropriate pass times. These signals may be short bursts of 9k6 data every 18 secs or bursts of pulse telemetry every 30 secs. Please understand that the pulse beacon decoder can produce spurious results on plain noise if over driven!

Anyone hearing anything that matches the above detail is requested to please email details to missioncontrol@sseti.org

The type of the first transmissions will depend on the state of the battery.

In Nominal mode - a sub 1 second burst of AX25 9k6 FSK telemetry every 18 seconds on the downlink frequency of 437.250 MHz.

In Recovery or Safe mode - simple on/off telemetry comprising 16 x 100 msec carrier pulses. This telemetry is repeated every 30 seconds in Safe Mode and every 2 minutes when in Recovery Mode.

The satellite will transmit at a power of 3 watts.

A daily report of the launch campaign is being maintained at
http://sseti.gte.tuwien.ac.at/express/mop/index.php?uri=news.html This mission operations site is completely up-to-date regarding Kepler TLEs and other LEOP "Launch and Early Operations Phase" details.

The SERACC software, needed to decode and submit the received data to the SSETI database, together with some audio files containing recorded 9k6 signals to experiment with is also now available

The ESA website about SSETI Express is at:
http://www.esa.int/SPECIALS/sseti_express/SEMARJ7X9DE_0.html

The latest version of the SSETI Express handbook can be downloaded free of charge from the AMSAT-UK website at:
http://www.uk.amsat.org/

[ANS thanks Graham, UA/G3VZV and Trevor, M5AKA for the above information]

SB SAT @ AMSAT $ANS-303.02
Urgent Reguest for UWE-1 Data

AMSAT News Service Bulletin 303.02
From AMSAT HQ SILVER SPRING, MD.
October 30, 2005
To All RADIO AMATEURS
BID: $ANS-303.02

Radu, with the UWE-1 Team in Wuerzburg, Germany reports that they have a very serious situation and need immeadiate assistance copying UWE-1 telemetry data. Due to the extremely unfavorable weather conditions in Wuerzburg (heavy clouds and very thick fog, with visibility sometimes less than 10 m), we were not able to decode much of the sensor data from UWE-1 during the last two passes over our ground station. We have already prepared a list with new equipment we need for the GS, but it might take a while to get it, as 0 1 November 2005 is a national bank holiday in Germany.

The command station is able to send commands to the satellite and can receive the answers, but the signals received were S2-S3 level on the S-meter. The last reliable data is already 30 hours old. They urgently need some beacon data in order to characterize the status of the subsystems and decide how to continue the mission.

UWE-1 is sending one beacon every 60[sec] on 437.505+- MHz, 1200baud AFSK. One beacon is 33 bytes long. The UWE-1 team would be very happy to receive also raw (.hex) data, we can decode them here. Please send the data to: cubesat@informatik.uni-wuerzburg.de. Thank you very much!

Please forward this email to everyone able to help us with some new data.

Thank you very much for your support!

[ANS thanks Radu for the above information]

/EX

SB SAT @ AMSAT $ANS-303.03
New Eagle Project Information

AMSAT News Service Bulletin 303.03
From AMSAT HQ SILVER SPRING, MD.
October 30, 2005
To All RADIO AMATEURS
BID: $ANS-303.03

New and updated information about the Eagle HEO satellite project is now available at
http://www.amsat.org/amsat-new/eagle/

The new information is about the IHU-3 (Internal Housekeeping Unit - Version 3) which is the brains behind Eagle and is an open source, open design component. The IHU-3 link contains the source code archives and documentation for projects and developers incorporating the IHU-3 into their system designs.

There is also a link to the Can-Do website operated by Steve Moraco, KC0FTQ which contains reference documents, firmware updates, programming libraries, schedules and milestones for all aspects of the Can-Do bus, modules, widgets and other components. The Can-Do is the interconnection bus that connects all Eagle modeules to the IHU.

SB SAT @ AMSAT $ANS-303.04
OSCAR 11 Report - 25 October 2005

AMSAT News Service Bulletin 303.04
From AMSAT HQ SILVER SPRING, MD.
October 30, 2005
To All RADIO AMATEURS
BID: $ANS-303.04

During the period 24 September to 25 October 2005 the VHF beacon on 145.826MHz resumed transmissions, as expected, on 30 September, sometime between 06:05 and 06:42 UTC passes. Reasonable signals were also captured on the 17:44 pass, later that day. However by the 16:49 UTC pass on 02 October, the beacon had switched OFF. Transmissions resumed on 21 October, and should continue until around 31 October.

The on-board clock continues to show a very large error. Currently it is 19.2394 days slow, having lost six hours while the beacon was last OFF, ie. between 02 October and 21 October. When the beacon is ON, the clock is stable to within a few seconds.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working.

The eclipses have now ended, and the satellite should be in continuous sunlight for the remainder of this year, and well into next year. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures.

The watchdog timer appears to be operating on the 20 day cycle, ie. approximately ten days ON followed by 10 days OFF. It appears to be uneffected by problems of the on-board clock. However, poor solar attitude, and battery problems, may be combining to produce a low line voltage. This causes the beacon to switch OFF premeaturely, and resets the watchdog timer cycle.

The Beacon frequencies are -
VHF 145.826 MHz. AFSK FM ASCII Telemetry
UHF 435.025 MHz. OFF
S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is
www.users.zetnet.co.uk/clivew/

If you place this bulletin on a terrestrial packet network, please use the bulletin identifier $BID:U2RPT114.CWV, to prevent duplication.

SB SAT @ AMSAT $ANS-303.05
AMSAT Awards

AMSAT News Service Bulletin 303.05
From AMSAT HQ SILVER SPRING, MD.
October 30, 2005
To All RADIO AMATEURS
BID: $ANS-303.05

This week, congratulations go out to all of the following.

Allen Kenny, KK4EMK, Satellite Communicators Club
Robert Tucker, WA6MBL, Satellite Communicators Club

Allen Kenny, KK4EMK, Satellite Communication Achievement Award #423
Marc Sanchez, KD5MSS, Satellite Communication Achievement Award #424

Allen Kenny, KK4EMK, 51 on 51 Award #38

Marc Sanchez, KD5MSS, South Africa Communication Achievement Award

To see all the awards visit http://www.amsat.org or http://www.amsatnet.com

[ANS thanks Bruce KK5DO, for the above information]

SB SAT @ AMSAT $ANS-303.06
ARISS Status - 24 October 2005

AMSAT News Service Bulletin 303.06
From AMSAT HQ SILVER SPRING, MD.
October 30, 2005
To All RADIO AMATEURS
BID: $ANS-303.06

1. Upcoming School Contacts

Kawachi Citizen's Committee for Youth in Miyoshi, Hiroshima, Japan has been approved for a contact on Thursday, 03 November 2005 at 0744 UTC.

2. ARRL Article on JOTA 2005

Over the weekend of 15-16 October, astronaut Bill McArthur, KC5ACR, participated in the 2005 Jamboree on the Air (JOTA). Since then, Bill has been active on voice, and has continued to thrill hams worldwide. ARRL covered the JOTA event in a web story entitled, "ISS Astronaut Gets in the JOTA Spirit." See:
http://www.arrl.org/news/stories/2005/10/21/4/?nc=1

3. Astronaut Training

Astronauts Nicole Stott and Garrett Reisman attended their first amateur radio license training session on 18 October. They were scheduled for their second session on Wednesday, 26 October 26. On 17 October 17, Bob Behnken took and passed his amateur radio exam. He received his callsign, KE5GGX, and is currently in the selection pool for future ISS expedition crews. Congratulations Bob!

4.Expedition 11 Crew Debrief

The U.S. debrief session with Expedition 11 crew member John Phillips, KE5DRY, is tentatively scheduled for Tuesday, 08 November at 2100 UTC.

5. WebTech.com Article on ARISS

ARISS delegate Rosalie White sat for an interview with Web-Tech.com to discuss the ARISS program. The online story is available on their website. See:
http://www.personaltechpipeline.com/showArticle.jhtml?articleID=171204199

6. School Selection Committee Meeting Held

Rosalie White held a School Selection Committee teleconference on 13 October 2005. Discussions included the NEEIS database, which will reopen in mid-October for teachers to finish entering their evaluations, and the possibility of Bill McArthur participating in two ARISS contacts per week, which could reduce the backlog of U.S. schools waiting for a contact. Meeting minutes will be posted on the ARISS website in the near future. The next committee meeting is scheduled for 08 December 2005.

7. Space.com Article on Olsen

Space.com wrote an article covering Greg Olsen's flight to the ISS. The story mentions his ARISS contacts with school children and the importance of sharing his flight with others to excite their imaginations. See:
http://space.com/missionlaunches/051017_olsen_us.html

8. ARISS - Eindhoven Contact

Dutch astronaut Andre Kuipers, PI9ISS, flew to the ISS with Expedition 9 crew members in conjunction with the Dutch Expedition for Life science, Technology and Atmospheric research (DELTA) Mission. On April 25, 2004, Kuipers participated in an ARISS contact with students from three schools: Saltoschool Hanevoet (primary school), Sint Joriscollege (secondary school) and Technische Universiteit Eindhoven (university). The students who were selected for the contact gathered in the radio room of the Amateur Radio Club of the Technical University of Eindhoven (PI4TUE), the Netherlands. The contact was a success. A short article on the contact has recently been made available to the ARISS team, complete with photos and links to audio and video. See:
http://home.vianetworks.nl/users/hamoen/pa3guo/ariss_contact.html

[ANS thanks Carol, KB3LKI for the above information]

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that SO-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz. The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10 minute timer.

[09122004]

=====

FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

John, N4QWL reports on July 16th, 2005:

Last evening I had a AOS to LOS qso with WI2W. FO-29 came up at 01:17z here in FM07 and I found WI2W and we chatted until 01:33z. The satellite was at 2 degrees elevation when I finally heard him start to crackle a bit. What a great QSO! To think that I watched this bird launch back in 1996 and it is still working so well is a real thrill. I believe I still have the video. I might just look for it and watch it again. Boy do I love this satellite stuff! Look for you all up there.

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will automatically analyze all digital telemetry from the satellite (such as current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/

[ANS-WSR wishes to thanks John, N4QWL for this week's report]
[07172005]
=====
AO-27 AMRAD
Catalog number: 22825
Launched: September 26, 1993

Status: Operational

Uplink: 145.850 MHz FM
Downlink: 436.795 MHz FM

The latest information on AO-27 from control operator Michael Wyrick,
N3UC (former N4USI), can be found at:
http://www.ao27.org

An AO-27 question-and-answer page is available on the AMSAT-NA web
site, with updates by Ray, W2RS. The URL is:
http://www.amsat.org/amsat/intro/ao27faq.html

[ANS-WSR thanks John, K6YK, for this week's AO-27 report]
[08292004]
=====
AO-7 AMSAT OSCAR 7
Catalog number: 07530
Launch Date: November 15, 1974

Status: Semi-operational in sunlight.
Return to active status: June 21,2002

Uplink: 145.850 to 145.950 MHz CW/USB Mode A
            432.125 to 432.175 MHz CW/LSB Mode B
Downlink: 29.400 to 29.500 MHz CW/USB Mode A
            145.975 to 145.925 MHz CW/USB Mode B
Beacon: 29.502 MHz, 145.972 MHz, 435.1 MHz, 2304.1 MHz

Emily, W0EEC has created a website to allow the users of AO-7 to record
contacts, observations and use of the satellite more effectively at:
http://www.emilyshouse.com/experthams/ao7/main.php
This includes the ability to log contacts.

Tim, K3TZ has written a program to decode AO-07 telemetry.
The program can be downloaded at:
http://www.qsl.net/k3tz/files/K3TZ_AO-07_Telemetry_Decoder_0.5.zip

For more AO-7 info:

SB SAT @ AMSAT <KB9MMC $ANS-303.S2
WSR 303 Part 2 10/30/2005

AMSAT NEWS SERVICE BULLETIN 303.S2 FROM AMSAT HQ
SILVER SPRING, MD, OCTOBER 30, 2005
TO ALL RADIO AMATEURS
BID: $ANS-303.S2

PCSAT2 ?0-??
Catalog Number:
Launch Date: August 1, 2005

Status: Operational

PCSAT2 was installed on the exterior of the International Space Station and was activated on August 3, 2005.

PCSAT2 CAPABILITIES: PCSAT2 is attached to the ISS and so its operations must be in cooperation with the ARISS communications suite to minimize any mutual interference and to coordinate activities. Here are the capabilities of the PCSAT2 and ARISS payloads:

PCSAT SYSTEM A:

435.275 PCSAT2 DOWNLINK 1200 baud packet with uplink on 145.825
435.275 PCSAT2 DOWNLINK Occasional user PSK-31 continuous downlink
145.825 PCSAT2 DOWNLINK 1200 baud packet

PCSAT SYSTEM B:

437.975 PCSAT2 DOWNLINK periodic Solar Cell data and PCSAT2 telemetry at 9600 baud
437.975 PCSAT2 DOWNLINK TNC-B command downlink at 1200 baud
437.975 PCSAT2 DOWNLINK User Voice Repeater with VHF uplink
437.975 PCSAT2 DOWNLINK Packet digipeater with VHF uplink

It looks like PCSAT2 can best contribute at this time by operating in PSK-31 mode for the near future. This is a very exciting new transponder mode which solves the congestion problem on FM repeaters by letting multiple stations all communicate at the same time.

PSK-31 users are welcome to try out the new PCSAT2 PSK-31 transponder on ISS with an uplink on 29.402 +/- 1 KHz and downlink on 435.275 +/- Doppler using FM.

The FM downlink lets everyone operate full duplex and everyone to see the same view of the passband as everyone else. THus you can see exactly
what your signal looks like to everyone else.

Help Wanted:

Here is your chance to become a viable part of the Amateur Satellite Community.

We are looking for a volunteer satellite packet
station in Hawaii that is interested in helping with
telemetry and sat-gating of PCSAT2 and
ARISS packets. Requirements are:

1) General familiarity with packet
2) TNC connected to a cross band radio that
   can RX on UHF and TX on VHF.
3) modest UHF beam and rotator system.

Contact WB4APR for more information.

Packets seen from PCSAT2 can be reviewed at:
http://www.findu.com/cgi-bin/pcsat2.cgi

A screen shot of both the 9600 bps and 1200 bps decoded data
as seen by Simon, 9W2QC, can be seen at:
http://www.9w2qc.net/pcsat2/

More information on PCSAT2 can be found at:
http://web.usna.navy.mil/~bruninga/pcsat2.html

[ANS-WSR thanks Bob, WB4APR and the U.S. Naval Academy Satellite Lab for
the aboveinformation.]

CUTE-1
Catalog number: 27844
Launched: June 30,2003

Status: Operational

Uplink: ?
Downlink: 436.8375 CW
437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ?)
Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as OPERATIONAL?
Indeed it is very operational as a CUBESAT sending CW telemetry on 436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at 14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz. Initial orbital parameters were period 101.4 min, apogee 831 km, perigee 819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

[ANS WSR wishes to thank Cliff, K7RR, for this week's information]

=====
MO-46 TIUNGSAT-1
Catalog number: 26548
Launched: September 26, 2000

Status: Operational

Uplink: 145.850 or 145.925 MHz 9600-baud FSK
Downlink: 437.325 MHz
Broadcast callsign: MYSAT3-11
BBS: MYSAT3-12

TiungSat-1 is Malaysia's first micro-satellite and in addition to
commercial land and weather imaging payloads offers FM and FSK
Amateur Radio communication.

TiungSat-1, named after the mynah bird of Malaysia, was developed as
a collaborative effort between the Malaysian government and Surrey
Satellite Technology Ltd.
[05152005]
=====
AO-16 PACSAT
Catalog number: 20439
Launch Date: January 22, 1990

Status: Semi-operational, the digipeater command is on and open for
APRS users.

Uplink: 145.90 145.92 145.94 145.96 MHz FM
                     (using 1200-baud Manchester FSK)
Downlink: 437.026 MHz SSB (1200-baud PSK)
Mode-S Beacon: 2401.1428 MHz
Broadcast Callsign: PACSAT-11
BBS: PACSAT-12

A WOD collection of current graphics along with general information
and telemetry samples can be found at:
http://www.telecable.es/personales/ea1bcu

=====
UO-11 OSCAR-11
Catalog number: 14781
Launched: March 1, 1984

Status: Semi-operational?

Telemetry Downlink: 145.826 MHz. FM (1200-baud AFSK).
                    approx. 10 days ON, 10 days OFF
Mode-S Beacon: 2401.500 MHz. ... OFF

UHFBeacon: 435.025 MHz. ... OFF

During the period 24 September to 25 October 2005 the VHF beacon on 145.826MHz resumed transmissions, as expected, on 30 September, sometime between 06:05 and 06:42 UTC passes. Reasonable signals were also captured on the 17:44 pass, later that day. However by the 16:49 UTC pass on 02 October, the beacon had switched OFF. Transmissions resumed on 21 October, and should continue until around 31 October.

The on-board clock continues to show a very large error. Currently it is 19.2394 days slow, having lost six hours while the beacon was last OFF, ie. between 02 October and 21 October. When the beacon is ON, the clock is stable to within a few seconds.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working.

The eclipses have now ended, and the satellite should be in continuous sunlight for the remainder of this year, and well into next year. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures.

The watchdog timer appears to be operating on the 20 day cycle, ie. approximately ten days ON followed by 10 days OFF. It appears to be uneffected by problems of the on-board clock. However, poor solar attitude, and battery problems, may be combining to produce a low line voltage. This causes the beacon to switch OFF premeaturely, and resets the watchdog timer cycle.

The Beacon frequencies are -
VHF 145.826 MHz. AFSK FM ASCII Telemetry
UHF 435.025 MHz. OFF
S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is
www.users.zetnet.co.uk/clivew/

If you place this bulletin on a terrestrial packet network, please use the bulletin identifier $BID:U2RPT114.CWV, to prevent duplication.

[ANS thanks Clive G3CWV for the above information]

BID: $ANS-303.S3

THE FOLLOWING ARE IN ORBIT BUT ARE
NON-OPERATIONAL AT THIS TIME:

POSAT-1 PO-28
Catalog Number: 22829
Launched : September 25, 1993

Status: Operational - Not open for Amatuer use

```
Downlink: 435.250 MHz
          435.275 MHz

Uplink:   145.925 MHz
          145.975 MHz
```

Broadcast callsign: POSAT1-11
BBS callsign: POSAT1-12

PO-28 (POSAT-1), Portugal's first satellite, launched 12 years ago, will be turned over to Amateur Radio use in the very near future. That was the word July 30 from AMSAT-UK Secretary Jim Heck, G3WGM, during the AMSAT-UK International Space Colloquium in Guildford, England.

Launched September 25, 1993, the satellite operated as a packet store-and-forward BBS (9600 baud FM FSK) on Amateur Radio frequencies for several weeks in early 1994. Over the years, PO-28's primary usage has been commercial, although plans have called for eventually shifting its operation to ham radio use. G3WGM reports that following lengthy negotiations it has been agreed that the satellite can be switched permanently to amateur frequencies. The changeover is expected to take a couple of weeks.

The Portuguese satellite was built at the University of Surrey as part of a collaborative satellite technology program that involved industry and academe. Uplink frequencies will be 145.925 and 145.975 MHz. Downlink frequencies will be 435.250 and 435.275 MHz. More information on PO-28 is on the AMSAT Web site http://www.amsat.org/amsat/sats/n7hpr/po28.html.

Uplink Frequencies: 145.925 and 145.975 MHz
Downlink Frequencies: 435.250 and 435.275 MHz

Orbit: 822 x 800 km, 98.6 deg inclined, sun-synchronous.

Transponder capabilities include FM repeater and 38k4 data. If you want to hear how loud this satellite is, listen on 429.950 until the change back to amateur radio service.

Keplerian elements for PO-28 are not currently contained in the AMSAT keps bulletins, but can be found at Celestrak in amateur.txt using the name "POSAT". Users of Space Track should query the NORAD Satellite ID number 22829. The name listed by Space Track is "EYESAT A".

More information of POSAT-1 can be found at:
http://www.ee.surrey.ac.uk/SSC/CSER/UOSAT/missions/posat1.html
http://www.amsat.org/amsat/sats/n7hpr/po28.html
[ANS-WSR wishes to thanks Trevor, M5AKA and Jim, G3WGM, for this week's information.]

=====
AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German
scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio anand telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at:
http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

THE FOLLOWING SATELLITES ARE NOT IN ORBIT BUT ARE

PROPOSED FOR LAUNCH AT THIS TIME:

UCISAT ?O-??
Catalog number:
Proposed Launch Date: October 31, 2005

Status: Under Construction

Downlink: Submission in Progress
Uplink: Submission in Progress
Callsign: Submission in Progress

This from Matt Bennett, KF6RTB, UCISAT Communications Team Member:

Our website is www.ucisat.net .This is a new website, however, and doesn't have the "Status" section active yet. Because of the growing interest in our project, I'll push our webmaster to create updates (hopefully) on a week-to-week basis. For now, the current status of the mission is as follows:

-Expected Launch Date: October 31st, 2005
-Frequency Allocation: Submission in Progress
-Construction Status: Sub-Assembly
[WSR to thank Matt Bennett, KF6RTB, for this week's report.]
[01302005]
=====
SSETI ?O-??
Catalog Number:
Launch Date: October 27, 2005

Status: ????

The SSETI Express satellite launched at 06:52 UTC on Thursday, 27 October 2005 on board a Kosmos 3M launcher. One hundred and three minutes later, exactly on schedule, the first signals were heard form the groundstation in Aalborg, and two-way communication was established. In addition to several successful communication sessions with SSETI Express, two of the Cubesat passengers, UWE-1 and Xi-V, have been heard by their groundstations.

An official release from ESA stated, "22:20 CEST SSETI Express went into a safe mode due to an undervoltage caused by battery charging problems. The operations team is working actively to resume nominal operations of the satellite and is receiving tremendous help in the process from the amateur radio community. At the time of the anomaly many mission milestones had already successfully
been met."

Graham, UA/G3VZV reports, "that it seems that no reliable reports of any signals have been received and the teams are reviewing all the telemetry already received to fully understand what is happening on board.Initial review suggests that there is a significant chance that the power supply problem may correct itself." Graham also advises that the command station in Aalborg is planning to try to try a blind command of the satellite into S band on mode - maybe on a Sunday am pass at 10:30 UTC.

As the statement above makes clear, ESA and the SSETI Association greatly value the input that amateur operators are providing and would ask amateurs around the world to continue to check for signals on 437.250MHz at the appropriate pass times. These signals may be short bursts of 9k6 data every 18 secs or bursts of pulse telemetry every 30 secs. Please understand that the pulse beacon decoder can produce spurious results on plain noise if over driven!

Anyone hearing anything that matches the above detail is requested to please email details to missioncontrol@sseti.org

The type of the first transmissions will depend on the state of the battery.

In Nominal mode - a sub 1 second burst of AX25 9k6 FSK telemetry every 18 seconds on the downlink frequency of 437.250 MHz.

In Recovery or Safe mode - simple on/off telemetry comprising 16 x 100 msec carrier pulses. This telemetry is repeated every 30 seconds in Safe Mode and every 2 minutes when in Recovery Mode.

The satellite will transmit at a power of 3 watts.

A daily report of the launch campaign is being maintained at http://sseti.gte.tuwien.ac.at/express/mop/index.php?uri=news.html This mission operations site is completely up-to-date regarding Kepler TLEs and other LEOP "Launch and Early Operations Phase" details.

The SERACC software, needed to decode and submit the received data to the SSETI database, together with some audio files containing recorded 9k6 signals to experiment with is also now available

The ESA website about SSETI Express is at:
http://www.esa.int/SPECIALS/sseti_express/SEMARJ7X9DE_0.html

The latest version of the SSETI Express handbook can be downloaded free of charge from the AMSAT-UK website at:
http://www.uk.amsat.org/

[ANS thanks Graham, UA/G3VZV and Trevor, M5AKA for the above]

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:

http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
        888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satelite Report Editor is James K. Darrow, KB9MMC.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:

AMSAT NEWS SERVICE
ANS-310

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating

through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:

ans-editor@amsat.org

In this edition:
* SSETI Express Status
* AMSAT Journal Submissions
* Five Years of Ham Radio on the ISS
* AMSAT Store
* AO-51 New Schedule
* ARISS Status - 31 October 2005
* Suitsat Info available at AMSAT.ORG

SB SAT @ AMSAT $ANS-310.01
SSETI Express Status

AMSAT News Service Bulletin 310.01
From AMSAT HQ SILVER SPRING, MD.
November 6, 2005
To All RADIO AMATEURS
BID: $ANS-310.01

On Thursday, October 27, at 22:20 CEST SSETI Express went into a safe mode due to an undervoltage caused by battery charging problems. The operations team is working actively to resume nominal operations of the satellite and isreceiving tremendous help in the process from the amateur radio community.
At the time of the anomaly many mission milestones had already successfully been met.

Careful analysis of the data received, coupled with ground-based computer simulations and hardware tests, strongly support the proposed theory of a specific component failure in the excess power dissipation system.

Ground-based hardware tests confirm the possibility of a further failure mode of the specific component, which would allow the batteries to charge and the spacecraft to operate once again.

Testing is ongoing to ascertain the specific likelihood of this, and to investigate other possible alternative explanations.

Given that the spacecraft is currently inoperable, the mission cannot continue as planned. It is therefore on indefinite "standby", pending the technical possibility of re-activation of the spacecraft.

The team remain hopeful and vigilant. The primary groundstation and mission control centre are being configured for autonomous monitoring of the spacecraft, such that if it reactivates the team will be immediately alerted and ready to resume the mission.

The educational goals of the mission continue to be met daily as we try to analyse and understand the events since the launch.

Neil Melville - Project Manager

[ANS thanks Neil Melville of the SSETI Project Team for the above information]

SB SAT @ AMSAT $ANS-310.02
AMSAT Journal submission

AMSAT News Service Bulletin 310.02
From AMSAT HQ SILVER SPRING, MD.
November 6, 2005
To All RADIO AMATEURS
BID: $ANS-310.02

Everyone,

Ed Long is appealing for articles for the next AMSAT Journal issue. The Sep/Oct issue has been at the printer for a while now and I'm working on the Nov/Dec issue.

If you have something to contribute, hints and kinks, antenna you have found that actually works, how to build a satellite feed etc. or even an experience on one of the birds please submit it to Ed no later than Monday, November 21. That is slightly less than 3 weeks away. If you have something you would like to contribute, contact Ed and let him know that you're working on something.

Thanks for all your support of the Journal and get busy!!!

[ANS thanks Ed, WA4SWJ for the above information]

SB SAT @ AMSAT $ANS-310.03
Five Years of Ham Radio on the ISS

AMSAT News Service Bulletin 310.03
From AMSAT HQ SILVER SPRING, MD.
November 6, 2005
To All RADIO AMATEURS
BID: $ANS-310.03

==>HAM RADIO HAS ROLE IN FIVE YEARS OF CONTINUOUS ISS HUMAN HABITATION

Five years ago this week, the International Space Station Expedition 1 crew of US astronaut and Expedition 1 Commander William "Shep" Shepherd, KD5GSL, and Russian cosmonauts Yuri Gidzenko and Sergei Krikalev, U5MIR, became the first humans to inhabit the ISS on a long-term basis. Bill McArthur, KC5ACR, who commands Expedition 12, the current ISS crew increment, took note of the occasion when he spoke with reporters this week.

"We've done things that were just inconceivable 50 years ago," McArthur said. "I think that we have demonstrated that human beings can live and work in space, and, given the will, we can return to the moon not just to visit but to stay there permanently and in not-too-distant future, send people to Mars."

Bill Gerstenmaier, NASA's associate administrator for space operations, called the five-year milestone the first leg of a much longer journey "The experiences we're having on station with crews on long-duration missions are teaching us what it will take to send astronauts on longer missions to the moon and into the solar system," he said.

It was on October 31, 2000, that a Russian Soyuz transporter carrying the ISS space pioneers blasted off from Baikonur Cosmodrome in Kazakhstan and docked with the ISS November 2. At the time, Shepherd was only the second US astronaut to go into space aboard a Russian launch vehicle. Krikalev went on to serve as commander of the ISS Expedition 11 crew.

Each of the 12 crews that have lived on the ISS to conduct assembly and research activities has included at least one US radio amateur. McArthur just this week completed the 200th successful Amateur Radio on the International Space Station (ARISS) school group contact. Crews also have gone on the air to participate in such events as ARRL Field Day and scouting's Jamboree On The Air (JOTA) as well as to make casual QSOs. The Expedition 12 crew of McArthur and Russian cosmonaut Valery Tokarev will remain on the ISS until next April.

The initial ARISS gear already was aboard the space station by the time the first crew arrived. The Expedition 1 team installed and activated the VHF gear on FM voice and packet under the US call sign NA1SS and the Russian call sign RS0ISS.

In late 2003, the ARISS program attained another milestone with the installation and checkout of the Phase 2 Amateur Radio gear. A Kenwood TM-D700E transceiver is at the heart of the Phase 2 station, located in the ISS Zvezda Service Module--the crew's living quarters. Crew members now routinely use the Phase 2 station to conduct ARISS school group contacts.
ARISS is looking forward to activation of a Yaesu FT-100 HF/VHF/UHF transceiver and a slow-scan television (SSTV) system in the near future.

NASA has been marking the fifth anniversary of continuous ISS human occupancy with special activities and has set up a special Web site <http://www.nasa.gov/mission_pages/station/main/5_year_anniversary.html>.

The largest and most complex spacecraft ever built, the ISS is the result of a 16-nation partnership led by the US. More ISS information and photos are on NASA's Space Station page.

ARISS is an international educational outreach with US participation by ARRL, AMSAT and NASA.--some information from NASA

[ANS thanks the ARRL Letter Vol. 24 No. 43 for the above information]

SB SAT @ AMSAT $ANS-310.04
AMSAT Store

AMSAT News Service Bulletin 310.04
From AMSAT HQ SILVER SPRING, MD.
November 6, 2005
To All RADIO AMATEURS
BID: $ANS-310.04

The AMSAT store is open for business and is a great place to get AMSAT publications to learn more about a particular mode or satellite. There are items for sale for you to "show the colors" at your local club meeting. A perfect way to ensure your next idea of what satellite is put into orbit is to donate to a particular fund for it. You can even watch the fund grow into a sufficient launch campaign.

[ANS thanks Bruce, KK5DO, AMSAT Store Manager, for the above information]

/EX

SB SAT @ AMSAT $ANS-310.05
AO-51 Schedule

AMSAT News Service Bulletin 310.05
From AMSAT HQ SILVER SPRING, MD.
November 6, 2005
To All RADIO AMATEURS
BID: $ANS-310.05

The new schedule for AO-51 is posted on the AMSAT web site. It has a very interesting mode of ops coming up that you might find interesting - a VHF USB uplink Mode. The versatile satellite is proving that the planning before launch is paying off.

[ANS thanks Kyle Yoksh, K0KN for the above information]

/EX

SB SAT @ AMSAT $ANS-310.06
ARISS Status - 31 October 2005

AMSAT News Service Bulletin 310.06
From AMSAT HQ SILVER SPRING, MD.
November 6, 2005
To All RADIO AMATEURS
BID: $ANS-310.06
ARISS Status
October 31, 2005

1. Tomioka Elementary School Contact Successful

On October 24, Tomioka Elementary School of Urayasu in Urayasu City, Chiba, Japan had a successful contact with Bill McArthur, KC5ACR. Fourteen students asked one question each of the astronaut. Approximately 650 students, parents, teachers and other interested parties were present for the contact, as two television stations and ten newspapers covered the event. Audio and video of the contact are available on ARISS member Satoshi Yasuda's website. See:
http://jk1zrw.dyndns.org/tomioka.html.en

2. Upcoming School Contacts

Kawachi Citizen's Committee for Youth in Miyoshi, Hiroshima, Japan has been approved for a direct contact on Thursday, November 3 at 07:44 UTC.

A contact for Istituto Comprensivo F. Negri in Casale Monferrato, Italy, has been scheduled for a contact on Wednesday, November 9 at 10:28 UTC via the telebridge station WH6PN in Hawaii.

Furtherwick Park School in Canvey Island, Essex, United Kingdom, has been approved for an ARISS contact. It is scheduled for Wednesday, November 9, 2005 at 17:45 UTC, and will be direct via GB2FPS.

3. ARRL Article on Tomioka Contact

ARRL covered the Tomioka Elementary School contact in the article, "New ISS Commander Delights Japanese Youngsters via Ham Radio." See:
http://www.arrl.org/news/stories/2005/10/27/4/?nc=1

4. Astronaut Training

Astronauts Nicole Stott and Garrett Reisman wrapped up their amateur radio license training sessions on Wednesday, October 26.

5. Expedition 11 Crew Debrief

The U.S. debrief session with Expedition 11 crew member John Phillips, KE5DRY, is tentatively scheduled for Tuesday, November 8 at 4:00 pm ET.

6. NASA Night Article

Pine Ridge Middle School, located in Naples, Florida, held a "NASA Night" on September 27 to educate parents, teachers and students about NASA programs. The Southgate Amateur Radio Club set up an amateur radio station at the school so that children could speak with and ask questions of NASA employees. An article covering the event has been posted to the club's website. See:
http://www.southgatearc.org/news/october2005/nasa_night.htm

7. SuitSat Status

Progress 19P was launched on September 8, carrying the SuitSat hardware. The Russian EVA to deploy SuitSat has been tentatively scheduled for December 8, 2005.

[ANS thanks Carol, KB3LKI for the above information]

SB SAT @ AMSAT $ANS-310.07
SuitSat Info Available on AMSAT.ORG Web

AMSAT News Service Bulletin 310.07
From AMSAT HQ SILVER SPRING, MD.
November 6, 2005
To All RADIO AMATEURS
BID: $ANS-310.07

Now is the time to begin preparing your amateur radio station to receive signals from SuitSat, the most unusual Amateur Radio satellite ever orbited. SuitSat amateur radio equipment will be installed inside a surplus Russian Orlan spacesuit. It will become an independently orbiting satellite once it is deployed by the crew of the International Space Station during an extravehicular activity, tentatively planned around December 8, 2005.

Interested amateur radio operators are invited to read the whole story on the web on AMSAT's front page, http://www.amsat.org. Follow the links to see the photos and video of this exciting new opportunity for amateur radio in space.

[ANS thanks the ARISS and SuitSat project teams for the above information]

/EX

In addition to regular membership, AMSAT offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT Office.

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating
          procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that SO-50
has shifted downlink frequency as much as 5khz up. This both from
Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm
   the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT
   the repeater on and off within the 10 Minute window.

```
3) Sending the 74.4 tone again within the 10 minute window
   will reset the 10 minute timer.
[09122004]
=====
FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink:     145.90 to 146.00 MHz CW/LSB
Downlink:   435.80 to 435.90 MHz CW/USB
Beacon:     435.795 MHz

Digital Mode JD
Uplink:     145.850 145.870 145.910 MHz FM
Downlink:   435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign:   8J1JCS
Digitalker: 435.910 MHz

John, N4QWL reports on July 16th, 2005:

Last evening I had a AOS to LOS qso with WI2W. FO-29 came up at 01:17z
here in FM07 and I found WI2W and we chatted until 01:33z. The satellite
was
at 2 degrees elevation when I finally heard him start to crackle a bit.
What
a great QSO! To think that I watched this bird launch back in 1996 and
it
is still working so well is a real thrill. I believe I still have the
video. I might just look for it and watch it again. Boy do I love this
satellite stuff! Look for you all up there.

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that
will automatically analyze all digital telemetry from the satellite
(such as
current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[ANS-WSR wishes to thanks John, N4QWL for this week's report]

=====

AO-7 AMSAT OSCAR 7
Catalog number: 07530
Launch Date: November 15, 1974

Status: Semi-operational in sunlight.
Return to active status: June 21,2002

Uplink:	145.850 to 145.950 MHz CW/USB Mode A
	432.125 to 432.175 MHz CW/LSB Mode B
Downlink:	29.400 to 29.500 MHz CW/USB Mode A
	145.975 to 145.925 MHz CW/USB Mode B
Beacon:	29.502 MHz, 145.972 MHz, 435.1 MHz, 2304.1 MHz

Emily, W0EEC has created a website to allow the users of AO-7 to record
contacts, observations and use of the satellite more effectively at:
http://www.emilyshouse.com/experthams/ao7/main.php
This includes the ability to log contacts.

Tim, K3TZ has written a program to decode AO-07 telemetry.
The program can be downloaded at:
http://www.qsl.net/k3tz/files/K3TZ_AO-07_Telemetry_Decoder_0.5.zip

For more AO-7 info:
http://www.amsat.org/amsat/sats/n7hpr/ao7.html

INTERNATIONAL SPACE STATION (ISS) - ARISS
Catalog number: 25544
Launch date: November 20, 1998

Status: Operational
Current Mode: U/V CROSS-BAND REPEATER
Digipeater: Inactive

The current Expedition 12 crew is:
Commander: William McArthur - KC5ACR
Flight Engineer: Valery Tokarev - (no call)

Worldwide packet uplink:	145.990 MHz FM
Region 1 voice uplink:	145.200 MHz FM
Region 2/3 voice uplink:	144.490 MHz FM

Worldwide downlink: 145.800 MHz FM

Repeater Uplink: 437.800 MHz FM
Repeater Downlink: 145.800 MHz FM
Doppler Shift is 10 KHz

Russian callsigns: RS0ISS, RZ3DZR
USA callsign: NA1SS
Packet station mailbox callsign: RS0ISS-11
Packet station keyboard callsign: RS0ISS-3
Digipeater callsign: ARISS

The ISS daily crew schedule can be found at:

SB SAT @ AMSAT <W8ISS $ANS-310.S2
WSR 310 Part 2 11/06/2005

AMSAT NEWS SERVICE BULLETIN 310.S2 FROM AMSAT HQ
SILVER SPRING, MD, November 06, 2005
TO ALL RADIO AMATEURS
BID: $ANS-310.S2

PCSAT2 ?0-??
Catalog Number:
Launch Date: August 1, 2005

Status: Operational

PCSAT2 was installed on the exterior of the International Space Station and was activated on August 3, 2005.

PCSAT2 CAPABILITIES: PCSAT2 is attached to the ISS and so its operations must be in cooperation with the ARISS communications suite to minimize any mutual interference and to coordinate activities. Here are the capabilities of the PCSAT2 and ARISS payloads:

PCSAT SYSTEM A:

435.275 PCSAT2 DOWNLINK 1200 baud packet with uplink on 145.825
435.275 PCSAT2 DOWNLINK Occasional user PSK-31 continuous downlink
145.825 PCSAT2 DOWNLINK 1200 baud packet

PCSAT SYSTEM B:

437.975 PCSAT2 DOWNLINK periodic Solar Cell data and PCSAT2 telemetry at 9600 baud
437.975 PCSAT2 DOWNLINK TNC-B command downlink at 1200 baud
437.975 PCSAT2 DOWNLINK User Voice Repeater with VHF uplink
437.975 PCSAT2 DOWNLINK Packet digipeater with VHF uplink

It looks like PCSAT2 can best contribute at this time by operating in PSK-31 mode for the near future. This is a very exciting new transponder mode which solves the congestion problem on FM repeaters by letting multiple stations all communicate at the same time.

PSK-31 users are welcome to try out the new PCSAT2 PSK-31 transponder on ISS with an uplink on 29.402 +/- 1 KHz and downlink on 435.275 +/- Doppler using FM.

The FM downlink lets everyone operate full duplex and everyone to see the same view of the passband as everyone else. THus you can see exactly
what your signal looks like to everyone else.

Help Wanted:

Here is your chance to become a viable part of the Amateur Satellite Community.

We are looking for a volunteer satellite packet
station in Hawaii that is interested in helping with
telemetry and sat-gating of PCSAT2 and
ARISS packets. Requirements are:

1) General familiarity with packet
2) TNC connected to a cross band radio that
     can RX on UHF and TX on VHF.
3) modest UHF beam and rotator system.

Contact WB4APR for more information.

Packets seen from PCSAT2 can be reviewed at:
http://www.findu.com/cgi-bin/pcsat2.cgi

A screen shot of both the 9600 bps and 1200 bps decoded data
as seen by Simon, 9W2QC, can be seen at:
http://www.9w2qc.net/pcsat2/

More information on PCSAT2 can be found at:
http://web.usna.navy.mil/~bruninga/pcsat2.html

[ANS-WSR thanks Bob, WB4APR and the U.S. Naval Academy Satellite Lab for
the aboveinformation.]

=====
NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Non-Operational?????

Uplink/downlink: 145.827 MHz 1200 baud AX.25 AFSK via W3ADO-1
Aux/Uplink: 435.250 MHz 9600 baud via PCSAT-2 (off)
APRS Downlink: 144.390 MHz (Region 2)

PCSat is a 1200-baud APRS digipeater designed for use by stations using
hand-held or mobile transceivers. Downlinks feed a central web site at:
http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval
Academy under the guidance of Bob Bruninga, WB4APR.
[07242005]
=====
CUTE-1
Catalog number: 27844
Launched: June 30,2003

Status: Operational

Uplink: ?
Downlink: 436.8375 CW
              437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ?)
Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as
OPERATIONAL?

Indeed it is very operational as a CUBESAT sending CW telemetry on 436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:

```
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6
```

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at 14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz. Initial orbital parameters were period 101.4 min, apogee 831 km, perigee 819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

[ANS WSR wishes to thank Cliff, K7RR, for this week's information]
[07242005]

=====

MO-46 TIUNGSAT-1
Catalog number: 26548
Launched: September 26, 2000

Status: Operational

Uplink: 145.850 or 145.925 MHz 9600-baud FSK
Downlink: 437.325 MHz
Broadcast callsign: MYSAT3-11
BBS: MYSAT3-12

TiungSat-1 is Malaysia's first micro-satellite and in addition to commercial land and weather imaging payloads offers FM and FSK

Amateur Radio communication.

TiungSat-1, named after the mynah bird of Malaysia, was developed as a collaborative effort between the Malaysian government and Surrey Satellite Technology Ltd.
[05152005]
=====
AO-16 PACSAT
Catalog number: 20439
Launch Date: January 22, 1990

Status: Semi-operational, the digipeater command is on and open for APRS users.

```
Uplink:             145.90 145.92 145.94 145.96 MHz FM
                     (using 1200-baud Manchester FSK)
Downlink:           437.026 MHz SSB (1200-baud PSK)
Mode-S Beacon:      2401.1428 MHz
Broadcast Callsign: PACSAT-11
BBS:                PACSAT-12
```

A WOD collection of current graphics along with general information and telemetry samples can be found at:
http://www.telecable.es/personales/ea1bcu
[05092004]
=====
UO-11 OSCAR-11
Catalog number: 14781
Launched: March 1, 1984

Status: Semi-operational?

```
Telemetry Downlink: 145.826 MHz. FM (1200-baud AFSK).
                    approx. 10 days ON, 10 days OFF
Mode-S Beacon:      2401.500 MHz. ... OFF
UHFBeacon:          435.025 MHz. ...  OFF
```

During the period 24 September to 25 October 2005 the VHF beacon on 145.826MHz resumed transmissions, as expected, on 30 September, sometime between 06:05 and 06:42 UTC passes. Reasonable signals were also captured on the 17:44 pass, later that day. However by the 16:49 UTC pass on 02 October, the beacon had switched OFF. Transmissions resumed on 21 October, and should continue until around 31 October.

The on-board clock continues to show a very large error. Currently it is 19.2394 days slow, having lost six hours while the beacon was last OFF, ie. between 02 October and 21 October. When the beacon is ON, the clock is stable to within a few seconds.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working.

The eclipses have now ended, and the satellite should be in continuous sunlight for the remainder of this year, and well into next year. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures.

The watchdog timer appears to be operating on the 20 day cycle, ie. approximately ten days ON followed by 10 days OFF. It appears to be uneffected by problems of the on-board clock. However, poor solar attitude, and battery problems, may be combining to produce a low line voltage. This causes the beacon to switch OFF premeaturely, and resets the watchdog timer cycle.

The Beacon frequencies are -
VHF 145.826 MHz. AFSK FM ASCII Telemetry
UHF 435.025 MHz. OFF
S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is
www.users.zetnet.co.uk/clivew/

If you place this bulletin on a terrestrial packet network, please use the bulletin identifier $BID:U2RPT114.CWV, to prevent duplication.

[ANS thanks Clive G3CWV for the above information]

SB SAT @ AMSAT <W8ISS $ANS-310.S3
WSR 310 Part 3 11/06/2005

AMSAT NEWS SERVICE BULLETIN 310.S3 FROM AMSAT HQ
SILVER SPRING, MD, NOVENBER 06, 2005
TO ALL RADIO AMATEURS
BID: $ANS-310.S3

THE FOLLOWING ARE IN ORBIT BUT ARE
NON-OPERATIONAL AT THIS TIME:

POSAT-1 PO-28
Catalog Number: 22829
Launched : September 25, 1993

Status: Operational - Not open for Amatuer use

Downlink: 435.250 MHz
435.275 MHz

Uplink: 145.925 MHz
145.975 MHz

Broadcast callsign: POSAT1-11
BBS callsign: POSAT1-12

PO-28 (POSAT-1), Portugal's first satellite, launched 12 years ago,will be turned over to Amateur Radio use in the very near future. That was the word July 30 from AMSAT-UK Secretary Jim Heck, G3WGM, during the AMSAT-UK International Space Colloquium in Guildford, England.

Launched September 25, 1993, the satellite operated as a packet store-and-forward BBS (9600 baud FM FSK) on Amateur Radio frequencies for several weeks in early 1994. Over the years, PO-28's primary usage has been commercial, although plans have called for eventually shifting its operation to ham radio use. G3WGM reports that following lengthy negotiations it has been agreed that the satellite can be switched permanently to amateur frequencies. The changeover is expected to take a couple of weeks.

The Portuguese satellite was built at the University of Surrey as part of a collaborative satellite technology program that involved industry and academe. Uplink frequencies will be 145.925 and 145.975 MHz. Downlink frequencies will be 435.250 and 435.275 MHz. More information on PO-28 is on the AMSAT Web site

http://www.amsat.org/amsat/sats/n7hpr/po28.html.

Uplink Frequencies: 145.925 and 145.975 MHz
Downlink Frequencies: 435.250 and 435.275 MHz

Orbit: 822 x 800 km, 98.6 deg inclined, sun-synchronous.

Transponder capabilities include FM repeater and 38k4 data. If you want to hear how loud this satellite is, listen on 429.950 until the change back to amateur radio service.

Keplerian elements for PO-28 are currently contained in the AMSAT keps bulletins and at Celestrak in amateur.txt using the name "POSAT". Users of Space Track should query the NORAD Satellite ID number 22829. The name listed by Space Track is "EYESAT A".

More information of POSAT-1 can be found at:
http://www.ee.surrey.ac.uk/SSC/CSER/UOSAT/missions/posat1.html
http://www.amsat.org/amsat/sats/n7hpr/po28.html
[ANS wishes to thank Duane Naugle, KO6BT, for this week's update.]

=====
AO-10 OSCAR 10
Catalog number: 14129
Launched: June 16, 1983

Status: Non-operational

Uplink: 435.030 to 435.180 MHz CW/LSB
Downlink: 145.975 to 145.825 MHz CW/USB
Beacon: 145.810 MHz (unmodulated carrier)

AO-10 has been locked into a Mode-B, 70-cm uplink and
2-meter downlink for several years.

W4SM has more information about the satellite at the following URL:
http://www.cstone.net/~w4sm/AO-10.html
[05092004]
=====
IO-26 ITAMSAT
Catalog number: 22826
Launch Date: September 26, 1993

Status: Non-operational

Uplink: 145.875 145.900 145.925 145.950 MHz FM (1200-baud)
Downlink: 435.812 MHz SSB
Broadcast Callsign: ITMSAT-11
BBS: ITMSAT-12

Alberto E. Zagni - I2KBD reports on 02/13/05
The spacecraft is in MBL (safe mode) and is trasmitting just 6 channels
of telemetry. Temperatures and voltage are nominal, but there seems to
be a problem with the onboard receiver, refusing to accept commands.
The spacecraft was launched in 1993, thus nearing 12 years in orbit...

Best regards
Alberto E. Zagni - I2KBD
ITAMSAT Mission Director

=====
PO-34 PANSAT
Catalog number: 25520
Launched: October 30, 1998

Status: Telemetry downloads only

Uplink/downlink frequency (listed on the PanSat web site) 436.500 MHz

The satellite is not available for general uplink transmissions.

The Naval Postgraduate School developed PanSat. At the time of launch, PanSat spread-spectrum digital transponders were to be available to Amateur Radio operators along with software to utilize this technology.

The satellite is still operating, however, the spread spectrum packet radio portion never took place. The spacecraft is now beyond it's initial 2-year mission life, but telemetry records are still being downloaded.

For more information, visit the official PanSat web site at:
http://www.sp.nps.navy.mil/pansat/
[05092004]
=====
SO-33 SEDSAT-1
Catalog number: 25509
Launched: October 24, 1998

Status: Semi-operational

```
Downlink: 437.910 MHz FM (9600-baud FSK)

The satellite is not currently available for uplink transmissions and
the image and transponder recovery efforts have been unsuccessful.

For more information on SedSat-1 visit the satellite web site:
http://seds.uah.edu/projects/sedsat/sedsat.htm

[ANS has no further information]

=====
AO-49 AATiS OSCAR-49 (SAFIR-M)
```

Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio anand telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at: http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

AMSAT NEWS SERVICE BULLETIN 310.S4 FROM AMSAT HQ
SILVER SPRING, MD, NOVEMBER 06,2005
TO ALL RADIO AMATEURS
BID: $ANS-310.S4

THE FOLLOWING SATELLITES ARE NOT IN ORBIT BUT ARE
PROPOSED FOR LAUNCH AT THIS TIME:

UCISAT ?O-??

Catalog number:
Proposed Launch Date: October 31, 2005

Status: Under Construction

Downlink: Submission in Progress
Uplink: Submission in Progress
Callsign: Submission in Progress

This from Matt Bennett, KF6RTB, UCISAT Communications Team Member:

Our website is www.ucisat.net .This is a new website, however, and doesn't have the "Status" section active yet. Because of the growing interest in our project, I'll push our webmaster to create updates (hopefully) on a week-to-week basis. For now, the current status of the mission is as follows:

-Expected Launch Date: October 31st, 2005
-Frequency Allocation: Submission in Progress
-Construction Status: Sub-Assembly
[WSR to thank Matt Bennett, KF6RTB, for this week's report.]
[01302005]

=====

SSETI ?O-??
Catalog Number:
Launch Date: October 27, 2005

Status: ????

The SSETI Express satellite launched at 06:52 UTC on Thursday, 27 October 2005 on board a Kosmos 3M launcher. One hundred and three minutes later, exactly on schedule, the first signals were heard form the groundstation in Aalborg, and two-way communication was established. In addition to several successful communication sessions with SSETI Express, two of the Cubesat passengers, UWE-1 and Xi-V, have been heard by their groundstations.

An official release from ESA stated, "22:20 CEST SSETI Express went into a safe mode due to an undervoltage caused by battery charging problems. The operations team is working actively to resume nominal operations of the satellite and is receiving tremendous help in the process from the amateur radio community. At the time of the anomaly many mission milestones had already successfully
been met."

Graham, UA/G3VZV reports, "that it seems that no reliable reports of any signals have been received and the teams are reviewing all the telemetry already received to fully understand what is happening on board.Initial review suggests that there is a significant chance that the power supply problem may correct itself." Graham also advises that the command station in Aalborg is planning to try to try a blind command of the satellite into S band on mode - maybe on a Sunday am pass at 10:30 UTC.

As the statement above makes clear, ESA and the SSETI Association greatly value the input that amateur operators are providing and would ask amateurs around the world to continue to check for signals on 437.250MHz at the appropriate pass times. These signals may be short bursts of 9k6 data every 18 secs or bursts of pulse telemetry every 30 secs. Please understand that the pulse beacon decoder can produce spurious results on plain noise if over driven!

Anyone hearing anything that matches the above detail is requested to please email details to missioncontrol@sseti.org

The type of the first transmissions will depend on the state of the battery.

In Nominal mode - a sub 1 second burst of AX25 9k6 FSK telemetry every 18 seconds on the downlink frequency of 437.250 MHz.

In Recovery or Safe mode - simple on/off telemetry comprising 16 x 100 msec carrier pulses. This telemetry is repeated every 30 seconds in Safe Mode and every 2 minutes when in Recovery Mode.

The satellite will transmit at a power of 3 watts.

A daily report of the launch campaign is being maintained at http://sseti.gte.tuwien.ac.at/express/mop/index.php?uri=news.html This mission operations site is completely up-to-date regarding Kepler TLEs and other LEOP "Launch and Early Operations Phase" details.

The SERACC software, needed to decode and submit the received data to the SSETI database, together with some audio files containing recorded 9k6 signals to experiment with is also now available

The ESA website about SSETI Express is at:
http://www.esa.int/SPECIALS/sseti_express/SEMARJ7X9DE_0.html

The latest version of the SSETI Express handbook can be downloaded free of charge from the AMSAT-UK website at:
http://www.uk.amsat.org/

[ANS thanks Graham, UA/G3VZV and Trevor, M5AKA for the above]

SUITSAT ?O-??
Catalog Number:
Proposed Release Date: Mid-December 2005

Proposed Callsign: TBA
Proposed Transmit Frequency: TBA

This from Miles, WF1F:
At the present time there are tentative plans to have a Space Walk (EVA) taking place from ISS sometime around December 8, 2005. It is possible that during this Space Walk, the ISS crew may Hand launch the ARISS SuitSat project during that EVA mission. Again, all date are subject to last minute changes.
Please Keep monitoring the ARISS and AMSAT web pages for more updates.

The SuitSat project is a free floating Unmanned satellite that will be running on Batteries Only! The life span of the project will be limited to the power in the batteries. SuitSat may last as little as 1 week or as long as 6 weeks.
So it is very important for you to get your satellite monitoring station ready now. You should not wait for the Official activation date, because you

may
miss the opportunity to hear the new bird.

I will keep posting updated links for the SuitSat project as they become available.

A video of the progress of Suitsat can be found at the following URL:
http://www.amsat.org/amsat-new/information/videoNews.php

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
        888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satelite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the

memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen,
G0FCL and John Branegan GM4IHJ.

Membership of the Royal Naval Amateur Radio Society (RNARS) is open to all
who have an
interest in any facet of amateur radio and who are serving or who have
served in the following:

Royal Navy
Royal Marines
Royal Naval Reserve
Royal Marine Reserve
Women's Royal Naval Service
Royal Naval Auxiliary Service
Royal Fleet Auxiliary
Merchant Navy
Sea Cadets Corps
Nautical Training Corps
MOD (Navy)
Commonwealth and Foreign Navies

NON-MEMBERS can purchase RNARS commodities.

Details and membership application form is available online at
http://www.rnars.org.uk

NIKOLA TESLA is a subject quite popular with many people. There is much speculation as to the source of his knowledge and vision. Some even ask if he could have been an alien!

SESH HERI is the author of a new novel featuring historical events from Tesla's life, and how these events could have led to an adventure on Mars. Certainly, this is material of interest to your listeners fascinated by the great scientist and the mysterious Red Planet.

Heri has incorporated his studies on Tesla and a personal fascination with the Mars theories of RICHARD HOAGLAND into an historical 'What if?' novel based on much actual research conducted on these subjects. Heri can discuss the great scientific genius and Martian enigmas with the best of them.

Sesh Heri has studied geomorphology for over 20 years and has developed a revolutionary theory that harmoniously confirms and clarifies the tetrahedral geometry theories of RICHARD HOAGLAND -- whom HERI greatly respects.

Heri's conclusion is that the Earth's present geographical axis was artificially induced -- in recent geological time -- with extreme precision. Heri concludes that the shape of the Earth reveals many things, among them is evidence of pole shift. Heri also concludes that the original orientation of the Earth put Giza at 19.5 degrees latitude.

Many people have said for years that Tesla's life and works would make a great science fiction novel. Well, Heri's novel WONDER OF THE WORLDS is that novel. In fact -- it is the essential NIKOLA TESLA novel. Heri's revolutionary theory of geomorphology is interwoven through WONDER OF THE WORLDS.

Heri is prepared to present and discuss his theory, especially how it relates to and supports the theories of RICHARD HOAGLAND -- whom HERI would welcome a dialogue with on these subjects.

The novel WONDER OF THE WORLDS, in which Heri has incorporated his revolutionary theory on geomorphology, features Tesla being guided by a secret society that allows him access to a mysterious book containing secret truths -- truths that eventually lead the great Tesla to Mars.

Jim McCanney, in an excerpt relating to his book ATLANTIS TO TESLA on his website, comments that Tesla was very possibly guided by such a secret society-- a secret society that may have had intimate knowledge of the much discussed Kolbrin Bible.

As you are beginning to see, WONDER OF THE WORLDS is more than just another novel exploiting fascinating mysteries. WONDER OF THE WORLDS incorporates interesting and enigmatic anomalies and questions of our world and history -- and serves as an introduction to theories and evidences of the most impactful mysteries of our times.

SESH HERI is more than a novelist. Twain and Tesla did, indeed, meet. The technology of WONDER OF THE WORLDS existed either in the labs of TESLA or in his designs. SESH HERI has spent half a lifetime researching and studying the principles and ideas he has merely touched upon in his masterful adventure tale -- principles and ideas he is prepared to discuss in detail.

And yet, I find much resistance when promoting this book. Therefore, I am reaching out to the people in a grass roots campaign to spread the word.

If there is anyone interested, please check out the following links:

AMSAT NEWS SERVICE
ANS-317

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:

ans-editor@amsat.org

In this edition:

* SuitSat Possible Activation December 2005
* SSETI Express Designated XO-53
* ARISS Status November 7, 2005
* PCSAT2 Amateur Radio Military Appreciation Day
* AMSAT Volunteer In-Kind Reporting System

SB SAT @ AMSAT $ANS-317.01
SuitSat Possible Activation December 2005

AMSAT News Service Bulletin 317.01
From AMSAT HQ SILVER SPRING, MD.
November 13, 2005
To All RADIO AMATEURS
BID: $ANS-317.01

A note to readers of ANS. Since the SuitSat project encompasses both a free floating unmanned satellite and is being hand launched from a Manned satellite, there will be some double postings regarding the SuitSat project on both the SAREX and AMSAT-BB mailing lists.

If you are not currently on the SAREX list, you may want to check the AMSAT

link to sign up for both so you do not miss the additional projects coming this year, and early 2006.
http://www.amsat.org/amsat-new/tools/maillist/maillist.php

SuitSat, Slow Scan TV from ISS in 5 weeks?

Slow Scan TV from the SuitSat project, launched from the International Space Station, may be activated in as little as 5 weeks. Note: All dates are subject to change.

At the present time there are tentative plans to have a Space Walk (EVA) taking place from ISS sometime around December 8, 2005. It is possible that during this Space Walk, the ISS crew may "Hand" launch the ARISS SuitSat project during that EVA mission. Again, all date are subject to last minute changes. Please Keep monitoring the ARISS and AMSAT web pages for more updates.

The SuitSat project is a free floating Unmanned satellite that will be running on Batteries Only! The life span of the project will be limited to the power in the batteries. SuitSat may last as little as 1 week or as long as 6 weeks. So it is very important for you to get your satellite monitoring station ready now. You should not wait for the Official activation date, because you may miss the opportunity to hear the new bird.

I will keep posting updated links for the SuitSat project as they become available.

SuitSat Specific links:

AMSAT front page:
http://www.amsat.org

SuitSat Article:
http://www.amsat.org/amsat-new/articles/SuitSat/

AMSAT Video News:
http://www.amsat.org/amsat-new/information/videoNews.php
(and watch the SuitSat video)

Frank Bauer's, KA3HDO, article "This Is SuitSat-1 RS0RS":
http://www.amsat.org/amsat-new/articles/BauerSuitsat/index.php

"SuitSat," New ARISS SSTV Gear Arrives at International Space Station. See:
http://www.arrl.org/news/stories/2005/09/16/2/?nc=1

SSTV details:
The SuitSat project will transmit, Telemetry, Pre-Recorded Voice messages and one SSTV image. The whole process will repeat approximately every 9 minutes. (Robot 36 format).

All transmissions will be in FM mode and will be on the 2-meter amateur radio satellite band. The current frequency for SuitSat is 145.990 FM Downlink only (There is no uplink for this satellite). This means that the

Doppler frequency drift will not be much of a problem and you will be able to use your existing 2-meter station or a police scanner to hear and decode the signals SuitSat.

If you have already have been successful in working the Packet station or talked to the ISS crew on 2-meter voice, than you already have most of what you need. What's left is to connect your computer to the speaker of your radio and some SSTV decoding software, such as ChromaPix or similar software. See:
http://www.barberdsp.com/

So have fun, find your best setup and start practicing how to decode SSTV on 2-meters.

Slow Scan TV Decoding Software:
Here are just two of the many Share-Ware SSTV applications on the market. There may be many more.

W95SSTV by Silicon Pixels
http://www.barberdsp.com/w95sstv/w95dload.htm

MMSSTV
http://mmhamsoft.ham-radio.ch/

There are also many High quality pay software applications that offer many more features, such as multiple windows that allow your to simultaneously receive an image while preparing your next image that you want to transmit.

CPIX
http://www.barberdsp.com/

What is Slow Scan TV:
On this web page you will find many links to help you learn more about Slow Scan TV:
http://www.marexmg.org/fileshtml/sstvlinkpage.html

Tips on how to use ISS, SSTV, Packet and Voice:
http://www.marexmg.org/fileshtml/howtouseiss.html

Location of Hardware on ISS:
This link will show you images of some of the amateur radio hardware already installed on ISS:

SB SAT @ AMSAT $ANS-317.02
SSETI Express Designated XO-53

AMSAT News Service Bulletin 317.02
From AMSAT HQ SILVER SPRING, MD.
November 13, 2005
To All RADIO AMATEURS
BID: $ANS-317.02

The SSETI Express Team has met the requirements to earn their satellite the official designator of Express Oscar 53, or XO-53.

Bill Tynan, Past AMSAT President, and presently OSCAR number coordinator, wrote to the SSETI Team, "From the information you have sent to the AMSAT-NA Board and officials regarding this project, it has been determined that the SSETI Express
spacecraft IS qualified to receive an OSCAR number."

Bill continues, "Therefore, by the authority vested in me by the AMSAT-NA President, I am pleased to issue this new amateur satellite the designation Express OSCAR - 53, or XO-53 as you requested. "Congratulations to all involved in the successful completion and launch of XO-53".

For information about the requirements that must be satisfied in order to obtain an OSCAR designation refer to:
http://www.amsat.org/amsat-new/information/faqs/numbers.php

[ANS thanks Bill, W3XO for the above information]

/EX

SB SAT @ AMSAT $ANS-317.03
ARISS Status November 7, 2005

AMSAT News Service Bulletin 317.03
From AMSAT HQ SILVER SPRING, MD.
November 13, 2005
To All RADIO AMATEURS
BID: $ANS-317.03

1. Kawachi School Contact Successful

On November 3, students from the Kawachi Citizen's Committee for Youth in Miyoshi, Hiroshima, Japan experienced a successful contact with astronaut Bill McArthur, KC5ACR. Nineteen children each posed a question to Bill during the Q & A session, as an audience of approximately 110 students, parents and others gathered for the event. Media coverage included 5 television stations and 3 newspapers. The audio and video of the contact are available on the following website:
http://jk1zrw.dyndns.org/kawachi.html.en

2. Upcoming School Contacts

Hermann Middle School in Hermann, Missouri has been scheduled for a contact on Wednesday, November 16 at 18:58 UTC.

3. Astronaut Training Status

Astronaut Nicole Stott took and passed her amateur radio exam on Friday, October 28, and was issued the callsign, KE5GJN. Stott is currently in the future ISS crew selection pool.

The last 6 unlicensed astronaut candidates from the class of 2004 were tentatively scheduled for an amateur radio license training session on November 10.

4. Expedition 11 Crew Debrief

The U.S. debrief session with Expedition 11 crew member John Phillips, KE5DRY, is tentatively scheduled for Tuesday, November 15 at 4:00 pm ET. (Note the change in date.)

5. ARRL Article on ISS Anniversary

On November 1, ARRL posted a web story covering the fifth anniversary of the ISS and amateur radio. "Ham radio has role in five years of continuous ISS human habitation," may be found at:
http://www.arrl.org/

6. ARISS International Teleconference Held

The monthly ARISS International teleconference was held on Tuesday, October 25. Among the agenda items discussed were the Columbus Module antennas and SuitSat status. The next international meeting will be held on November 15.

7. Astronaut Active on Voice

Astronaut Bill McArthur has been engaging children in his school contacts, but he also has hams around the world smiling as he makes voice contacts with the general public. McArthur was active over Australia on Friday, October 28, and again over Europe on November 3, making contacts with stations in the U.K. and Italy.

8. ARISS Mini-TIM Planned

The ARISS team may hold a Technical Interchange Meeting (TIM) in the Goddard Space Flight Center area in early January 2006. Agenda items are being compiled as team members begin to p lanfortheconference.

9. ARISS International Face-to-Face Meeting

The minutes and presentations from the ARISS International Face-to-Face Meeting held in the U.K. in August 2005 have been posted to the AMSAT website. See:
http://www.amsat.org/amsat/ariss/Meetings/2005_Surrey/2005_Surrey_ARISS-I_Minutes.pdf

[ANS thanks Carol, KB3LKI for the above information]

SB SAT @ AMSAT $ANS-317.04
PCSAT2 Amateur Radio Military Appreciation Day

AMSAT News Service Bulletin 317.04
From AMSAT HQ SILVER SPRING, MD.
November 13, 2005
To All RADIO AMATEURS
BID: $ANS-317.04

On all USA passes on 14 Nov, PCSAT2 (on ISS) will be operating with a one-way NET Control voice downlink to acknowledge packet checkins from any packet hams on 145.825 uplink as part of Amateur Radio Military Appreciation Day.

During these passes over the USA only, the normal ARISS digipeater may be disabled. Users desiring to participate simply transmit their packet as usual on the 145.825 PCSAT2 uplink using the path VIA ARISS and listen for voice downlink acknowledgment on 437.975 +/- Doppler. Their packet should also be digipeated on 435.275 downlink.

These details are posted on the PCSAT2 web page:
http://www.ew.usna.edu/~bruninga/pcsat2.html

[ANS thanks Bob, WB4APR for the above information]

/EX

SB SAT @ AMSAT $ANS-317.05
AMSAT Volunteer In-Kind Reporting System

AMSAT News Service Bulletin 317.05
From AMSAT HQ SILVER SPRING, MD.
November 13, 2005
To All RADIO AMATEURS
BID: $ANS-317.05

Attention all AMSAT members who volunteer time for AMSAT projects:

Just a reminder that we wish to keep track of all your efforts on behalf of AMSAT projects.. Please keep track of your hours and report them to AMSAT via the VRS (Volunteer Reporting System) on amsat.org. We are nearing year end and are well behind last years numbers.

If you are new to the VRS system, it works like this:

Go to amsat.org
Select: "Become a Volunteer" from the panels on the left side of the Home Page.
Select #2: "Read "About the Volunteer Reporting System" and create a VRS account". This will give you full details.

To become a user: Send an e-mail to in-kind@amsat.org. Include the USER NAME you wish to use when reporting hours to the AMSAT database. (CASE SENSITIVE)

We will confirm receipt of your request and then you will be ready to participate. Upon opening an account: Report hours as often as you wish. Remember, your filings are confidential. We will only publish grand totals with no names or hourly rates made public.

Thank you for your support of this important AMSAT system.

[ANS thanks Gunther, W8GSM for the above information]

/EX

In addition to regular membership, AMSAT offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT Office.

73,
This week's ANS Editor,
Al Marote, WA1LBG

This report is organized into 4 parts.
Part 1 - operational analog amateur satellites.
Part 2 - operational digital amateur satellites.
Part 3 - non - operational satellites
Part 4 - proposed satellites

SB SAT @ AMSAT <W8ISS $ANS-317.S1
WSR 317 Part 1 11/13/2005

AMSAT NEWS SERVICE BULLETIN 317.S1 FROM AMSAT HQ
SILVER SPRING, MD, November 13, 2005
TO ALL RADIO AMATEURS
BID: $ANS-317.S1

VO-52 HAMSAT
Catalog Number: 28650
Launch Date: May 05,2005

Status: Testing
Current Mode: U/V

Proposed frequencies:

Indian transponder:
Uplink : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacom : 145.940MHz continue carier signal

Dutch transponder:
Uplink : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacon : 145.860MHz 12WPM with CW message
[07242005]
=====
AO-51 ECHO
Catalog number: 28375
Launch date: June 29, 2004

Status: Testing
Curent Mode: PBBS - ON
      FM REPEATER - V/S

Analog voice downlink: 435.300 MHz FM
              435.150 MHz FM
Analog voice uplink: 145.880 MHZ FM
              145.920 MHz FM 67Hz PL tone
                       1268.700 MHz FM 67Hz PL tone

Digital Downlinks: 435.150 MHz FM, 38k4 Digital, PBP, 1 watt output
                       2401.200 MHz FM 38k4 bps, AX.25
Digital Uplink: 145.860 MHz FM, 9k6 Digital, Pacsat Broadcast
          Protocol (PBP)

Broadcast: PECHO-11
BBS: PECHO-12

This from the AO-51 Command team:
6 Nov (Saturday night)
38k4 Digital Downlink, V/U, PBP BBS (Pacsat Broadcast Protocol BBS)
Uplink: 145.860 mhz FM, 9k6 PBP Digital
Downlink: 435.150 mhz FM, 38k4 PBP Digital

14 Nov
FM Repeater, V/S
Uplink: 145.920 mhz FM, 67hz PL Tone
Downlink 2401.200 mhz FM

21 Nov
FM Repeater, V/U
Uplink: 145.920 mhz FM, 67 hz PL Tone
Downlink 435.300 mhz FM
9k6 Digital, V/U, PBP BBS (Pacsat Broadcast Protocol BBS)
Uplink: 145.860 mhz FM, 9k6 PBP Digital
Downlink: 435.150 mhz FM, 9k6 PBP Digital

5 Dec
FM Repeater, L/U
Uplink: 1268.700 mhz FM
Downlink 435.300 mhz FM

8 Dec (Wed Night)
9k6 Digital, V/U, High Power, PBP BBS (Pacsat Broadcast Protocol BBS)
Uplink: 145.860 mhz FM, 9k6 PBP Digital
Downlink: 435.150 mhz FM, 9k6 PBP Digital

12 Dec
FM Repeater, V/S
Uplink: 145.920 mhz FM, No PL Tone
Downlink 2401.200 mhz FM

19 Dec
FM Repeater, V/U
Uplink: 145.920 mhz FM, 67 hz PL Tone
Downlink 435.300 mhz FM
9k6 Digital, V/U, PBP BBS (Pacsat Broadcast Protocol BBS)
Uplink: 145.860 mhz FM, 9k6 PBP Digital
Downlink: 435.150 mhz FM, 9k6 PBP Digital

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that SO-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10 minute timer.

[09122004]

=====

FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

John, N4QWL reports on July 16th, 2005:

Last evening I had a AOS to LOS qso with WI2W. FO-29 came up at 01:17z here in FM07 and I found WI2W and we chatted until 01:33z. The satellite was at 2 degrees elevation when I finally heard him start to crackle a bit. What a great QSO! To think that I watched this bird launch back in 1996 and it is still working so well is a real thrill. I believe I still have the video. I might just look for it and watch it again. Boy do I love this satellite stuff! Look for you all up there.

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will automatically analyze all digital telemetry from the satellite (such as current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[ANS-WSR wishes to thanks John, N4QWL for this week's report]
[11132005]

=====

AO-27 AMRAD
Catalog number: 22825
Launched: September 26, 1993

Status: Operational

Uplink: 145.850 MHz FM
Downlink: 436.795 MHz FM

The latest information on AO-27 from control operator Michael Wyrick, N3UC (former N4USI), can be found at:
http://www.ao27.org

An AO-27 question-and-answer page is available on the AMSAT-NA web site, with updates by Ray, W2RS. The URL is:
http://www.amsat.org/amsat/intro/ao27faq.html

[ANS-WSR thanks John, K6YK, for this week's AO-27 report]

=====

AO-7 AMSAT OSCAR 7
Catalog number: 07530
Launch Date: November 15, 1974

Status: Semi-operational in sunlight.
Return to active status: June 21,2002

```
Uplink:     145.850 to 145.950 MHz CW/USB Mode A
            432.125 to 432.175 MHz CW/LSB Mode B
Downlink:    29.400 to  29.500 MHz CW/USB Mode A
            145.975 to 145.925 MHz CW/USB Mode B
Beacon:     29.502 MHz, 145.972 MHz, 435.1 MHz, 2304.1 MHz
```

Emily, W0EEC has created a website to allow the users of AO-7 to record contacts, observations and use of the satellite more effectively at:
http://www.emilyshouse.com/experthams/ao7/main.php
This includes the ability to log contacts.

Tim, K3TZ has written a program to decode AO-07 telemetry.
The program can be downloaded at:
http://www.qsl.net/k3tz/files/K3TZ_AO-07_Telemetry_Decoder_0.5.zip

For more AO-7 info:
http://www.amsat.org/amsat/sats/n7hpr/ao7.html

=====
INTERNATIONAL SPACE STATION (ISS) - ARISS
Catalog number: 25544
Launch date: November 20, 1998

Status: Operational
Current Mode: DIGIPEATER
Digipeater: ACTIVE

The current Expedition 12 crew is:
Commander: William McArthur - KC5ACR
Flight Engineer: Valery Tokarev - (no call)

Worldwide packet uplink: 145.990 MHz FM
Region 1 voice uplink: 145.200 MHz FM
Region 2/3 voice uplink: 144.490 MHz FM
Worldwide downlink: 145.800 MHz FM

Repeater Uplink: 437.800 MHz FM
Repeater Downlink: 145.800 MHz FM
Doppler Shift is 10 KHz

Russian callsigns: RS0ISS, RZ3DZR
USA callsign: NA1SS
Packet station mailbox callsign: RS0ISS-11
Packet station keyboard callsign: RS0ISS-3
Digipeater callsign: ARISS

The ISS Fan Club Webpage < http://www.issfanclub.com > reports that the Digipeater is active as of Nov 14th, 2005 at 0207UTC.

The ISS daily crew schedule can be found at:
http://spaceflight.nasa.gov/station/timelines/
Remember that the crew operates on UTC time. Also, all of the time line is NOT translated from Russian and posted.

SB SAT @ AMSAT <W8ISS $ANS-317.S2
WSR 317 Part 2 11/13/2005

AMSAT NEWS SERVICE BULLETIN 317.S2 FROM AMSAT HQ

SILVER SPRING, MD, November 13, 2005
TO ALL RADIO AMATEURS
BID: $ANS-317.S2

PCSAT2 ?0-??
Catalog Number:
Launch Date: August 1, 2005

Status: Operational

PCSAT2 was installed on the exterior of the International Space Station and was activated on August 3, 2005.

PCSAT2 CAPABILITIES: PCSAT2 is attached to the ISS and so its operations must be in cooperation with the ARISS communications suite to minimize any mutual interference and to coordinate activities. Here are the capabilities of the PCSAT2 and ARISS payloads:

PCSAT SYSTEM A:

435.275 PCSAT2 DOWNLINK 1200 baud packet with uplink on 145.825
435.275 PCSAT2 DOWNLINK Occasional user PSK-31 continuous downlink
145.825 PCSAT2 DOWNLINK 1200 baud packet

PCSAT SYSTEM B:

437.975 PCSAT2 DOWNLINK periodic Solar Cell data and PCSAT2 telemetry at 9600 baud
437.975 PCSAT2 DOWNLINK TNC-B command downlink at 1200 baud
437.975 PCSAT2 DOWNLINK User Voice Repeater with VHF uplink
437.975 PCSAT2 DOWNLINK Packet digipeater with VHF uplink

It looks like PCSAT2 can best contribute at this time by operating in PSK-31 mode for the near future. This is a very exciting new transponder mode which solves the congestion problem on FM repeaters by letting multiple stations all communicate at the same time.

PSK-31 users are welcome to try out the new PCSAT2 PSK-31 transponder on ISS with an uplink on 29.402 +/- 1 KHz and downlink on 435.275 +/- Doppler using FM.

The FM downlink lets everyone operate full duplex and everyone to see the same view of the passband as everyone else. THus you can see exactly
what your signal looks like to everyone else.

Help Wanted:

Here is your chance to become a viable part of the Amateur Satellite Community.

We are looking for a volunteer satellite packet station in Hawaii that is interested in helping with telemetry and sat-gating of PCSAT2 and ARISS packets. Requirements are:

1) General familiarity with packet
2) TNC connected to a cross band radio that can RX on UHF and TX on VHF.
3) modest UHF beam and rotator system.

Contact WB4APR for more information.

Packets seen from PCSAT2 can be reviewed at:
http://www.findu.com/cgi-bin/pcsat2.cgi

A screen shot of both the 9600 bps and 1200 bps decoded data as seen by Simon, 9W2QC, can be seen at:
http://www.9w2qc.net/pcsat2/

More information on PCSAT2 can be found at:
http://web.usna.navy.mil/~bruninga/pcsat2.html

[ANS-WSR thanks Bob, WB4APR and the U.S. Naval Academy Satellite Lab for the aboveinformation.]

=====
NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Non-Operational?????

Uplink/downlink:	145.827 MHz 1200 baud AX.25 AFSK via W3ADO-1
Aux/Uplink:	435.250 MHz 9600 baud via PCSAT-2 (off)
APRS Downlink:	144.390 MHz (Region 2)

PCSat is a 1200-baud APRS digipeater designed for use by stations using hand-held or mobile transceivers. Downlinks feed a central web site at: http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy under the guidance of Bob Bruninga, WB4APR.
[07242005]
=====
CUTE-1

Catalog number: 27844
Launched: June 30,2003

Status: Operational

Uplink: ?
Downlink: 436.8375 CW
437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ?)
Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as OPERATIONAL?
Indeed it is very operational as a CUBESAT sending CW telemetry on 436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at 14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz. Initial orbital parameters were period 101.4 min, apogee 831 km, perigee 819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

[ANS WSR wishes to thank Cliff, K7RR, for this week's information]
[07242005]
=====
GO-32 TECHSAT-1B
Catalog number: 25397
Launch Date: July 10, 1998

Status: Operational

Downlink: 435.225 MHz FM (9600-baud FSK)
(435.325 n/a - temperature problems)
Uplinks: 145.850, 145.890, 145.930 FM
1269.700, 1269.800, 1269.900 FM
Broadcast Callsign: 4XTECH-11
BBS Callsign: 4XTECH-12

More information of GO-32 can be found at:
http://www.iarc.org/techsat/techsat.html
[03132005]
=====
MO-46 TIUNGSAT-1
Catalog number: 26548

Launched: September 26, 2000

Status: Operational

Uplink: 145.850 or 145.925 MHz 9600-baud FSK
Downlink: 437.325 MHz
Broadcast callsign: MYSAT3-11
BBS: MYSAT3-12

TiungSat-1 is Malaysia's first micro-satellite and in addition to commercial land and weather imaging payloads offers FM and FSK Amateur Radio communication.

TiungSat-1, named after the mynah bird of Malaysia, was developed as a collaborative effort between the Malaysian government and Surrey Satellite Technology Ltd.
[05152005]

=====

AO-16 PACSAT
Catalog number: 20439
Launch Date: January 22, 1990

Status: Semi-operational, the digipeater command is on and open for APRS users.

Uplink: 145.90 145.92 145.94 145.96 MHz FM
(using 1200-baud Manchester FSK)
Downlink: 437.026 MHz SSB (1200-baud PSK)
Mode-S Beacon: 2401.1428 MHz
Broadcast Callsign: PACSAT-11
BBS: PACSAT-12

A WOD collection of current graphics along with general information and telemetry samples can be found at:
http://www.telecable.es/personales/ea1bcu
[05092004]

=====

UO-11 OSCAR-11
Catalog number: 14781
Launched: March 1, 1984

Status: Semi-operational?

Telemetry Downlink: 145.826 MHz. FM (1200-baud AFSK).
approx. 10 days ON, 10 days OFF
Mode-S Beacon: 2401.500 MHz. ... OFF
UHFBeacon: 435.025 MHz. ... OFF

During the period 24 September to 25 October 2005 the VHF beacon on 145.826MHz resumed transmissions, as expected, on 30 September, sometime between 06:05 and 06:42 UTC passes. Reasonable signals were also captured on the 17:44 pass, later that day. However by the 16:49 UTC pass on 02 October, the beacon had switched OFF. Transmissions resumed on 21 October, and should continue until around 31 October.

The on-board clock continues to show a very large error. Currently it is 19.2394 days slow, having lost six hours while the beacon was last OFF, ie. between 02 October and 21 October. When the beacon is ON, the clock is stable to within a few seconds.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working.

The eclipses have now ended, and the satellite should be in continuous sunlight for the remainder of this year, and well into next year. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures.

The watchdog timer appears to be operating on the 20 day cycle, ie. approximately ten days ON followed by 10 days OFF. It appears to be uneffected by problems of the on-board clock. However, poor solar attitude, and battery problems, may be combining to produce a low line voltage. This causes the beacon to switch OFF premeaturely, and resets the watchdog timer cycle.

The Beacon frequencies are -
VHF 145.826 MHz. AFSK FM ASCII Telemetry
UHF 435.025 MHz. OFF
S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is
www.users.zetnet.co.uk/clivew/

If you place this bulletin on a terrestrial packet network, please use the bulletin identifier $BID:U2RPT114.CWV, to prevent duplication.

[ANS thanks Clive G3CWV for the above information]

More information on UO-11 OSCAR-11 can be found at:
http://www.users.zetnet.co.uk/clivew/

MPEG3 files can be found here at Mineo, JE9PEL website:

SB SAT @ AMSAT <W8ISS $ANS-317.S3
WSR 317 Part 3 11/13/2005

AMSAT NEWS SERVICE BULLETIN 317.S3 FROM AMSAT HQ

SILVER SPRING, MD, NOVENBER 13, 2005
TO ALL RADIO AMATEURS
BID: $ANS-317.S3

THE FOLLOWING ARE IN ORBIT BUT ARE
NON-OPERATIONAL AT THIS TIME:

POSAT-1 PO-28
Catalog Number: 22829
Launched : September 25, 1993

Status: Operational - Not open for Amatuer use

Downlink: 435.250 MHz
435.275 MHz

Uplink: 145.925 MHz
145.975 MHz

Broadcast callsign: POSAT1-11
BBS callsign: POSAT1-12

PO-28 (POSAT-1), Portugal's first satellite, launched 12 years ago,will be turned over to Amateur Radio use in the very near future. That was the word July 30 from AMSAT-UK Secretary Jim Heck, G3WGM, during the AMSAT-UK International Space Colloquium in Guildford, England.

Launched September 25, 1993, the satellite operated as a packet store-and-forward BBS (9600 baud FM FSK) on Amateur Radio frequencies for several weeks in early 1994. Over the years, PO-28's primary usage has been commercial, although plans have called for eventually shifting its operation to ham radio use. G3WGM reports that following lengthy negotiations it has been agreed that the satellite can be switched permanently to amateur frequencies. The changeover is expected to take a couple of weeks.

The Portuguese satellite was built at the University of Surrey as part of a collaborative satellite technology program that involved industry and academe. Uplink frequencies will be 145.925 and 145.975 MHz. Downlink frequencies will be 435.250 and 435.275 MHz. More information on PO-28 is on the AMSAT Web site

http://www.amsat.org/amsat/sats/n7hpr/po28.html.

Uplink Frequencies: 145.925 and 145.975 MHz
Downlink Frequencies: 435.250 and 435.275 MHz

Orbit: 822 x 800 km, 98.6 deg inclined, sun-synchronous.

Transponder capabilities include FM repeater and 38k4 data. If you want to hear how loud this satellite is, listen on 429.950 until the change back to amateur radio service.

Keplerian elements for PO-28 are currently contained in the AMSAT keps bulletins and at Celestrak in amateur.txt using the name "POSAT". Users of Space Track should query the NORAD Satellite ID number 22829. The name listed by Space Track is "EYESAT A".

More information of POSAT-1 can be found at:
http://www.ee.surrey.ac.uk/SSC/CSER/UOSAT/missions/posat1.html
http://www.amsat.org/amsat/sats/n7hpr/po28.html
[ANS wishes to thank Duane Naugle, KO6BT, for this week's update.]

=====

AO-10 OSCAR 10
Catalog number: 14129
Launched: June 16, 1983

Status: Non-operational

Uplink: 435.030 to 435.180 MHz CW/LSB
Downlink: 145.975 to 145.825 MHz CW/USB
Beacon: 145.810 MHz (unmodulated carrier)

AO-10 has been locked into a Mode-B, 70-cm uplink and 2-meter downlink for several years.

W4SM has more information about the satellite at the following URL:
http://www.cstone.net/~w4sm/AO-10.html

IO-26 ITAMSAT
Catalog number: 22826
Launch Date: September 26, 1993

Status: Non-operational

Uplink: 145.875 145.900 145.925 145.950 MHz FM (1200-baud)
Downlink: 435.812 MHz SSB
Broadcast Callsign: ITMSAT-11
BBS: ITMSAT-12

Alberto E. Zagni - I2KBD reports on 02/13/05

The spacecraft is in MBL (safe mode) and is trasmitting just 6 channels of telemetry. Temperatures and voltage are nominal, but there seems to be a problem with the onboard receiver, refusing to accept commands. The spacecraft was launched in 1993, thus nearing 12 years in orbit...

Best regards
Alberto E. Zagni - I2KBD
ITAMSAT Mission Director

PO-34 PANSAT
Catalog number: 25520
Launched: October 30, 1998

Status: Telemetry downloads only

Uplink/downlink frequency (listed on the PanSat web site) 436.500 MHz

The satellite is not available for general uplink transmissions.

The Naval Postgraduate School developed PanSat. At the time of launch, PanSat spread-spectrum digital transponders were to be available to Amateur Radio operators along with software to utilize this technology.

The satellite is still operating, however, the spread spectrum packet radio portion never took place. The spacecraft is now beyond it's initial 2-year mission life, but telemetry records are still being

```
downloaded.

For more information, visit the official PanSat web site at:
http://www.sp.nps.navy.mil/pansat/

=====
AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio and telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at:
http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

PROPOSED FOR LAUNCH AT THIS TIME:

UCISAT ?O-??
Catalog number:
Proposed Launch Date: October 31, 2005

Status: Under Construction

Downlink: Submission in Progress
Uplink: Submission in Progress
Callsign: Submission in Progress

This from Matt Bennett, KF6RTB, UCISAT Communications Team Member:

Our website is www.ucisat.net .This is a new website, however, and doesn't have the "Status" section active yet. Because of the growing interest in our project, I'll push our webmaster to create updates (hopefully) on a week-to-week basis. For now, the current status of the mission is as follows:

-Expected Launch Date: October 31st, 2005
-Frequency Allocation: Submission in Progress
-Construction Status: Sub-Assembly
[WSR to thank Matt Bennett, KF6RTB, for this week's report.]
[01302005]
=====
SSETI ?O-??
Catalog Number:
Launch Date: October 27, 2005

Status: ????

The SSETI Express satellite launched at 06:52 UTC on Thursday, 27 October 2005 on board a Kosmos 3M launcher. One hundred and three minutes later, exactly on schedule, the first signals were heard form the groundstation in Aalborg, and two-way communication was established. In addition to several successful communication sessions with SSETI Express, two of the Cubesat passengers, UWE-1 and Xi-V, have been heard by their groundstations.

An official release from ESA stated, "22:20 CEST SSETI Express went into

a safe mode due to an undervoltage caused by battery charging problems. The operations team is working actively to resume nominal operations of the satellite and is receiving tremendous help in the process from the amateur radio community. At the time of the anomaly many mission milestones had already successfully
been met."

Graham, UA/G3VZV reports, "that it seems that no reliable reports of any signals have been received and the teams are reviewing all the telemetry already received to fully understand what is happening on board.Initial review suggests that there is a significant chance that the power supply problem may correct itself." Graham also advises that the command station in Aalborg is planning to try to try a blind command of the satellite into S band on mode - maybe on a Sunday am pass at 10:30 UTC.

As the statement above makes clear, ESA and the SSETI Association greatly value the input that amateur operators are providing and would ask amateurs around the world to continue to check for signals on 437.250MHz at the appropriate pass times. These signals may be short bursts of 9k6 data every 18 secs or bursts of pulse telemetry every 30 secs. Please understand that the pulse beacon decoder can produce spurious results on plain noise if over driven!

Anyone hearing anything that matches the above detail is requested to please email details to missioncontrol@sseti.org

The type of the first transmissions will depend on the state of the battery.

In Nominal mode - a sub 1 second burst of AX25 9k6 FSK telemetry every 18 seconds on the downlink frequency of 437.250 MHz.

In Recovery or Safe mode - simple on/off telemetry comprising 16 x 100 msec carrier pulses. This telemetry is repeated every 30 seconds in Safe Mode and every 2 minutes when in Recovery Mode.

The satellite will transmit at a power of 3 watts.

oN

A daily report of the launch campaign is being maintained at http://sseti.gte.tuwien.ac.at/express/mop/index.php?uri=news.html This mission operations site is completely up-to-date regarding Kepler TLEs and other LEOP "Launch and Early Operations Phase" details.

The SERACC software, needed to decode and submit the received data to the SSETI database, together with some audio files containing recorded 9k6 signals to experiment with is also now available

The ESA website about SSETI Express is at:
http://www.esa.int/SPECIALS/sseti_express/SEMARJ7X9DE_0.html

The latest version of the SSETI Express handbook can be downloaded free

of charge from the AMSAT-UK website at:
http://www.uk.amsat.org/

[ANS thanks Graham, UA/G3VZV and Trevor, M5AKA for the above]

SUITSAT ?O-??
Catalog Number:
Proposed Release Date: December 8th, 2005

Proposed Callsign: RS0RS ?
Proposed Transmit Frequency: 145.990

This from Miles, WF1F:
At the present time there are tentative plans to have a Space Walk (EVA)
tak-
```

ing place from ISS sometime around December 8, 2005. It is possible that during this Space Walk, the ISS crew may Hand launch the ARISS SuitSat project during that EVA mission. Again, all date are subject to last minute changes. Please Keep monitoring the ARISS and AMSAT web pages for more updates.

The SuitSat project is a free floating Unmanned satellite that will be running on Batteries Only! The life span of the project will be limited to the power in the batteries. SuitSat may last as little as 1 week or as long as 6 weeks. So it is very important for you to get your satellite monitoring station ready now. You should not wait for the Official activation date, because you may miss the opportunity to hear the new bird.

I will keep posting updated links for the SuitSat project as they become available.

This from Frank H. Bauer, KA3HDO:

Yes, we have set the SuitSat-1 downlink to be the same as the Packet uplink. The ARISS/Human Spaceflight team have a very limited set of frequencies in the 2 meter OSCAR sub-band (145.80-146 MHz). 145.99 is one of them.

As Miles Mann, WF1F, described, we will be reconfiguring the Kenwood D700E from packet mode. Our tentative plan is to set the D700 into a repeater mode with that will enable the ISS radio to repeat the Suitsat audio on 70 cm, specifically, 437.80 MHz.

All hams are requested to refrain from uplinking packet (or voice) on 145.99 during Suitsat operations. This will allow you and your local neighbors to better hear the SuitSat downlink. SuitSat will only be operational for a few days.....we all would like to get the most of its operations. So please due your best to abide by this plan.

We will continue to provide late-breaking information on SuitSat plans on the following web sites. Please check them often. And get your stations ready to copy the audio, voice telemetry, and SSTV picture.

Hi All,

I need basic material on how to use IC910H for data communication. If anybody out there know information please help me on this.

Thanks a lot in advance.

Regards,
Prakash

AO-51 ECHO
Catalog number: 28375
Launch date: June 29, 2004

Status: Testing
Curent Mode: PBBS - V/U 9k6
VOICE REPEATER - V/U FM

Analog voice downlink: 435.300 MHz FM
435.150 MHz FM
Analog voice uplink: 145.880 MHZ FM
145.920 MHz FM 67Hz PL tone
1268.700 MHz FM 67Hz PL tone

Digital Downlinks: 435.150 MHz FM, 38k4 Digital, PBP, 1 watt output
2401.200 MHz FM 38k4 bps, AX.25
Digital Uplink: 145.860 MHz FM, 9k6 Digital, Pacsat Broadcast Protocol (PBP)

Broadcast: PECHO-11
BBS: PECHO-12

This from the AO-51 Command team:

21 Nov
FM Repeater, V/U
Uplink: 145.920 mhz FM, 67 hz PL Tone
Downlink 435.300 mhz FM
9k6 Digital, V/U, PBP BBS (Pacsat Broadcast Protocol BBS)
Uplink: 145.860 mhz FM, 9k6 PBP Digital
Downlink: 435.150 mhz FM, 9k6 PBP Digital

5 Dec
FM Repeater, L/U
Uplink: 1268.700 mhz FM
Downlink 435.300 mhz FM

8 Dec (Wed Night)
9k6 Digital, V/U, High Power, PBP BBS (Pacsat Broadcast Protocol BBS)
Uplink: 145.860 mhz FM, 9k6 PBP Digital
Downlink: 435.150 mhz FM, 9k6 PBP Digital

12 Dec
FM Repeater, V/S
Uplink: 145.920 mhz FM, No PL Tone
Downlink 2401.200 mhz FM

19 Dec
FM Repeater, V/U

Uplink: 145.920 mhz FM, 67 hz PL Tone
Downlink 435.300 mhz FM
9k6 Digital, V/U, PBP BBS (Pacsat Broadcast Protocol BBS)
Uplink: 145.860 mhz FM, 9k6 PBP Digital
Downlink: 435.150 mhz FM, 9k6 PBP Digital

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that SO-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz. The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10 minute timer.

[09122004]

=====
FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

John, N4QWL reports on July 16th, 2005:
Last evening I had a AOS to LOS qso with WI2W. FO-29 came up at 01:17z here

in
FM07 and I found WI2W and we chatted until 01:33z. The satellite was at 2 degrees elevation when I finally heard him start to crackle a bit. What a great QSO! To think that I watched this bird launch back in 1996 and it is still working so well is a real thrill. I believe I still have the video. I might just look for it and watch it again. Boy do I love this satellite stuff!
Look for you all up there.

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will automatically analyze all digital telemetry from the satellite (such as current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[ANS-WSR wishes to thanks John, N4QWL for this week's report]
[11132005]
=====
AO-27 AMRAD
Catalog number: 22825
Launched: September 26, 1993

Status: Operational

```
Uplink:     145.850 MHz FM
Downlink:   436.795 MHz FM
```

The latest information on AO-27 from control operator Michael Wyrick, N3UC (former N4USI), can be found at:
http://www.ao27.org

An AO-27 question-and-answer page is available on the AMSAT-NA web site, with updates by Ray, W2RS. The URL is:
http://www.amsat.org/amsat/intro/ao27faq.html

[ANS-WSR thanks John, K6YK, for this week's AO-27 report]
[11132005]
=====
AO-7 AMSAT OSCAR 7
Catalog number: 07530
Launch Date: November 15, 1974

Status: Semi-operational in sunlight.
Return to active status: June 21,2002

```
Uplink:     145.850 to 145.950 MHz CW/USB Mode A
            432.125 to 432.175 MHz CW/LSB Mode B
Downlink:    29.400 to  29.500 MHz CW/USB Mode A
            145.975 to 145.925 MHz CW/USB Mode B
Beacon:     29.502 MHz, 145.972 MHz, 435.1 MHz, 2304.1 MHz
```

Emily, W0EEC has created a website to allow the users of AO-7 to record

contacts, observations and use of the satellite more effectively at:
http://www.emilyshouse.com/experthams/ao7/main.php
This includes the ability to log contacts.

Tim, K3TZ has written a program to decode AO-07 telemetry.
The program can be downloaded at:
http://www.qsl.net/k3tz/files/K3TZ_AO-07_Telemetry_Decoder_0.5.zip

For more AO-7 info:
http://www.amsat.org/amsat/sats/n7hpr/ao7.html

=====
INTERNATIONAL SPACE STATION (ISS) - ARISS
Catalog number: 25544
Launch date: November 20, 1998

Status: Operational
Current Mode: DIGIPEATER
Digipeater: ACTIVE

The current Expedition 12 crew is:
Commander: William McArthur - KC5ACR
Flight Engineer: Valery Tokarev - (no call)

Worldwide packet uplink: 145.990 MHz FM
Region 1 voice uplink: 145.200 MHz FM
Region 2/3 voice uplink: 144.490 MHz FM
Worldwide downlink: 145.800 MHz FM

Repeater Uplink: 437.800 MHz FM
Repeater Downlink: 145.800 MHz FM
Doppler Shift is 10 KHz

Russian callsigns: RS0ISS, RZ3DZR
USA callsign: NA1SS
Packet station mailbox callsign: RS0ISS-11
Packet station keyboard callsign: RS0ISS-3
Digipeater callsign: ARISS

The ISS Fan Club Webpage < http://www.issfanclub.com > reports that the Digipeater is active as of Nov 14th, 2005 at 0207UTC.

The ISS daily crew schedule can be found at:
http://spaceflight.nasa.gov/station/timelines/
Remember that the crew operates on UTC time. Also, all of the time line is NOT translated from Russian and posted.

SB SAT @ AMSAT <W8ISS $ANS-324.S2
WSR 324 Part 2 11/20/2005

AMSAT NEWS SERVICE BULLETIN 324.S2 FROM AMSAT HQ
SILVER SPRING, MD, November 20, 2005
TO ALL RADIO AMATEURS
BID: $ANS-324.S2

PCSAT2 ?0-??
Catalog Number:
Launch Date: August 1, 2005

Status: Operational

PCSAT2 was installed on the exterior of the International Space Station and was activated on August 3, 2005.

PCSAT2 CAPABILITIES: PCSAT2 is attached to the ISS and so its operations must be in cooperation with the ARISS communications suite to minimize any mutual interference and to coordinate activities. Here are the capabilities of the PCSAT2 and ARISS payloads:

PCSAT SYSTEM A:

435.275 PCSAT2 DOWNLINK 1200 baud packet with uplink on 145.825
435.275 PCSAT2 DOWNLINK Occasional user PSK-31 continuous downlink
145.825 PCSAT2 DOWNLINK 1200 baud packet

PCSAT SYSTEM B:

437.975 PCSAT2 DOWNLINK periodic Solar Cell data and PCSAT2 telemetry at 9600 baud
437.975 PCSAT2 DOWNLINK TNC-B command downlink at 1200 baud
437.975 PCSAT2 DOWNLINK User Voice Repeater with VHF uplink
437.975 PCSAT2 DOWNLINK Packet digipeater with VHF uplink

It looks like PCSAT2 can best contribute at this time by operating in PSK-31 mode for the near future. This is a very exciting new transponder mode which solves the congestion problem on FM repeaters by letting multiple stations all communicate at the same time.

PSK-31 users are welcome to try out the new PCSAT2 PSK-31 transponder on ISS with an uplink on 29.402 +/- 1 KHz and downlink on 435.275 +/- Doppler using FM.

The FM downlink lets everyone operate full duplex and everyone to see the same view of the passband as everyone else. THus you can see

exactly
what your signal looks like to everyone else.

Help Wanted:

Here is your chance to become a viable part of the Amateur
Satellite Community.

We are looking for a volunteer satellite packet
station in Hawaii that is interested in helping with
telemetry and sat-gating of PCSAT2 and
ARISS packets. Requirements are:

1) General familiarity with packet
2) TNC connected to a cross band radio that
can RX on UHF and TX on VHF.
3) modest UHF beam and rotator system.

Contact WB4APR for more information.

Packets seen from PCSAT2 can be reviewed at:
http://www.findu.com/cgi-bin/pcsat2.cgi

A screen shot of both the 9600 bps and 1200 bps decoded data
as seen by Simon, 9W2QC, can be seen at:
http://www.9w2qc.net/pcsat2/

More information on PCSAT2 can be found at:
http://web.usna.navy.mil/~bruninga/pcsat2.html

[ANS-WSR thanks Bob, WB4APR and the U.S. Naval Academy Satellite Lab for
the aboveinformation.]

=====
NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Operational

Uplink/downlink: 145.827 MHz 1200 baud AX.25 AFSK via W3ADO-1
Aux/Uplink: 435.250 MHz 9600 baud via PCSAT-2 (off)
APRS Downlink: 144.390 MHz (Region 2)

PCSat is a 1200-baud APRS digipeater designed for use by stations using hand-held or mobile transceivers. Downlinks feed a central web site at: http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy under the guidance of Bob Bruninga, WB4APR.
[11202005]
=====
CUTE-1
Catalog number: 27844
Launched: June 30,2003

Status: Operational

```
Uplink:          ?
Downlink:     436.8375 CW
              437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ? )
```
Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as OPERATIONAL?
Indeed it is very operational as a CUBESAT sending CW telemetry on 436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:
```
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6
```

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at 14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz. Initial orbital parameters were period 101.4 min, apogee 831 km, perigee 819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

[ANS WSR wishes to thank Cliff, K7RR, for this week's information]
[07242005]
=====
GO-32 TECHSAT-1B
Catalog number: 25397
Launch Date: July 10, 1998

Status: Operational

```
Downlink:           435.225 MHz FM (9600-baud FSK)
                   (435.325 n/a - temperature problems)
Uplinks:            145.850, 145.890, 145.930 FM
                   1269.700, 1269.800, 1269.900 FM
Broadcast Callsign: 4XTECH-11
BBS Callsign:       4XTECH-12
```

Jeff, KB2M, reports November 15th, 2005:

I might be wrong about this, but as I am the only one I see working GO-32 here goes. If you do a DIR request up on the 145.890 uplink the bird turns on. Give it a try....

More information of GO-32 can be found at:
http://www.iarc.org/techsat/techsat.html
[ANS-WSR wishes to thank Jeff, KB2M for this weeks report.]

=====

UO-11 OSCAR-11
Catalog number: 14781
Launched: March 1, 1984

Status: Semi-operational?

Telemetry Downlink: 145.826 MHz. FM (1200-baud AFSK).
approx. 10 days ON, 10 days OFF
Mode-S Beacon: 2401.500 MHz. ... OFF
UHFBeacon: 435.025 MHz. ... OFF

During the period 24 September to 25 October 2005 the VHF beacon on 145.826MHz resumed transmissions, as expected, on 30 September, sometime between 06:05 and 06:42 UTC passes. Reasonable signals were also captured on the 17:44 pass, later that day. However by the 16:49 UTC pass on 02 October, the beacon had switched OFF. Transmissions resumed on 21 October, and should continue until around 31 October.

The on-board clock continues to show a very large error. Currently it is 19.2394 days slow, having lost six hours while the beacon was last OFF, ie. between 02 October and 21 October. When the beacon is ON, the clock is stable to within a few seconds.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working.

The eclipses have now ended, and the satellite should be in continuous sunlight for the remainder of this year, and well into next year. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures.

The watchdog timer appears to be operating on the 20 day cycle, ie. approximately ten days ON followed by 10 days OFF. It appears to be uneffected by problems of the on-board clock. However, poor solar attitude, and battery problems, may be combining to produce a low line voltage. This causes the beacon to switch OFF premeaturely, and resets the watchdog timer cycle.

The Beacon frequencies are -
VHF 145.826 MHz. AFSK FM ASCII Telemetry
UHF 435.025 MHz. OFF
S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains
an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is:

www.users.zetnet.co.uk/clivew/

If you place this bulletin on a terrestrial packet network, please use the bulletin identifier $BID:U2RPT114.CWV, to prevent duplication.

PO-28 (POSAT-1), Portugal's first satellite, launched 12 years ago,will
be

turned over to Amateur Radio use in the very near future. That was the word July 30 from AMSAT-UK Secretary Jim Heck, G3WGM, during the AMSAT-UK International Space Colloquium in Guildford, England.

Launched September 25, 1993, the satellite operated as a packet store-and-forward BBS (9600 baud FM FSK) on Amateur Radio frequencies for several weeks in early 1994. Over the years, PO-28's primary usage has been commercial, although plans have called for eventually shifting its operation to ham radio use. G3WGM reports that following lengthy negotiations it has been agreed that the satellite can be switched permanently to amateur frequencies. The changeover is expected to take a couple of weeks.

The Portuguese satellite was built at the University of Surrey as part of a collaborative satellite technology program that involved industry and academe.
Uplink frequencies will be 145.925 and 145.975 MHz. Downlink frequencies will be 435.250 and 435.275 MHz. More information on PO-28 is on the AMSAT Web site

http://www.amsat.org/amsat/sats/n7hpr/po28.html.

Uplink Frequencies: 145.925 and 145.975 MHz
Downlink Frequencies: 435.250 and 435.275 MHz

Orbit: 822 x 800 km, 98.6 deg inclined, sun-synchronous.

Transponder capabilities include FM repeater and 38k4 data. If you want to hear how loud this satellite is, listen on 429.950 until the change back to amateur radio service.

Keplerian elements for PO-28 are currently contained in the AMSAT keps bulletins and at Celestrak in amateur.txt using the name "POSAT". Users of Space Track should query the NORAD Satellite ID number 22829. The name listed by Space Track is "EYESAT A".

More information of POSAT-1 can be found at:
http://www.ee.surrey.ac.uk/SSC/CSER/UOSAT/missions/posat1.html
http://www.amsat.org/amsat/sats/n7hpr/po28.html
[ANS-WSR wishes to thank Duane Naugle, KO6BT, for this week's update.]

=====

AO-10 OSCAR 10
Catalog number: 14129
Launched: June 16, 1983

Status: Non-operational

Uplink: 435.030 to 435.180 MHz CW/LSB
Downlink: 145.975 to 145.825 MHz CW/USB
Beacon: 145.810 MHz (unmodulated carrier)

AO-10 has been locked into a Mode-B, 70-cm uplink and
2-meter downlink for several years.

W4SM has more information about the satellite at the following URL:
http://www.cstone.net/~w4sm/AO-10.html

=====
IO-26 ITAMSAT
Catalog number: 22826
Launch Date: September 26, 1993

Status: Non-operational

Uplink: 145.875 145.900 145.925 145.950 MHz FM (1200-baud)
Downlink: 435.812 MHz SSB
Broadcast Callsign: ITMSAT-11
BBS: ITMSAT-12

Alberto E. Zagni - I2KBD reports on 02/13/05
The spacecraft is in MBL (safe mode) and is trasmitting just 6 channels
of telemetry. Temperatures and voltage are nominal, but there seems to
be a problem with the onboard receiver, refusing to accept commands.
The spacecraft was launched in 1993, thus nearing 12 years in orbit...

Best regards
Alberto E. Zagni - I2KBD
ITAMSAT Mission Director

More information of IO-26 can be found at:

http://joshua.micronet.it/english/itamsat/itamsathome.html
http://www.amsat.org/amsat/sats/n7hpr/io26.html

PO-34 PANSAT
Catalog number: 25520
Launched: October 30, 1998

Status: Telemetry downloads only

Uplink/downlink frequency (listed on the PanSat web site) 436.500 MHz

The satellite is not available for general uplink transmissions.

The Naval Postgraduate School developed PanSat. At the time of launch, PanSat spread-spectrum digital transponders were to be available to Amateur Radio operators along with software to utilize this technology.

The satellite is still operating, however, the spread spectrum packet radio portion never took place. The spacecraft is now beyond it's initial 2-year mission life, but telemetry records are still being downloaded.

For more information, visit the official PanSat web site at:
http://www.sp.nps.navy.mil/pansat/
[05092004]
=====

MO-46 TIUNGSAT-1
Catalog number: 26548
Launched: September 26, 2000

Status: Operational

Uplink: 145.850 or 145.925 MHz 9600-baud FSK
Downlink: 437.325 MHz
Broadcast callsign: MYSAT3-11
BBS: MYSAT3-12

TiungSat-1 is Malaysia's first micro-satellite and in addition to
commercial land and weather imaging payloads offers FM and FSK
Amateur Radio communication.

TiungSat-1, named after the mynah bird of Malaysia, was developed as
a collaborative effort between the Malaysian government and Surrey
Satellite Technology Ltd.
[11202005]

=====

AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small
German
scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS
e.V." (German
acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der
Schule",
which means: 'working group for amateur radio and telecommunications in
schools'). AO-49 is designed as a "store and broadcast" system for APRS
based
messages, dedicated for the use of schools in combination with the
existing
WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears
AO-49 is
not properly aligned to illuminate the solar panels. This should end
soon. Due
to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to
allow
decoding of the received DATA0 frames. It is available at:
http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

SUITSAT ?O-??
Catalog Number:
Proposed Release Date: December 8th, 2005

Proposed Callsign: RS0RS ?
Proposed Transmit Frequency: 145.990

This from Miles, WF1F:
At the present time there are tentative plans to have a Space Walk (EVA) taking place from ISS sometime around December 8, 2005. It is possible that during this Space Walk, the ISS crew may Hand launch the ARISS SuitSat project during that EVA mission. Again, all date are subject to last minute changes.
Please Keep monitoring the ARISS and AMSAT web pages for more updates.

The SuitSat project is a free floating Unmanned satellite that will be running on Batteries Only! The life span of the project will be limited to the power in the batteries. SuitSat may last as little as 1 week or as long as 6 weeks.
So it is very important for you to get your satellite monitoring station ready now. You should not wait for the Official activation date, because you may miss the opportunity to hear the new bird.

I will keep posting updated links for the SuitSat project as they become available.

This from Frank H. Bauer, KA3HDO:

Yes, we have set the SuitSat-1 downlink to be the same as the Packet uplink.
The ARISS/Human Spaceflight team have a very limited set of frequencies in the 2 meter OSCAR sub-band (145.80-146 MHz). 145.99 is one of them.

As Miles Mann, WF1F, described, we will be reconfiguring the Kenwood D700E from packet mode. Our tentative plan is to set the D700 into a repeater mode with that will enable the ISS radio to repeat the Suitsat audio on 70 cm, specifically, 437.80 MHz.

All hams are requested to refrain from uplinking packet (or voice) on 145.99

during Suitsat operations. This will allow you and your local neighbors to better hear the SuitSat downlink. SuitSat will only be operational for a few days.....we all would like to get the most of its operations. So please due your best to abide by this plan.

We will continue to provide late-breaking information on SuitSat plans on the following web sites. Please check them often. And get your stations ready to copy the audio, voice telemetry, and SSTV picture.

http://www.amsat.org

http://www.rac.ca/ariss

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
        888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

HAMSAT VO-52 Activates Dutch Transponder

AMSAT News Service Bulletin 324.01
From AMSAT HQ SILVER SPRING, MD.
November 20, 2005
To All RADIO AMATEURS
BID: $ANS-324.01

Mani, VU2WMY, Secretary & Station-In-Charge of the Upagrah Amateur Radio Club at the ISRO Satellite Centre in Bangalore, India reports the command to switch on the Dutch transponder aboard HAMSAT VO-52 was successfully issued from India's ISRO Tracking Ranging and Command Network.

The Dutch transponder, designed and built by William, PE1RAH, began operation at 1034 hours on November 17 Indian Standard Time.

William said, "Tuning on 145.860 MHz I could clearly hear the CW beacon with the message I programmed in it. The CW beacon and transponder survived 6 months in space without any problems. I hope you all have lot of fun with it and can use it for your experiments and QSOs."

The first stations to operate via VO-52's Dutch transponder were Pop, VU2POP, Secretary Amsat India; Guru, VU2GUR; and Ramesh, VU2RMS; and Mani, VU2WMY. Reception reports have begun to be received from radio amateurs around the world as HAMSAT VO-52 comes in range.

Mani continued, "The second pass over India was also monitored with initial measurements and test results indicating normal performance. We look forward to feedback from the hams all over the world. Please post your reports on the Amsat-India web site http://www.amsat.in/hamsatreports.htm."

Frequencies used on HAMSAT's Dutch Transponder

Type: Linear Inverting transponder
Uplink frequency: 435.220 - 435.280 MHz,
Downlink frequency: 145.870 - 145.930 Mhz
Beacon: CW at 145.860 MHz

William will send a special QSL card for those who have a QSO with him via the Dutch transponder. This card was designed by Tasos, SV8YM, and features exclusive photos and information about HAMSAT.

[ANS thanks Mani, VU2WMY; Pop, VU2POP; AMSAT-India, and William, PE1RAH for the above information]

SB SAT @ AMSAT $ANS-324.02

AATiS Team Announces RUBIN-5/SAFIR-S Activation

AMSAT News Service Bulletin 324.02
From AMSAT HQ SILVER SPRING, MD.
November 20, 2005
To All RADIO AMATEURS
BID: $ANS-324.02

There are 2 amateur radio equipped payloads that are remain attached to the launch adapter that carried the SSETI mission into space. These are the Mozhayetz-5 (RS-25) and RUBIN-5/SAFIR-S payloads.

Unfortunately due to the failed release of RS-25, the power budget of a partially covered solar cell for RUBIN-5/SAFIR-S is low. The SAFIR S-band beacon is now enabled with a carrier frequency of 2401.900 MHz. The downlink-only beacon consists of a 10-15 second FM speech message followed by several transmissions of 9k6 FSK AX.25 packets.

Currently the SAFIR-S beacon is activated with the following schedule: minutes 10-20, minutes 30-40 and minutes 50-60. SAFIR-S is de-powered during the remaining hourly intervals.

Details regarding the status and a technical description are available on the AATiS-Sat Homepage: http://amend.gmxhome.de. This site is in German language for the moment, but it is planned to add a description in English. The satellite news on this site is bilingual.

Please e-mail reception reports DG6BCE@aatis.de

SSETI Express - Statement by Sir Martin Sweeting G3YJO

AMSAT News Service Bulletin 324.04
From AMSAT HQ SILVER SPRING, MD.
November 20, 2005
To All RADIO AMATEURS
BID: $ANS-324.04

Professor Sir Martin Sweeting G3YJO, CEO of SSTL (Surrey Satellite Technology Ltd) and Chair of AMSAT-UK has issued the following statement regarding SSETI Express.

I am very sorry to learn of the problems with the SSETI power system and I hope that it may yet recover at some time in the future so that we will have the satisfaction of seeing all the hard work operational in orbit.

Nevertheless, a major element of the project has been successful - that is the training and inspiration of the students involved - and at least signals were heard from SSETI in orbit during the first day!

It was very apparent from the European Space Agency (ESA) and SSETI students that I met that they all greatly appreciated and admired the specialist experience and maturity that the AMSAT-UK members involved brought to the project - this has done much to raise the credibility of AMSAT within the ESA community. Well done!

We at Surrey have been through difficult times with our early spacecraft and so can empathise with the disappointment - however, I also urge patience and perseverance as we recovered two of our satellites after several months hard work when everyone else had given them up as lost!

SSTL is also pleased to have been able to assist the SSETI project by arranging the launch on Cosmos that successfully placed the satellite in orbit.

Best 73,
Martin G3YJO

Arianespace Celebrates Heavy Lifter Launch Success

AMSAT News Service Bulletin 324.07
From AMSAT HQ SILVER SPRING, MD.
November 20, 2005
To All RADIO AMATEURS
BID: $ANS-324.07

An Ariane-5 ECA heavy lift launcher blasted off from Kourou, French Guiana on Wednesday, November 16 carrying a world record 8,000 kg of telecommunications satellites. The payload consisted of DirecTV's Spaceway 2 satellite weighing 6,000 kg at lift-off, and PT TelKom Indonesia's Telcom 2 satellite weighing nearly 2,000 kg at liftoff. The combined weight of the two satellites on this launch was more than 8,000 kg, or 17,500 pounds.

Ariane-5 ECA rockets are designed to carry a payload of almost 10,000 kg (22,000 pounds). Arianespace has launched a total 11 satellites so far in 2005.

SB SAT @ AMSAT $ANS-324.08
SuitSat Update

AMSAT News Service Bulletin 324.08
From AMSAT HQ SILVER SPRING, MD.
November 20, 2005
To All RADIO AMATEURS
BID: $ANS-324.08

Frank Bauer, KA3HDO, AMSAT V.P. for Human Spaceflight Programs, and ARISS International Chairman provided additional information

about SuitSat which is expected to be released from the ISS in
the December 7-8 timeframe.

SuitSat will transmit a direct downlink only signal on 145.99 MHz.
There is a tentative plan to reconfigure the Kenwood D700E radio
aboard ISS from packet mode into cross-band repeater mode to repeat
the Suitsat audio on 437.80 MHz.

All hams are requested to refrain from uplinking packet (or voice) on
145.99 during Suitsat operations. This will allow you and your local
neighbors to better hear the SuitSat downlink. SuitSat will only be
operational for a few days so we all would like to get the most of its
operations. So please do your best to abide by this plan.

We will continue to provide late-breaking information on SuitSat plans on
the following web sites. Please check them often. And get your stations
ready to copy the audio, voice telemetry, and SSTV picture.
http://www.amsat.org
http://www.rac.ca/ariss

[ANS thanks Frank, KA3HDO for the above information.]

AMSAT NEWS SERVICE
ANS-331

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:

ans-editor@amsat.org

In this edition:
* PCSat (NO-44) Operational
* PCSat2 Awaiting Improved Sun Angles
* SuitSat Deployment Delay
* SA AMSAT Satellite Conference 2006 - Call For Papers
* POSAT Update
* OSCAR 11 Report - 21 November 2005
* AMSAT Awards
* ARISS Status - 21 November 2005

SB SAT @ AMSAT $ANS-331.01
PCSat (NO-44) Operational

AMSAT News Service Bulletin 331.01
From AMSAT HQ SILVER SPRING, MD.
November 27, 2005
To All RADIO AMATEURS
BID: $ANS-331.01

PCsat (NO-44) Will be OPS NORMAL for 2 weeks starting 25 November 2005. PCsat was last operating OPS-NORMAL back in Jan/Feb 2005 for about a month until it returned to negative-power-budget mode on 16 Feb 2005. PCsat enters full sun every 2 months or so, but the energy budget is only high enough during the winter months for full receeovery due to the better sun angles then on its +Z solar panel.

PCsat is using the same path as ARISS for convenience:
UNPROTO APRS VIA ARISS.

APRS mobiles in the USA will also see occasional packets from the Side B downlink on the USA APRS frequency of 144.39.

Please remember the rules for PCsat as published in the User Service Agreement, and that is "no unattended beacons via PCsat" to conserve power for those people trying live contacts.

[ANS thanks Bob WB4APR for the above information]

SB SAT @ AMSAT $ANS-331.02
PCSat2 Awaiting Improved Sun Angles

AMSAT News Service Bulletin 331.02
From AMSAT HQ SILVER SPRING, MD.
November 27, 2005

To All RADIO AMATEURS
BID: $ANS-331.02

PCSAT2 shut down due to low voltage sometime after 1855z on 23 Nov due to high beta angle. Nothing was heard on the 2032z pass.

PCSAT2 is attached to the outside of ISS and only gets sun when ISS is maintaining an attitude with good sun angle on our location. The worst angle is on Saturday, 26 November 2005. Recovery is not expected until later next week when sun angles begin to improve.Atthattimeitis hoped that joint ops with PCsat (NO-44) will be possible.

Last telemetry was showing the 16 volt Lithimu-Ion Battery down to 11.6 volts. Load current was the usual 313 mA and Solar current was 377 mA near local noon. Even with load sheding, and re-charge, the PCSat2 receivers will be on and the only power savings due to the shut-down will be the 60 mA of the TNC's. This is only 20% of the nominal load current and is insufficient to gain much ground until the entire system returns to better sun angles sometime after 1 Dec.

[ANS thanks Bob, WB4APR, for the above information]

SA AMSAT Satellite Conference 2006 - Call For Papers

AMSAT News Service Bulletin 331.04
 From AMSAT HQ SILVER SPRING, MD.
November 27, 2005
To All RADIO AMATEURS
BID: $ANS-331.04

CALL FOR PAPERS FOR THE SA AMSAT SATELLITE CONFERENCE 2006
(SA AMSATCON2006)

The Southern Africa Amateur Radio Satellite Association (SA AMSAT) will be holding its annual satellite conference on 25 March 2006 at the University of KwaZulu-Natal. The key note speaker will be Prof Justin Jonas who will deliver a presentation on the SKA (Square kilometre Array) project. Prof Takawira, head of the Department of Electrical and Electronic Engineering will open the conference.

SA AMSAT is calling for proposals for papers on subjects covering the various aspects of satellite and weak signal communication including equipment and antenna design and construction.

Prospective authors should send a brief synopsis of their proposed paper to saamsat@intekom.co.za for consideration by the conference committee. The deadline is 30 January 2006. Proposals and submission may also be mailed to SA AMSAT, PO Box 90438, Garsfontein 0042.

Authors will be advised by 6 February 2006 of acceptance of their papers. Final papers in Microsoft word format are required by 10 March 2006.

The morning sessions will be focussing on technologies while the afternoon sessions will include practical aspects of satellite communication for both experienced satellite enthusiast as well as newcomers.

Attendance to the conference is open to all satellite enthusiasts. Details of registration and fees will be announced during January 2006.

[ANS thanks JoAnne, WB9JEJ, for the above information]

POSAT Update

AMSAT News Service Bulletin 331.05
From AMSAT HQ SILVER SPRING, MD.
November 27, 2005
To All RADIO AMATEURS
BID: $ANS-331.05

During the AMSAT-UK Colloquium in late July it was announced that it was expected that the POSAT satellite would be reconfigured for amateur radio use.

We are pleased to confirm that this is still the plan but it is taking a little longer than expected to make the necessary non-technical arrangements.

The final operating configurations will take into account the various options discussed on the AMSAT-BB within the constraints imposed by the operating system on board and by the load on the command station.

As soon as we have more detailed information we will make a further announcement

SB SAT @ AMSAT $ANS-331.06
OSCAR 11 Report - 21 November 2005

AMSAT News Service Bulletin 331.06
From AMSAT HQ SILVER SPRING, MD.
November 27, 2005
To All RADIO AMATEURS
BID: $ANS-331.06

During the period 20 October to 21 November 2005 the VHF beacon on 145.826 MHz. resumed transmissions on 21 October, and continued until 30 October. Transmissions then resumed, as expected, on 10 November. However, the beacon stopped transmitting prematurely, some time between 14 and 16 November. If the watchdog resets as expected, then the beacon should restart around 06 December.

Signals have been very variable during this period. Sometimes received at good strength, at other times they were inaudible , even with the BFO switched ON (ie. in CW mode).

The on-board clock continues to show a very large error. Currently it is 19.9 days slow.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working.

The eclipses have now ended, and the satellite should be in continuous sunlight for the remainder of this year, and next year until early May. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures. Power supply problems can be caused by poor earth pointing attitude, ie the sunlight illuminating the ends of the satellite, instead of the solar arrays.

The watchdog timer appears to be operating on the 20 day cycle, ie. approximately ten days ON followed by 10 days OFF. It appears to be unaffected by problems of the on-board clock. However, poor solar attitude, and battery problems, may be combining to produce a low 14 volt line supply. This appears to be causing the beacon to switch OFF prematurely, and resets the watchdog timer cycle. It seems very likely that the battery is now unable to retain its charge, due to having endured around 100,000 partial charge/discharge cycles, always a problem with NiCad cells. When analogue telemetry was transmitted, it showed an unexplained current drain from the 14 volt line. This just adds to the present problems.

The Beacon frequencies are -
VHF 145.826 MHz. AFSK FM ASCII Telemetry
UHF 435.025 MHz. OFF
S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is www.users.zetnet.co.uk/clivew/

If you place this bulletin on a terrestrial packet network, please use the bulletin identifier $BID:U2RPT115.CWV, to prevent duplication.

AMSAT News Service Bulletin 331.08
From AMSAT HQ SILVER SPRING, MD.
November 27, 2005
To All RADIO AMATEURS
BID: $ANS-331.08

1. Hermann Middle School Contact Successful

On Wednesday, 16 November 2005, Hermann Middle School, in Hermann, Missouri, contacted the ISS via ham radio. The school library was standing room only, as seven students asked questions of Bill McArthur, KC5ACR. The audio was distributed over the PA system to the rest of the school. MSNBC carried the event live through the school's Hermann Bearcat Amateur Radio Club webcam. Two television stations, channel 5, St. Louis and channel 13, Jefferson City, covered the event and ran video clips in their news casts. The students, volunteers and teachers who participated will receive DVDs as a remembrance of the event. The Hermann Middle School radio contact coordinator reported, "This was a wonderful thing that happened to our rural school district. They are all smiles right now."

2. Takatsuki Education Center Contact Successful

On Thursday, 17 November 2005, Takatsuki Education Center in Takatsuki, Osaka, Japan, experienced a successful contact with the ISS. Ten sixth graders from Hiyoshidai Elementary School posed twenty questions to Bill McArthur, KC5ACR, as an audience of approximately 400 students, parents and others gathered to watch the event. Two television stations, including NHK (Japan Broadcasting Corporation), three newspapers, and other media covered the contact. The contact audio is available at:
http://jk1zrw.dyndns.org/takatsuki.html.en

For the video, see:
http://www.city.takatsuki.osaka.jp/multimedia/media/ariss-hiyosidai.asf

3. ARRL Article on Negri and Furtherwick School Contacts

ARRL ran an article covering the Instituto Comprensivo Francesco Negri and Furtherwick Park School contacts. "Students in Italy, England Entertained, Educated via Ham Radio" may be found at:
http://www.arrl.org/news/stories/2005/11/16/1/?nc=1

4.Italian School Contact Video

On Wednesday, November 9, students from Instituto Comprensivo Francesco Negri spoke with astronaut Bill McArthur via amateur radio. Radio operator Claudio Ariotti, IK1SLD, posted a video clip and photos of the event on the following website:
http://scuola.spaceonline.tv/

5. Furtherwick Park School Contact

On Wednesday, November 9, Furtherwick Park School successfully contacted the ISS. The BBC covered the event in an article, "Pupils link up with International Space Station." See:
http://www.bbc.co.uk/essex/content/articles/2005/11/11/space_station_feature.shtml

ARISS member, Howard Long has made available a video of the contact.
See:
http://www.howardlong.com/images/Furtherwick.wmv

6. Russian EVA to Deploy SuitSat Postponed

SuitSat, a Russian spacesuit containing ham radio equipment and a CD of student artwork, was scheduled to be deployed during a Russian EVA on December 8. This EVA has been postponed and is not expected to take place until late January/early February 2006.

This unique satellite continues to receive news coverage, as Frank Bauer's SuitSat paper has been translated into French and posted on the AMSAT-France website. See: http://www.amsat-france.org/ariss

[ANS thanks Carol, KB3LKI for the above information]

This report is organized into 4 parts.
Part 1 - operational analog amateur satellites.
Part 2 - operational digital amateur satellites.
Part 3 - non - operational satellites
Part 4 - proposed satellites

SB SAT @ AMSAT <W8ISS $ANS-331.S1
WSR 331 Part 1 11/27/2005

AMSAT NEWS SERVICE BULLETIN 331.S1 FROM AMSAT HQ
SILVER SPRING, MD, November 27, 2005
TO ALL RADIO AMATEURS
BID: $ANS-331.S1

VO-52 HAMSAT
Catalog Number: 28650
Launch Date: May 05,2005

Status: Testing
Current Mode: U/V - Dutch Transponder

Proposed frequencies:

Indian Transponder:
Uplink : 435.220 MHz to 435.280 MHz LSB/CW
Downlink: 145.870 MHz to 145.930 MHz USB/CW
Beacom : 145.859330 MHZ CW

Dutch Transponder:
Uplink : 435.225MHz to 435.275MHz LSB/CW

Downlink: 145.875MHz to 145.925MHz USB/CW
Beacon : 145.860MHz 12WPM with CW message

This from William Leijenaar, PE1RAH:
Dear AMSATs,

I wish I had the same free time now as when I designed the HAMSAT and P3e transponder. Unfortunatly these times have been changed (for the moment) due to QRL things.

However, I often try to be QRV on the HAMSAT and check the signals from my transponder and read the messages on amsat-bb. I just read about the beacon "problem". The "problem" with the beacon is actually not a problem but it is known. The beacon signal is injected at the IF, and runs throught the transponder from the IF section, up converter, via the final PA to the antenna.

The changes you hear on the beacon frequency is caused by the amplitude limiters in the IF that are activated by a too strong uplink signal. These limiters are only for protection, to avoid that the IF and VHF amplifiers get overloaded and generate all kinds of unwanted signals at the output.

My transponder is straight forward to keep it physical small and cheap in cost (as I had no sponsors). Unlike most other transponders my transponder on HAMSAT has no AGC system. It gives always maximum gain with maximum sensitivity.
The main reason is that the AGC systems I had didn't fit in the small sized box. As an option I choose for limiters, and it worked great in tests.

Secondly, I tought limiters might be helpfull against aligators. To deal with too strong signals most transponder have an AGC to lower the RX gain, and actually be helpfull to the alligators. With the limiters their SSB signal will get distorted and they might lower their powers to have better audio quality.

The change in beacon sound is an indication for too much uplink powers and will be heared mainly in areas where higher powers are available on the uplink, like US, Europe, Japan...

Its funny to know that nobody here has discovered that the bandpass is shifted some down in frequency... There is no technical failure, the reason is known here... No panic please :o)

Please keep in mind that this transponder is my privat work and privat money.

Frankly speaking this is my privat transponder I "give" to the amateur world.
I was one of those many poor students, and this was the best I could do with my resources I had available at that time... The whole thing is just 16cm x 10cm x 3cm !! even smaller than the professional Indian transponder :o)

I hope you all enjoy my transponder even when it is not perfect.
[11272005]

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink:    145.850 MHz (67.0 Hz PL tone) (See below for operating
          procedures)
Downlink:  436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that SO-50 has
shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of  74.4 Hz. The
order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater
on
   and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10
   minute timer.
[09122004]
=====
FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink:     145.90 to 146.00 MHz CW/LSB
Downlink:   435.80 to 435.90 MHz CW/USB
Beacon:     435.795 MHz

Digital Mode JD
Uplink:     145.850 145.870 145.910 MHz FM
Downlink:   435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign:   8J1JCS
```

Digitalker: 435.910 MHz

John, N4QWL reports on July 16th, 2005:
Last evening I had a AOS to LOS qso with WI2W. FO-29 came up at 01:17z here in
FM07 and I found WI2W and we chatted until 01:33z. The satellite was at 2
degrees elevation when I finally heard him start to crackle a bit. What a
great QSO! To think that I watched this bird launch back in 1996 and it is
still working so well is a real thrill. I believe I still have the video. I
might just look for it and watch it again. Boy do I love this satellite
stuff!
Look for you all up there.

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will
automatically analyze all digital telemetry from the satellite (such as
current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[ANS-WSR wishes to thanks John, N4QWL for this week's report]
[11132005]

=====

AO-27 AMRAD
Catalog number: 22825
Launched: September 26, 1993

Status: Operational

Uplink: 145.850 MHz FM
Downlink: 436.795 MHz FM

The latest information on AO-27 from control operator Michael Wyrick, N3UC
(former N4USI), can be found at:
http://www.ao27.org

An AO-27 question-and-answer page is available on the AMSAT-NA web site, with
updates by Ray, W2RS. The URL is:
http://www.amsat.org/amsat/intro/ao27faq.html

[ANS-WSR thanks John, K6YK, for this week's AO-27 report]

=====

AO-7 AMSAT OSCAR 7
Catalog number: 07530
Launch Date: November 15, 1974

Status: Semi-operational in sunlight.
Return to active status: June 21,2002

Uplink: 145.850 to 145.950 MHz CW/USB Mode A
            432.125 to 432.175 MHz CW/LSB Mode B

Downlink: 29.400 to 29.500 MHz CW/USB Mode A
            145.975 to 145.925 MHz CW/USB Mode B
Beacon: 29.502 MHz, 145.972 MHz, 435.1 MHz, 2304.1 MHz

Emily, W0EEC has created a website to allow the users of AO-7 to record contacts, observations and use of the satellite more effectively at:
http://www.emilyshouse.com/experthams/ao7/main.php
This includes the ability to log contacts.

Tim, K3TZ has written a program to decode AO-07 telemetry. The program can be downloaded at:
http://www.qsl.net/k3tz/files/K3TZ_AO-07_Telemetry_Decoder_0.5.zip

For more AO-7 info:
http://www.amsat.org/amsat/sats/n7hpr/ao7.html

NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Operational

General Usage Uplink/Downlink:145.827 MHz 1200 Baud
Special Usage Downlink: 144.390 Mhz 1200 Baud

PCSat is a 1200-baud APRS digipeater designed for use by stations using hand-held or mobile transceivers. Downlinks feed a central web site at: http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy under the guidance of Bob Bruninga, WB4APR.
[11272005]
=====
CUTE-1
Catalog number: 27844
Launched: June 30,2003

Status: Operational

Uplink: ?
Downlink: 436.8375 CW
              437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ?)
Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as OPERATIONAL?
Indeed it is very operational as a CUBESAT sending CW telemetry on 436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at 14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz. Initial orbital parameters were period 101.4 min, apogee 831 km, perigee 819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

[ANS WSR wishes to thank Cliff, K7RR, for this week's information]

and telemetry samples can be found at:
http://www.telecable.es/personales/ea1bcu
[05092004]
=====
UO-11 OSCAR-11
Catalog number: 14781
Launched: March 1, 1984

Status: Semi-operational?

Telemetry Downlink: 145.826 MHz. FM (1200-baud AFSK).
                     approx. 10 days ON, 10 days OFF
Mode-S Beacon:       2401.500 MHz. ... OFF
UHFBeacon:           435.025 MHz. ...  OFF
```

During the period 24 September to 25 October 2005 the VHF beacon on 145.826MHz resumed transmissions, as expected, on 30 September, sometime between 06:05 and 06:42 UTC passes. Reasonable signals were also captured on the 17:44 pass, later that day. However by the 16:49 UTC pass on 02 October, the beacon had switched OFF. Transmissions resumed on 21 October, and should continue until around 31 October.

The on-board clock continues to show a very large error. Currently it is 19.2394 days slow, having lost six hours while the beacon was last OFF, ie. between 02 October and 21 October. When the beacon is ON, the clock is stable to within a few seconds.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working.

The eclipses have now ended, and the satellite should be in continuous sunlight for the remainder of this year, and well into next year. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures.

The watchdog timer appears to be operating on the 20 day cycle, ie. approximately ten days ON followed by 10 days OFF. It appears to be uneffected by problems of the on-board clock. However, poor solar attitude, and battery problems, may be combining to produce a low line voltage. This causes the beacon to switch OFF premeaturely, and resets the watchdog timer cycle.

The Beacon frequencies are -
VHF 145.826 MHz. AFSK FM ASCII Telemetry
UHF 435.025 MHz. OFF
S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains
an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is:

======
POSAT-1 PO-28
Catalog Number: 22829
Launched : September 25, 1993

Status: Operational - Not open for Amatuer use

Downlink: 435.250 MHz
435.275 MHz

Uplink: 145.925 MHz
145.975 MHz

Broadcast callsign: POSAT1-11
BBS callsign: POSAT1-12

PO-28 (POSAT-1), Portugal's first satellite, launched 12 years ago,will be turned over to Amateur Radio use in the very near future. That was the word July 30 from AMSAT-UK Secretary Jim Heck, G3WGM, during the AMSAT-UK International Space Colloquium in Guildford, England.

Launched September 25, 1993, the satellite operated as a packet store-and-forward BBS (9600 baud FM FSK) on Amateur Radio frequencies for several weeks in early 1994. Over the years, PO-28's primary usage has been commercial, although plans have called for eventually shifting its operation to ham radio use. G3WGM reports that following lengthy negotiations it has been agreed that the satellite can be switched permanently to amateur frequencies. The changeover is expected to take a couple of weeks.

The Portuguese satellite was built at the University of Surrey as part of a collaborative satellite technology program that involved industry and academe. Uplink frequencies will be 145.925 and 145.975 MHz. Downlink frequencies will be 435.250 and 435.275 MHz. More information on PO-28 is on the AMSAT Web site

http://www.amsat.org/amsat/sats/n7hpr/po28.html.

Uplink Frequencies: 145.925 and 145.975 MHz
Downlink Frequencies: 435.250 and 435.275 MHz

Orbit: 822 x 800 km, 98.6 deg inclined, sun-synchronous.

Transponder capabilities include FM repeater and 38k4 data. If you want to hear how loud this satellite is, listen on 429.950 until the change back to amateur radio service.

Keplerian elements for PO-28 are currently contained in the AMSAT keps bulletins and at Celestrak in amateur.txt using the name "POSAT". Users of Space Track should query the NORAD Satellite ID number 22829. The name listed by Space Track is "EYESAT A".

More information of POSAT-1 can be found at:
http://www.ee.surrey.ac.uk/SSC/CSER/UOSAT/missions/posat1.html
http://www.amsat.org/amsat/sats/n7hpr/po28.html
[ANS-WSR wishes to thank Duane Naugle, KO6BT, for this week's update.]

=====

AO-10 OSCAR 10
Catalog number: 14129
Launched: June 16, 1983

Status: Non-operational

Uplink: 435.030 to 435.180 MHz CW/LSB
Downlink: 145.975 to 145.825 MHz CW/USB
Beacon: 145.810 MHz (unmodulated carrier)

AO-10 has been locked into a Mode-B, 70-cm uplink and 2-meter downlink for several years.

W4SM has more information about the satellite at the following URL:
http://www.cstone.net/~w4sm/AO-10.html
[05092004]

=====

IO-26 ITAMSAT
Catalog number: 22826
Launch Date: September 26, 1993

Status: Non-operational

Uplink: 145.875 145.900 145.925 145.950 MHz FM (1200-baud)
Downlink: 435.812 MHz SSB
Broadcast Callsign: ITMSAT-11
BBS: ITMSAT-12

Alberto E. Zagni - I2KBD reports on 02/13/05
The spacecraft is in MBL (safe mode) and is trasmitting just 6 channels of telemetry. Temperatures and voltage are nominal, but there seems to be a problem with the onboard receiver, refusing to accept commands. The spacecraft was launched in 1993, thus nearing 12 years in orbit...

Best regards
Alberto E. Zagni - I2KBD
ITAMSAT Mission Director

More information of IO-26 can be found at:

PO-34 PANSAT
Catalog number: 25520
Launched: October 30, 1998

Status: Telemetry downloads only

Uplink/downlink frequency (listed on the PanSat web site) 436.500 MHz

The satellite is not available for general uplink transmissions.

The Naval Postgraduate School developed PanSat. At the time of launch, PanSat spread-spectrum digital transponders were to be available to Amateur Radio operators along with software to utilize this technology.

The satellite is still operating, however, the spread spectrum packet radio portion never took place. The spacecraft is now beyond it's initial 2-year mission life, but telemetry records are still being downloaded.

For more information, visit the official PanSat web site at:
http://www.sp.nps.navy.mil/pansat/
[05092004]
=====
SO-33 SEDSAT-1
Catalog number: 25509
Launched: October 24, 1998

Status: Semi-operational

Downlink: 437.910 MHz FM (9600-baud FSK)

The satellite is not currently available for uplink transmissions and
the image and transponder recovery efforts have been unsuccessful.

For more information on SedSat-1 visit the satellite web site:
http://seds.uah.edu/projects/sedsat/sedsat.htm

[ANS-WSR has no further information]

TiungSat-1 is Malaysia's first micro-satellite and in addition to commercial land and weather imaging payloads offers FM and FSK Amateur Radio communication.

TiungSat-1, named after the mynah bird of Malaysia, was developed as a collaborative effort between the Malaysian government and Surrey Satellite Technology Ltd.
[11202005]

=====

AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio and telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at: http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:

http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
        888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the
memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen,
G0FCL and John Branegan GM4IHJ.

SB SAT @ AMSAT $ANS-338.01
PCSAT1 and PCSAT2 Two-Hop Operations

AMSAT News Service Bulletin 338.01
From AMSAT HQ SILVER SPRING, MD.
December 4, 2005
To All RADIO AMATEURS
BID: $ANS-338.01

Bob Bruninga, WB4APR, writing on behalf of the US Naval Academy Satellite Laboratory, reported this week that the original PCSat (PCSAT1), which is operational only when its solar cells are in sunlight, has had as many as 45 users in a single day and 72 different callsigns over a period of two days. This is because PCSAT1's orbit has taken the satellite into a 12 day full-sun period.

Additionally, PCSAT2, mounted aboard an external strut on the International Space Station will be activated as its solar cells will be once again facing the sun as the ISS makes orbital attitude adjustments. The PCSAT2 user digipeater with its 145.825 uplink and 435.275 downlink will be back on-the-air.

With PCSAT1 and PCSAT2 both active, the control team at the US Naval Academy will make a few changes to improve the chances of mulitple satellite hops of digipeated signals:

1) We will add SGATE as an alias to PCSAT2 so that ANY over the horizon PCSAT1 originated packets that are heard by PCSAT2 will be relayed since these packets already contain the SGATE digipeating path.

2) Stations sending up through PCSAT1 as a first hop may get a second hop through PCSAT2 if they use any dual hop path (ARISS, ARISS; or WIDE2-2; or PCSAT2,PCSAT1; etc) The second hop will only be heard on the PCSAT2 435.275 downlink.

3) As of December 3, the PCSAT2 435.275 downlink was switched down to 145.825 so that PCSAT2 and PCSAT1 are identical systems both with uplinks and downlinks on 145.825 acting as a 2-hop constellation both on 145.825. Both will be supporting the normal

APRS aliases of WIDE, or ARISS, or APRSAT or WIDE2-2 so that you can digipeat through either one or both.

4) The PCSAT2 dowlink will shift back to 435.275 on 7 Dec to avoid any possible interference with the next school contact with Sanderson, TX, on 8 Dec at 1730z.

Bob reminds PCSat users, "Of course, the MORE that try the FEWER will be the success rate. So if you really don't know what you are doing, PLEASE do not transmit and just watch. YOUR station may be the one that SEES the dual hop, so that should be a good reward too. Make your packet as SHORT as possible and use the shortest TXD for your TNC. The PCSATs should respond with TXD's as low as 10 which is 100 milliseconds in real-time. Also, transmit occassionally, NOT repeatedly, maybe once a minute or so.

Bob summarized, "When PCSAT1 returns to eclipses, we are usually lucky enough to keep her from resetting for a few more weeks and at least daylight operations can continue normally. But once it resets, either due to peak user load or a Single Event Upset from radiation, then we lose her again until the next full sun period in the first week of March 2006."

For additional details please see the PCSAT2 web page at:
http://www.ew.usna.edu/~bruninga/pcsat2.html

ISS Active on Casual Contacts

AMSAT News Service Bulletin 338.02
From AMSAT HQ SILVER SPRING, MD.
December 4, 2005
To All RADIO AMATEURS
BID: $ANS-338.02

International Space Station Commander, Astronaut Bill McArthur, KC5ACR, has been very active on the NA1SS amateur radio station aboard the ISS over the past several days. Since November 23, NA1SS has made over 50 contacts during brief operating opportunities. This past week, reports from Turkey, South Africa, South America and North America indicated NA1SS was calling CQ and making contacts.

For those who are still trying for a contact with the ISS, keep it up! For those of you lucky enough to work him, congratulations, but please give the others a little more time before making another contact since you have your QSO for Expedition 12. Lets see how many different stations he can work.

In addition, Bill has been doing 2 school contacts a week when his schedule allows. Not since Expedition 3 has a crew member done this on a regular basis. Please consider telling Bill, "Thank you" for all of us if you are fortunate enough to speak with NA1SS.

Worldwide packet uplink: 145.990 MHz FM
Region 1 voice uplink: 145.200 MHz FM
Region 2/3 voice uplink: 144.490 MHz FM
Worldwide downlink: 145.800 MHz FM

Repeater Uplink: 437.800 MHz FM
Repeater Downlink: 145.800 MHz FM
Doppler Shift is 10 KHz

Russian callsigns: RS0ISS, RZ3DZR
USA callsign: NA1SS
Packet station mailbox callsign: RS0ISS-11
Packet station keyboard callsign: RS0ISS-3
Digipeater callsign: ARISS

Straight Key Night on OSCAR 2006

AMSAT News Service Bulletin 338.03
From AMSAT HQ SILVER SPRING, MD.
December 4, 2005
To All RADIO AMATEURS
BID: $ANS-338.03

Once again AMSAT-NA is pleased to sponsor Straight Key Night on OSCAR for enjoyment by all radio amateurs.

OSCAR SKN 2006 will run for 24 hours, 0000-2400 UTC, on 1 January 2006. It's very simple: no rules, no scoring, and no need to send in a log. Just operate CW through any OSCAR satellite using a straight hand key, working as many other SKN participants as you can. Contacts via the moon (OSCAR Zero) count too.

As in past years, all participants are requested to nominate one of the operators they worked for "Best Fist" recognition. Your nominee need not have the best fist of those you heard, just of those you worked.

Please send all nominations to Ray Soifer via w2rs@arrl.net.

A list of those nominated will be published via the AMSAT News Service in early February, and in The AMSAT Journal.

[ANS thanks Ray, W2RS for the above information]

December 4, 2005
To All RADIO AMATEURS
BID: $ANS-338.05

1. ESA CERN Contact Successful
On Tuesday, November 22, eighteen students attending the ESA CERN Geneva Science Festival each asked a question of Bill McArthur, KC5ACR, via the telebridge station, NN1SS, in Greenbelt, Maryland. The event was attended by approximately 300 students and teachers, and at least one television station and a professional photographer. ESA will edit and post a video of the contact on its website in the near future.

The audio was fed to the Echolink AMSAT and EDU_NET conference room servers. Twenty-three connections were made, including three repeater nodes, from the following countries: Belgium, France, Germany, Israel, Morocco, Slovenia,
Switzerland, Thailand, the U.K. and the U.S.A.

A write up on the contact, "Students at 'Science on Stage' Festival Talk with ISS" is available on the ARISS Europe website. A link to the audio is included. See: http://www.ariss-eu.org/2005_11_24.htm

2. Central Park Middle School (NES) Contact Successful

On Wednesday, November 23, students from Central Park Middle School, (a NASA Explorer School), in Schenectady, New York, experienced a successful ARISS contact via the telebridge station, W6SRJ, in Santa Rosa, California. Astronaut Bill McArthur, KC5ACR, answered eighteen questions posed to him by thirteen Central Park students. Four television stations (6, 9, 13 and Fox 23) covered the event.

Echolink was used for this contact, where thirty-one connections were made from these countries: Bangladesh, Canada, France, Germany, Israel, Italy, Morocco, Oman, Romania, Russia, Sri Lanka, Taiwan, Thailand, the U.K., and the U.S.A.

Central Park posted a short story covering the contact on its website: "Central Park NASA Explorer School Call International Space Station, Again" may be found at:
http://www.schenectady.k12.ny.us/NASAExplorerSchool/spacestation112305.htm>

3. School Contacts This Week

Hawthorne Brook Middle School in Townsend, Massachusetts completed an ARISS contact on Tuesday, November 29. Ralph McCall School in Airdrie, Alberta, Canada completed an ARISS contact on Friday, December 2.

4. ARRL's New Book Mentions ISS Ham Contacts

ARRL has released, for sale, the first edition of a brand new book, "Basic Radio, Understanding the Key Building Blocks." The first page of one chapter features a large NASA photograph of astronaut Leroy Chiao, who earned ham radio call sign KE5BRW. The descriptor explains that Leroy set a record in space. His record was making 23 educational radio contacts with school students while leading Expedition 10 aboard the International Space Station.

Russian Space Agency Explains December Spacewalk Delay

AMSAT News Service Bulletin 338.06
From AMSAT HQ SILVER SPRING, MD.
December 4, 2005
To All RADIO AMATEURS
BID: $ANS-338.06

Russian space agency officials on Thursday, December 1, officially postponed the scheduled December 8 spacewalk by the Russian-American crew of the International Space Station. The December 8 spacewalk was originally scheduled to release SuitSat.

"The extravehicular activity of Valery Tokarev and William McArthur is not planned in December," Russia's Mission Control Center spokesman Valery Lyndin told the Itar-Tass news agency.

Mission Control Center Flight Director Vladimir Solovyov said the postponement was made possible since the spacemen would not have to prepare to receive a U.S. shuttle in March, as had been planned.

"It was initially planned that the American shuttle will come to the ISS in March, but now it is apparent that the 12th crew will not work with the shuttle," Solovyov told Itar-Tass.

NASA officials say the shuttle will not be launched earlier than May or July and set February 2, 2006 as the date for the postponed spacewalk. SuitSat is planned for deployment during this ISS spacewalk.

SB SAT @ AMSAT $ANS-338.07
St. Pierre and Miquelon Satellite DXpedition Report

AMSAT News Service Bulletin 338.07
From AMSAT HQ SILVER SPRING, MD.
December 4, 2005
To All RADIO AMATEURS
BID: $ANS-338.07

Ian, K8MM, reported DXpedition success from St. Pierre and Miquelon. "I had a great time, satellite operation was a blast, and I'm really glad that I took satellite gear with me. I was using my IC-910 with a pair of homebrew K5OE TPMII antennas along with Icom preamps.

Sunday night, the first night of the expedition, was spent at the Hotel Robert on St. Pierre. The local terrain was not favorable for satellites as I could only hear the overhead passes. The first bird I managed to get into was VO-52 and I called CQ for close to 10 minutes without making any contact as nobody was listening to the bird at that time. After a couple more fruitless tries on FO-29 and AO-51 I took the gear down and repacked it for the ferry trip to Miquelon in the morning.

Wednesday morning we awoke to gale force winds and rain. Having had my fill of HF pile-ups, I dug out the satellite antennas, put on my rain gear and braved the elements. You have not lived until you're tried putting up antennas in 70 mph winds! I had to wait until AO-51 was about 20 degrees in elevation before it wasn't blocked by the hotel or the mountain so I could hear it clearly. There weren't any qso's in progress so I gave a short CQ with my call and the bird quickly sprang to life with KB2YCC calling me. We exchanged info and he was the first satellite qso in the log for the dxpedition. More guys that were quickly worked on that pass were

VO1ONE, W8EH, AJ9K and N8BBQ in that order.

A look at the computer showed that FO-29 would be giving me an EU pass. I put my rain gear on and went back outside to point the antennas toward the East. It was directly over the sea for the portion of time EU and FP were in it's footprint. I worked F6BBJ, ON5NY on CW. On phone the satellite sounded pile-up on 20M! I managed work PH7PCF, 2E1EUB, and PH7AT. There are many more stations in the log than I can mention here.

Operating on the FM birds, KO4MA, K1PL, WI2W, KC8ZFN, W0SAT, and many other stations made it into the log.

If anyone is thinking of going to Miquelon there isn't a place that I can't recommend more highly than the Maxhotel and I left my TPMII satellite antennas there for anyone that wants to use them. The hotel is ham friendly and Christina, the manager at the hotel, went above and beyond the call of duty."

[ANS thanks Ian, K8MM for the above information]

VO-52 HAMSAT
Catalog Number: 28650
Launch Date: May 05,2005

Status: Testing
Current Mode: U/V - Dutch Transponder

Proposed frequencies:

Indian Transponder:
Uplink : 435.220 MHz to 435.280 MHz LSB/CW
Downlink: 145.870 MHz to 145.930 MHz USB/CW
Beacom : 145.859330 MHZ CW

Dutch Transponder:
Uplink : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacon : 145.860MHz 12WPM with CW message

This from William Leijenaar, PE1RAH:
Dear AMSATs,

I wish I had the same free time now as when I designed the HAMSAT and P3e transponder. Unfortunatly these times have been changed (for the moment) due to QRL things.

However, I often try to be QRV on the HAMSAT and check the signals from my transponder and read the messages on amsat-bb. I just read about the beacon "problem". The "problem" with the beacon is actually not a problem but it is known. The beacon signal is injected at the IF, and runs throught the transponder from the IF section, up converter, via the final PA to the antenna.

The changes you hear on the beacon frequency is caused by the amplitude limiters in the IF that are activated by a too strong uplink signal. These limiters are only for protection, to avoid that the IF and VHF amplifiers get overloaded and generate all kinds of unwanted signals at the output.

My transponder is straight forward to keep it physical small and cheap in cost (as I had no sponsors). Unlike most other transponders my transponder on HAMSAT has no AGC system. It gives always maximum gain with maximum sensitivity.
The main reason is that the AGC systems I had didn't fit in the small sized box. As an option I choose for limiters, and it worked great in tests.

Secondly, I tought limiters might be helpfull against aligators. To deal with too strong signals most transponder have an AGC to lower the RX gain, and actually be helpfull to the alligators. With the limiters their SSB signal will get distorted and they might lower their powers to have better audio quality.

The change in beacon sound is an indication for too much uplink powers and will be heared mainly in areas where higher powers are available on the uplink, like US, Europe, Japan...

Its funny to know that nobody here has discovered that the bandpass is shifted
some down in frequency... There is no technical failure, the reason is known
here... No panic please :o)

Please keep in mind that this transponder is my privat work and privat money.
Frankly speaking this is my privat transponder I "give" to the amateur world.
I was one of those many poor students, and this was the best I could do with
my resources I had available at that time... The whole thing is just 16cm x
10cm x 3cm !! even smaller than the professional Indian transponder :o)

I hope you all enjoy my transponder even when it is not perfect.
[11272005]

=====

SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that SO-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz. The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10 minute timer.

[09122004]

=====

FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM

Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

John, N4QWL reports on July 16th, 2005:
Last evening I had a AOS to LOS qso with WI2W. FO-29 came up at 01:17z here in
FM07 and I found WI2W and we chatted until 01:33z. The satellite was at 2 degrees elevation when I finally heard him start to crackle a bit. What a great QSO! To think that I watched this bird launch back in 1996 and it is still working so well is a real thrill. I believe I still have the video. I might just look for it and watch it again. Boy do I love this satellite stuff!
Look for you all up there.

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will automatically analyze all digital telemetry from the satellite (such as current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[ANS-WSR wishes to thanks John, N4QWL for this week's report]
[11132005]
=====
AO-27 AMRAD
Catalog number: 22825
Launched: September 26, 1993

Status: Operational

Uplink: 145.850 MHz FM
Downlink: 436.795 MHz FM

The latest information on AO-27 from control operator Michael Wyrick, N3UC (former N4USI), can be found at:
http://www.ao27.org

An AO-27 question-and-answer page is available on the AMSAT-NA web site, with
updates by Ray, W2RS. The URL is:
http://www.amsat.org/amsat/intro/ao27faq.html

[ANS-WSR thanks John, K6YK, for this week's AO-27 report]
[11132005]
=====
AO-7 AMSAT OSCAR 7
Catalog number: 07530
Launch Date: November 15, 1974

Status: Semi-operational in sunlight.
Return to active status: June 21,2002

Uplink: 145.850 to 145.950 MHz CW/USB Mode A
            432.125 to 432.175 MHz CW/LSB Mode B
Downlink: 29.400 to 29.500 MHz CW/USB Mode A
            145.975 to 145.925 MHz CW/USB Mode B
Beacon: 29.502 MHz, 145.972 MHz, 435.1 MHz, 2304.1 MHz

Emily, W0EEC has created a website to allow the users of AO-7 to record
contacts, observations and use of the satellite more effectively at:
http://www.emilyshouse.com/experthams/ao7/main.php
This includes the ability to log contacts.

Tim, K3TZ has written a program to decode AO-07 telemetry. The program can be downloaded at:
http://www.qsl.net/k3tz/files/K3TZ_AO-07_Telemetry_Decoder_0.5.zip

For more AO-7 info:

NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Operational

General Usage Uplink/Downlink:145.827 MHz 1200 Baud
Special Usage Downlink: 144.390 Mhz 1200 Baud

PCSat is a 1200-baud APRS digipeater designed for use by stations using hand-held or mobile transceivers. Downlinks feed a central web site at: http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy under the guidance of Bob Bruninga, WB4APR.
[11272005]
=====
CUTE-1
Catalog number: 27844
Launched: June 30,2003

Status: Operational

Uplink: ?
Downlink: 436.8375 CW
              437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ?)
Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as OPERATIONAL?
Indeed it is very operational as a CUBESAT sending CW telemetry on 436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at 14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz. Initial orbital parameters were period 101.4 min, apogee 831 km, perigee 819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

[ANS WSR wishes to thank Cliff, K7RR, for this week's information]

[05092004]

=====

UO-11 OSCAR-11
Catalog number: 14781
Launched: March 1, 1984

Status: Semi-operational?

Telemetry Downlink: 145.826 MHz. FM (1200-baud AFSK).
approx. 10 days ON, 10 days OFF
Mode-S Beacon: 2401.500 MHz. ... OFF
UHFBeacon: 435.025 MHz. ... OFF

During the period 24 September to 25 October 2005 the VHF beacon on 145.826MHz resumed transmissions, as expected, on 30 September, sometime between 06:05 and 06:42 UTC passes. Reasonable signals were also captured on the 17:44 pass, later that day. However by the 16:49 UTC pass on 02 October, the beacon had switched OFF. Transmissions resumed on 21 October, and should continue until around 31 October.

The on-board clock continues to show a very large error. Currently it is 19.2394 days slow, having lost six hours while the beacon was last OFF, ie. between 02 October and 21 October. When the beacon is ON, the clock is stable to within a few seconds.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working.

The eclipses have now ended, and the satellite should be in continuous sunlight for the remainder of this year, and well into next year. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures.

The watchdog timer appears to be operating on the 20 day cycle, ie. approximately ten days ON followed by 10 days OFF. It appears to be uneffected by problems of the on-board clock. However, poor solar attitude, and battery problems, may be combining to produce a low line voltage. This causes the beacon to switch OFF premeaturely, and resets the watchdog timer cycle.

The Beacon frequencies are -
VHF 145.826 MHz. AFSK FM ASCII Telemetry
UHF 435.025 MHz. OFF
S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains
an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is:

======
POSAT-1 PO-28
Catalog Number: 22829
Launched : September 25, 1993

Status: Operational - Not open for Amatuer use

Downlink: 435.250 MHz
          435.275 MHz

Uplink: 145.925 MHz

145.975 MHz

Broadcast callsign: POSAT1-11
BBS callsign: POSAT1-12

PO-28 (POSAT-1), Portugal's first satellite, launched 12 years ago,will be turned over to Amateur Radio use in the very near future. That was the word July 30 from AMSAT-UK Secretary Jim Heck, G3WGM, during the AMSAT-UK International Space Colloquium in Guildford, England.

Launched September 25, 1993, the satellite operated as a packet store-and-forward BBS (9600 baud FM FSK) on Amateur Radio frequencies for several weeks in early 1994. Over the years, PO-28's primary usage has been commercial, although plans have called for eventually shifting its operation to ham radio use. G3WGM reports that following lengthy negotiations it has been agreed thatthe satellite can be switched permanently to amateur frequencies. The change over is expected to take a couple of weeks.

The Portuguese satellite was built at the University of Surrey as part of a collaborative satellite technology program that involved industry and academe. Uplink frequencies will be 145.925 and 145.975 MHz. Downlink frequencies will be 435.250 and 435.275 MHz. More information on PO-28 is on the AMSAT Web site

http://www.amsat.org/amsat/sats/n7hpr/po28.html.

Uplink Frequencies: 145.925 and 145.975 MHz
Downlink Frequencies: 435.250 and 435.275 MHz

Orbit: 822 x 800 km, 98.6 deg inclined, sun-synchronous.

Transponder capabilities include FM repeater and 38k4 data. If you want to hear how loud this satellite is, listen on 429.950 until the change back to amateur radio service.

Keplerian elements for PO-28 are currently contained in the AMSAT keps bulletins and at Celestrak in amateur.txt using the name "POSAT". Users of Space Track should query the NORAD Satellite ID number 22829. The name listed by Space Track is "EYESAT A".

More information of POSAT-1 can be found at:
http://www.ee.surrey.ac.uk/SSC/CSER/UOSAT/missions/posat1.html
http://www.amsat.org/amsat/sats/n7hpr/po28.html
[ANS-WSR wishes to thank Duane Naugle, KO6BT, for this week's update.]

IO-26 ITAMSAT
Catalog number: 22826
Launch Date: September 26, 1993

Status: Non-operational

Uplink:             145.875 145.900 145.925 145.950 MHz FM (1200-baud)
Downlink:           435.812 MHz SSB
Broadcast Callsign: ITMSAT-11
BBS:                ITMSAT-12

Alberto E. Zagni - I2KBD reports on 02/13/05
The spacecraft is in MBL (safe mode) and is trasmitting just 6 channels
of telemetry. Temperatures and voltage are nominal, but there seems to
be a problem with the onboard receiver, refusing to accept commands.
The spacecraft was launched in 1993, thus nearing 12 years in orbit...

Best regards
Alberto E. Zagni - I2KBD
ITAMSAT Mission Director

TiungSat-1 is Malaysia's first micro-satellite and in addition to commercial land and weather imaging payloads offers FM and FSK Amateur Radio communication.

TiungSat-1, named after the mynah bird of Malaysia, was developed as a collaborative effort between the Malaysian government and Surrey Satellite Technology Ltd.
[11202005]
=====
AO-49 AATiS OSCAR-49 (SAFIR-M)

Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio and telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at:
http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
        888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James K. Darrow, KB9MMC.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:
ans-editor{at}amsat.org

I have the following for sale, all equipment is working.

ICom IC910H with 1.2gig module
2 - 13 element VHF beams
2 - 26 element UHF beams
1 - 29 element UHF beam
1 - 2 way VHF splitter
1 - 2 way UHF splitter
1 - NEW 2.4gig DEM (Down East Microwave) down converter

1 - NEW Yeasu elevation rotor and controller
1 - Hygain Ham IV rotor with controller

Anyone interested please contact me at VE3WDW@rac.ca I am located in Ontario just outside Toronto.

I also have a 60 foot commercial grade tower (weighs about 600 pounds) and a heavy duty 25 foot mast (2.5 inches .25 wall schedule 80, weighs about 175 lbs). Tower and pole are on the ground.

Thanks

VE3WDW

Hello, where can i find informations about PROCO linear amplifiers for 1296 MHz band?

I've tried with Google, but i found almost nothing...

Thank you,
73 de Riccardo IK5WQO

* Straight Key Night on OSCAR 2006
* PCSAT2 Operations Guidance II
* ARISS Status December 5, 2005
* New Items at the AMSAT Online Store
* KO4MA Announces Possible Satellite Operation from KG4
* Houston AMSAT Net Moves Satellites
* N5AFV Announces FM Satellite DXpedition

SB SAT @ AMSAT $ANS-345.01
AMSAT President's Letter for December 2005

AMSAT News Service Bulletin 345.01
From AMSAT HQ SILVER SPRING, MD.
December 11, 2005
To All RADIO AMATEURS
BID: $ANS-345.01

Fellow AMSAT Members,

I am quite pleased as AMSAT's Executive Vice President to have the opportunity to fill in on this month's President's Letter while Rick, Barry and Gunther are hard at work on various fundraising activities for AMSAT.

It is a very exciting time to be a member and supporter of AMSAT. One part of AMSAT's Vision is a constellation of High Earth Orbit (HEO) satellites. To accomplish this, it was recognized that the old method of working on single satellites in a serial fashion would not work and that several satellites would need to be constructed in parallel. That is exactly what is now beginning to happen with AMSAT-DL's P3E and AMSAT-NA's Eagle projects.

Over the recent Thanksgiving holiday weekend, AMSAT President Rick Hambly, W2GPS, VP of Engineering, Dr. Bob McGwier, N4HY and Dr. Al Katz, K2UYH, President of Lintech and professor of electrical engineering at College of

New Jersey, hosted a meeting for several radio amateurs and a student to tackle some of the RF parts of AMSAT-NA's Eagle project.

The attendees included:

Dr. Tom Clark, W3IWI, AMSAT-NA chief scientist
Paul Drexler, W2PED, Microwave R.F. designer
Matt Ettus, N2MJI, Gnu Radio project co-leader and designer of the USRP
                   (universal software radio peripheral)
Dr. Marc Franco, N2UO, Lintech, Inc. Engineer
Steve Hendricksen, EE student at the College of New Jersey
Jan King, W3GEY/VK4GEY, AMSAT founder, former VP Engineering,
                        and former board member
Paul Wade, W1GHZ, well know Microwave engineer whose web based
                  microwave handbook is read the world over.
Marc Zaharchuk, WA3CRM, Lockheed Space RF Engineer

Rick, W2GPS, got the meeting started with an overview of the project, our organization and the goals of Eagle. Bob, N4HY, then discussed the overall RF requirements for the spacecraft, including the use of SDX as the primary linear transponder with the need to plan for an all-analog backup and for command receivers. Tom, W3IWI, then gave a detailed analysis on the C-C Rider phased array of patches. Matt, N2MJI, talked about Gnu Radio, the Universal Software Radio Peripheral, and his proposal for the CC Rider ground station which has been generously funded by Phil Karn, KA9Q.

As a result of the weekend, Marc, N2UO, who has years of RF experience including amplifiers in space, has signed up to do the envelope restoration (HELAPS) transmitters. John Stephensen, KD6OZH, has signed up to lead the receiver development and is working first on the 70 cm receiver. Paul, W1GHZ, has agreed to design a critical component for CC Rider, the bandpass filter that will be needed to allow the transmitter and receiver to share antennas. Finally, Al Katz, K2UYH, President of Lintech, Inc. has graciously offered to host an RF facility for the AMSAT Eagle project at Lintech in Hamilton, NJ. This provides the Eagle RF team with access to a large collection of lab/test equipment and a first class clean room facility for the development, construction and testing of Eagle's RF modules.

The RF group is not the only part of the Eagle Team making progress. The mechanical and structural group is also hard at work on the modules and spaceframe for Eagle.

One of the challenges in a project as complex as Eagle is managing all the data. During the Eagle Team meeting in Pittsburgh the concept of using a Wiki based system was discussed. From that discussion Emily, W0EEC, implemented Eaglepedia, which will enhance the updating and sharing of information on a scale never before seen on any AMSAT project. Eagle team members are already uploading files and information and pending resolution of a few outstanding security issues, Eaglepedia will be linked to the AMSAT website.

While all this exciting activity is going on within the Eagle team, AMSAT-DL is also making steady progress on their P3E satellite. As I'm writing this several AMSAT-NA members are in Germany working on the IHU-3 and other modules for P3E. More details about the results of this meeting will be coming soon.

There is a lot of hard work being done by a lot of volunteers in many different locations. All this effort needs your support to maintain the building momentum. There are many ways to show your enthusiasm for getting these HEO satellites built. Join the President's Club, donate directly to the project of your choice, join or renew your AMSAT membership. All of these can be done through the mail, web site or a phone call to Martha in the AMSAT office.

73,
Lee McLamb, KU4OS
AMSAT Executive Vice President

[ANS thanks Lee, KU4OS for the above information]

/EX

SB SAT @ AMSAT $ANS-345.02
Straight Key Night on OSCAR 2006

AMSAT News Service Bulletin 345.02
From AMSAT HQ SILVER SPRING, MD.
December 11, 2005
To All RADIO AMATEURS
BID: $ANS-345.02

Once again, AMSAT-NA is pleased to sponsor Straight Key Night on OSCAR for enjoyment by all radio amateurs.

OSCAR SKN 2006 will run for 24 hours, 0000-2400 UTC, on 1 January 2006. It's very simple: no rules, no scoring, and no need to send in a log. Just operate CW through any OSCAR satellite using a straight hand key, working as many other SKN participants as you can. Contacts via the moon (OSCAR Zero) count too.

As in past years, all participants are requested to nominate one of the operators they worked for "Best Fist" recognition. Your nominee need not have the best fist of those you heard, just of those you worked.

Please send all nominations to Ray Soifer via w2rs@arrl.net (Note the new address. Ray's old address, w2rs@amsat.org, only works sporadically now due to ISP problems.)

A list of those nominated will be published via the AMSAT News Service in early February, and in The AMSAT Journal.

[ANS thanks Ray, W2RS for the above information]

/EX

SB SAT @ AMSAT $ANS-345.03
PCSAT2 Operations Guidance II

AMSAT News Service Bulletin 345.03
From AMSAT HQ SILVER SPRING, MD.
December 11, 2005
To All RADIO AMATEURS
BID: $ANS-345.03

Bob, WB4APR passed along the following info concerning PCSAT2 operations:

Since the purpose of the PCSAT series of amateur satellites is to encourage the development of more satellites for mobile communications, we decided to further modify the recommended operations plan for PCSAT2 to allow some testing from mobiles in the user service agreement. See:
http://www.ew.usna.edu/~bruninga/pec/useragreemt.txt

We added paragraph 1b below:

1) PCSAT2 is for users and data applications. It is NOT for UNATTENDED beaconing of fixed text from fixed stations... except for remote data or environmental sensor experiments at low rates...

1b) However, since the PCSAT series of satellites were designed [to] promote a... capability for mobiles, the unattended beaconing from a vehicle at a 5 minute rate for the purpose of assessing antenna or success statistics is authorized.

The caution still applies, however, IF PCSAT2 is using its 2m downlink on 145.825, to make sure you are not transmitting during a pass when the ISS crew is using voice.

Our goal is to have enough Amateur Satellites always listening on 145.825 AX.25 packet to relay short position and message data from mobiles anywhere on the planet, especially when they are out of range of the installed terrestrial packet infrastructure and Internet.

We also need more unattended ground stations listening on the PCSAT2 downlinks and feeding the data into the global APRS Internet system. If you have a spare receiver, and a TNC, you are welcome to put it on either of these downlinks: 435.275 routine (PC2), or 145.825 (PC1 and sometimes PC2), or 145.825 for ARISS.

PCSAT callsigns:

Notice that the currently active calls are PCSAT-1 on NO-44 also called PCsat, and PCSAT2 (no SSID) which is on ISS.

The callsign PCSAT-2 is also on board PCsat but it is only used for 9600 baud packet downlink and so is not involved in this current exercise. I see some stations trying to use the call PCSAT-2 and it will not work at this time.

As stated above, our goal is to have enough Amateur Satellites always listening on 145.825... and with both PCSAT-1 and PCSAT2 operating on the same channel that is giving most of us 12 passes a day to experiment with.

The goal is for a distant traveler in the wilderness to be able to get a message out a few times a day and for travelers to get their position out about once a day via this system. We think that with 3 or 4 satellites in orbit and travelers beaconing once every 10 minutes while on such expeditions, that at least one report per day will get back to civilization.. This could support hundreds of amateur radio wilderness travelers PER footprint.

[ANS thanks Bob, WB4APR for the above information]

1. Massachusetts Contact Successful

On November 29, seventeen students from Hawthorne Brook Middle School in Townsend, Massachusetts each asked a question of Bill McArthur, KC5ACR. One hundred students, teachers, parents, and administrators, including the district superintendent, attended. Among the seven media representatives who covered the event were those from four newspapers: Worcester Telegram, Townsend Times, Community Journal, and Groton Herald.

An article in the Community Journal is available for viewing by subscribers only until the article is one week old, at which time the entire article may be viewed by non-subscribers as well. See:
http://www.thecommunityjournal.com/news/2005/1202/Townsend/034.html

One of the sixth graders present for the contact, (who did not ask a question), remarked afterwards, "I'll remember this for the rest of my life."

2. Canadian School Contact Successful

Students from the Ralph McCall School in Airdrie, Alberta, Canada experienced a successful contact with the ISS on Friday, December 2. Bill McArthur, KC5ACR, answered 18 questions posed to him by eighteen students. The audience was comprised of 920 students from Ralph McCall, and 140 from the Chestermere School. Many dignitaries attended: Member of Parliament Myron Thompson, the Superintendent of Schools, one associate superintendent, a local School Board trustee, the mayor of the city of Airdrie, 4 City Councilors, Alberta education representative from the Emerging Technologies

branch, and local high school principals. In addition, the principal from Sir James Lougheed Elementary School, the next Alberta school scheduled for an ARISS contact, also attended. The contact received extensive media coverage. CBC (Canadian Broadcasting Corporation) 24 hour news channel, Newsworld, CBC local television, CBC radio, CTV news local affiliate, City TV, Global TV, Calgary Sun, Calgary Herald, 3 local Airdrie and area newspapers, and a Reuters writer all covered the event.
The CBC posted a story on its website, "Space station astronaut takes call from Alberta students." See:
http://www.cbc.ca/story/science/national/2005/12/02/astronauts-school051202.html

This contact was carried live on the IRLP 9010 Discovery Reflector, and through streaming audio (shoutcast) on its companion website. Echolink was also used, and twelve connections were made from the following countries: Thailand, the U.K., the U.S.A., and Germany.

3. Russian Contact Successful

On Thursday, November 24, school children in Star City, Russia, had a successful contact with the ISS via amateur radio. Among the audience attending the event were students, representatives from the Gagarin Cosmonaut Training Center (GCTC) and other cosmonauts.

4. Central Park Contact Update

On November 23, students from the Central Park Middle School in Schenectady, New York spoke with Bill McArthur, KC5ACR, on board the ISS. Fifty students, teachers, parents and others attended. Four television stations covered the event, broadcasting the contact to approximately 500,000. The Albany Times Union scheduled an interview with the school's public relations officer. The school is currently working with the Schenectady Amateur Radio Association and its after-school program to begin a ham radioclubforstudents.

5. ARRL Article on ESA CERN and New York Contacts

ARRL wrote a web story on the ESA CERN and Central Park contacts entitled, "Spacewalks 'Thrilling,' Astronaut Tells Students during Ham Radio Chat."
See:
http://www.arrl.org/news/stories/2005/11/30/1/?nc=1

6. ARRL Article on PCSAT2

On November 29, ARRL ran an article on PCSAT. "PCSat, PCSat2 operational information announced," may be found at: http://www.arrl.org/

7. SuitSat Status

The Russian EVA to deploy SuitSat has been delayed. The new tentative date for EVA/deployment is February 2, 2006.

8. McArthur Active on ISS Ham Radio System

Astronaut Bill McArthur, KC5ACR, continues to thrill the amateur radio community as he makes general contacts via the ISS Ham radio system. He was active on November 30 over the U.S., and again on December 1 over South America. He made additional contacts with stations in the U.S. over the December 3 - 4 weekend.

On December 1, ARRL posted a story on McArthur's contacts over the Thanksgiving holiday. "ISS commander cheers for Army in contact with Naval Academy's W3ADO" may be found at: http://www.arrl.org/

In anticipation of the Army-Navy game, held on Saturday, December 3, Bill transmitted a message via the ISS Ham packet radio system's beacon which read, "Go Army! Beat Navy!"

9. Astronaut Training Status

Congratulations to astronaut Michael Lopez-Alegria, who on Wednesday, November 30, passed his amateur radio license exam.

10. Italian Astronaut Visits with School Children

On November 9, students from the Istituto Comprensivo F. Negri in Casale Monferrato, Italy, had the opportunity to speak with Bill McArthur, KC5ACR, on board the ISS. On November 28, Italian astronaut Roberto Vittori, IZ6ERU attended a conference in Casale Monferrato and met with three students, ages 10-11, from the Negri Institute, adding to the excitement of their space contact. Vitorri participated in two of his own ARISS contacts in April 2005 with the Marconi and Malignani Institutes in Civitavecchia and Palmanova, respectively, and the winning school of the ESA competition in ESRIN, Frascati, Italy, during his Eneide Mission on the ISS.

SB SAT @ AMSAT $ANS-345.05
New Items at the AMSAT Online Store

AMSAT News Service Bulletin 345.05
From AMSAT HQ SILVER SPRING, MD.
December 11, 2005
To All RADIO AMATEURS
BID: $ANS-345.05

Many new items have been added to the AMSAT Online Store.

In addition to the 2005 Wall Clock with weather station, there is now a 2005 Desk Clock with weather station. Either clock is a really nice addition to your home, office or ham shack.

The 2005 23rd AMSAT Symposium Proceedings with all the articles that were to be presented at Lafayette is available for purchase.

A must have item, the 2004 22nd AMSAT Symposium DVD is also available. A year in the making, the DVD contains all of the proceedings, board of directors minutes, video, and audio of all the presentations and much, much more.

These items and more can be purchased with your donation at http://www.amsat.org and click on AMSAT Online Store.

KO4MA Announces Possible Satellite Operation from KG4

AMSAT News Service Bulletin 345.06
From AMSAT HQ SILVER SPRING, MD.
December 11, 2005
To All RADIO AMATEURS
BID: $ANS-345.06

Drew, KO4MA wants to give amateur stations a "heads up" in regards to a possible Caribbean satellite operating opportunity.

Drew wrote, "This is still somewhere between tentative and confirmed, but it looks like I'm going to be in KG4 from the evening December 14 to December 18. If I can secure the license upon arrival, I'll try to be QRV in the evenings and possibly early morning passes."

The best bet will be to look on SO-50, FO-29, and VO-52. Drew says he will post his latest updates on the AMSAT-BB.

[ANS thanks Drew, KO4MA for the above information]

N5AFV Announces FM Satellite DXpedition

AMSAT News Service Bulletin 345.08
From AMSAT HQ SILVER SPRING, MD.
December 11, 2005
To All RADIO AMATEURS
BID: $ANS-345.08

Allen, N5AFV says he is pleased to announce that he will be bringing his FM satellite gear on a cruise ship sailing from Port Everglades, FL to the island of Dominica and back. He plans to work the FM birds AO-27, SO-50 and AO-51 using his Icom W32A HT and an AL800 telescoping antenna.

While Allen plans shipboard operation, and has done so successfully in the past, there is always the possibility that he will not be allowed to operate from the ship. If that happens, Allen will try to operate onshore at the ports of call where he can do so.

Itinerary
Dec 17, Leave Port Everglades, FL, 1700 EST
Call signs N5AFV and N5AFV/C6A
Dec 18, Nassau, Bahamas, 0800-1600 local time
Call sign N5AFV/C6A
Dec 19, At Sea
Call sign N5AFV/C6A
Dec 20, San Juan, PR, 1300-2300 local time
Call sign KP4/N5AFV
Dec 21, St. Thomas, USVI, 0800-1700 local time
Call sign KP2/N5AFV
Dec 22, Dominica, 1200-1900 local time
Call sign J79AFV
Dec 23, St. Barts, 0800-2300 local time
Call sign FJ/N5AFV
Dec 24, Tortolla, BVI, 0800-1500 local time
Call sign VP2V/N5AFV
Dec 25, At Sea
Call sign N5AFV/C6A
Dec 26, At Sea
Call sign N5AFV/C6A
Dec 27, Arrive Port Everglades, FL, 0700 EST
Call sign N5AFV

VO-52 HAMSAT
Catalog Number: 28650
Launch Date: May 05,2005

Status: Testing
Current Mode: U/V - Dutch Transponder

Proposed frequencies:

Indian Transponder:
Uplink : 435.220 MHz to 435.280 MHz LSB/CW
Downlink: 145.870 MHz to 145.930 MHz USB/CW
Beacom : 145.859330 MHZ CW

Dutch Transponder:
Uplink : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacon : 145.860MHz 12WPM with CW message

This from William Leijenaar, PE1RAH:
Dear AMSATs,

I wish I had the same free time now as when I designed the HAMSAT and P3e transponder. Unfortunatly these times have been changed (for the moment) due to QRL things.

However, I often try to be QRV on the HAMSAT and check the signals from my transponder and read the messages on amsat-bb. I just read about the beacon "problem". The "problem" with the beacon is actually not a problem but it is known. The beacon signal is injected at the IF, and runs throught the transponder from the IF section, up converter, via the final PA to the antenna.

The changes you hear on the beacon frequency is caused by the amplitude limiters in the IF that are activated by a too strong uplink signal. These limiters are only for protection, to avoid that the IF and VHF amplifiers get overloaded and generate all kinds of unwanted signals at the output.

My transponder is straight forward to keep it physical small and cheap in cost (as I had no sponsors). Unlike most other transponders my transponder on HAM-SAT has no AGC system. It gives always maximum gain with maximum sensitivity.

The main reason is that the AGC systems I had didn't fit in the small sized box. As an option I choose for limiters, and it worked great in tests.

Secondly, I tought limiters might be helpfull against aligators. To deal with too strong signals most transponder have an AGC to lower the RX gain, and actually be helpfull to the alligators. With the limiters their SSB signal will get distorted and they might lower their powers to have better audio quality.

The change in beacon sound is an indication for too much uplink powers and will be heared mainly in areas where higher powers are available on the uplink, like US, Europe, Japan...

Its funny to know that nobody here has discovered that the bandpass is shifted some down in frequency... There is no technical failure, the reason is known here... No panic please :o)

Please keep in mind that this transponder is my privat work and privat money. Frankly speaking this is my privat transponder I "give" to the amateur world. I was one of those many poor students, and this was the best I could do with my resources I had available at that time... The whole thing is just 16cm x 10cm x 3cm !! even smaller than the professional Indian transponder :o)

I hope you all enjoy my transponder even when it is not perfect.
[11272005]
=====
AO-51 ECHO
Catalog number: 28375
Launch date: June 29, 2004

Status: Testing
Curent Mode: PBBS - V/U 9k6
VOICE REPEATER - V/U FM

Analog voice downlink: 435.300 MHz FM
435.150 MHz FM
Analog voice uplink: 145.880 MHZ FM
145.920 MHz FM 67Hz PL tone
1268.700 MHz FM 67Hz PL tone

Digital Downlinks: 435.150 MHz FM, 38k4 Digital, PBP, 1 watt output
2401.200 MHz FM 38k4 bps, AX.25
Digital Uplink: 145.860 MHz FM, 9k6 Digital, Pacsat Broadcast Protocol (PBP)

Broadcast: PECHO-11
BBS: PECHO-12

This from the AO-51 Command team:

12 Dec
FM Repeater, V/S
Uplink: 145.920 mhz FM, No PL Tone
Downlink 2401.200 mhz FM

19 Dec
FM Repeater, V/U
Uplink: 145.920 mhz FM, 67 hz PL Tone
Downlink 435.300 mhz FM
9k6 Digital, V/U, PBP BBS (Pacsat Broadcast Protocol BBS)
Uplink: 145.860 mhz FM, 9k6 PBP Digital
Downlink: 435.150 mhz FM, 9k6 PBP Digital

=====

SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that SO-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz. The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10 minute timer.

[09122004]

=====

FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

John, N4QWL reports on July 16th, 2005:
Last evening I had a AOS to LOS qso with WI2W. FO-29 came up at 01:17z here in FM07 and I found WI2W and we chatted until 01:33z. The satellite was at 2 degrees elevation when I finally heard him start to crackle a bit. What a great QSO! To think that I watched this bird launch back in 1996 and it is still working so well is a real thrill. I believe I still have the video. I might just look for it and watch it again. Boy do I love this satellite stuff! Look for you all up there.

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will automatically analyze all digital telemetry from the satellite (such as current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[ANS-WSR wishes to thanks John, N4QWL for this week's report]
[11132005]
=====
AO-27 AMRAD
Catalog number: 22825
Launched: September 26, 1993

Status: Operational

Uplink: 145.850 MHz FM
Downlink: 436.795 MHz FM

The latest information on AO-27 from control operator Michael Wyrick, N3UC (former N4USI), can be found at:
http://www.ao27.org

An AO-27 question-and-answer page is available on the AMSAT-NA web site, with updates by Ray, W2RS. The URL is:
http://www.amsat.org/amsat/intro/ao27faq.html

[ANS-WSR thanks John, K6YK, for this week's AO-27 report]
[11132005]
=====
AO-7 AMSAT OSCAR 7
Catalog number: 07530
Launch Date: November 15, 1974

Status: Semi-operational in sunlight.
Return to active status: June 21,2002

Uplink: 145.850 to 145.950 MHz CW/USB Mode A
            432.125 to 432.175 MHz CW/LSB Mode B
Downlink: 29.400 to 29.500 MHz CW/USB Mode A
            145.975 to 145.925 MHz CW/USB Mode B
Beacon: 29.502 MHz, 145.972 MHz, 435.1 MHz, 2304.1 MHz

Emily, W0EEC has created a website to allow the users of AO-7 to record contacts, observations and use of the satellite more effectively at:
http://www.emilyshouse.com/experthams/ao7/main.php
This includes the ability to log contacts.

Tim, K3TZ has written a program to decode AO-07 telemetry. The program can be downloaded at:
http://www.qsl.net/k3tz/files/K3TZ_AO-07_Telemetry_Decoder_0.5.zip

For more AO-7 info:

NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Operational

General Usage Uplink/Downlink:145.827 MHz 1200 Baud
Special Usage Downlink: 144.390 Mhz 1200 Baud

PCSat is a 1200-baud APRS digipeater designed for use by stations using hand-held or mobile transceivers. Downlinks feed a central web site at:
http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy under the guidance of Bob Bruninga, WB4APR.
[11272005]
=====
CUTE-1
Catalog number: 27844
Launched: June 30,2003

Status: Operational

Uplink: ?
Downlink: 436.8375 CW
              437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ?)
Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as OPERATIONAL?
Indeed it is very operational as a CUBESAT sending CW telemetry on 436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at 14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz. Initial orbital parameters were period 101.4 min, apogee 831 km, perigee 819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

GO-32 TECHSAT-1B
Catalog number: 25397
Launch Date: July 10, 1998

Status: Operational

Downlink: 435.225 MHz FM (9600-baud FSK)
(435.325 n/a - temperature problems)
Uplinks: 145.850, 145.890, 145.930 FM
1269.700, 1269.800, 1269.900 FM
Broadcast Callsign: 4XTECH-11
BBS Callsign: 4XTECH-12

Jeff, KB2M, reports November 15th, 2005:
I might be wrong about this, but as I am the only one I see working GO-32 here goes. If you do a DIR request up on the 145.890 uplink the bird turns on. Give it a try....

More information of GO-32 can be found at:
http://www.iarc.org/techsat/techsat.html
[ANS-WSR wishes to thank Jeff, KB2M for this weeks report.]

=====

UO-11 OSCAR-11
Catalog number: 14781
Launched: March 1, 1984

Status: Semi-operational?

Telemetry Downlink: 145.826 MHz. FM (1200-baud AFSK).
approx. 10 days ON, 10 days OFF
Mode-S Beacon: 2401.500 MHz. ... OFF
UHFBeacon: 435.025 MHz. ... OFF

During the period 24 September to 25 October 2005 the VHF beacon on 145.826MHz resumed transmissions, as expected, on 30 September, sometime between 06:05 and 06:42 UTC passes. Reasonable signals were also captured on the 17:44 pass, later that day. However by the 16:49 UTC pass on 02 October, the beacon had switched OFF. Transmissions resumed on 21 October, and should continue until around 31 October.

The on-board clock continues to show a very large error. Currently it is 19.2394 days slow, having lost six hours while the beacon was last OFF, ie. between 02 October and 21 October. When the beacon is ON, the clock is stable to within a few seconds.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working.

The eclipses have now ended, and the satellite should be in continuous sunlight for the remainder of this year, and well into next year. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures.

The watchdog timer appears to be operating on the 20 day cycle, ie. approximately ten days ON followed by 10 days OFF. It appears to be uneffected by problems of the on-board clock. However, poor solar attitude, and battery problems, may be combining to produce a low line voltage. This causes the beacon to switch OFF premeaturely, and resets the watchdog timer cycle.

The Beacon frequencies are -
VHF 145.826 MHz. AFSK FM ASCII Telemetry
UHF 435.025 MHz. OFF
S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is:

www.users.zetnet.co.uk/clivew/

If you place this bulletin on a terrestrial packet network, please use the bulletin identifier $BID:U2RPT114.CWV, to prevent duplication.

======

POSAT-1 PO-28
Catalog Number: 22829
Launched : September 25, 1993

Status: Operational - Not open for Amatuer use

Downlink: 435.250 MHz
435.275 MHz

Uplink: 145.925 MHz
145.975 MHz

Broadcast callsign: POSAT1-11
BBS callsign: POSAT1-12

PO-28 (POSAT-1), Portugal's first satellite, launched 12 years ago,will be turned over to Amateur Radio use in the very near future. That was the word July 30 from AMSAT-UK Secretary Jim Heck, G3WGM, during the AMSAT-UK International Space Colloquium in Guildford, England.

Launched September 25, 1993, the satellite operated as a packet store-and-forward BBS (9600 baud FM FSK) on Amateur Radio frequencies for several weeks in early 1994. Over the years, PO-28's primary usage has been commercial, although plans have called for eventually shifting its operation to ham radio use. G3WGM reports that following lengthy negotiations it has been agreed thatthe satellite can be switched permanently to amateur frequencies. The change over is expected to take a couple of weeks.

The Portuguese satellite was built at the University of Surrey as part of a collaborative satellite technology program that involved industry and academe. Uplink frequencies will be 145.925 and 145.975 MHz. Downlink frequencies will be 435.250 and 435.275 MHz. More information on PO-28 is on the AMSAT Web site

http://www.amsat.org/amsat/sats/n7hpr/po28.html.

Uplink Frequencies: 145.925 and 145.975 MHz
Downlink Frequencies: 435.250 and 435.275 MHz

Orbit: 822 x 800 km, 98.6 deg inclined, sun-synchronous.

Transponder capabilities include FM repeater and 38k4 data. If you want to hear how loud this satellite is, listen on 429.950 until the change back to amateur radio service.

Keplerian elements for PO-28 are currently contained in the AMSAT keps bulletins and at Celestrak in amateur.txt using the name "POSAT". Users of Space Track should query the NORAD Satellite ID number 22829. The name listed by Space Track is "EYESAT A".

More information of POSAT-1 can be found at:
http://www.ee.surrey.ac.uk/SSC/CSER/UOSAT/missions/posat1.html
http://www.amsat.org/amsat/sats/n7hpr/po28.html
[ANS-WSR wishes to thank Duane Naugle, KO6BT, for this week's update.]
[11062005]
=====
AO-10 OSCAR 10
Catalog number: 14129
Launched: June 16, 1983

Status: Non-operational

Uplink: 435.030 to 435.180 MHz CW/LSB
Downlink: 145.975 to 145.825 MHz CW/USB
Beacon: 145.810 MHz (unmodulated carrier)

AO-10 has been locked into a Mode-B, 70-cm uplink and 2-meter downlink for several years.

W4SM has more information about the satellite at the following URL:
http://www.cstone.net/~w4sm/AO-10.html
[05092004]
=====
IO-26 ITAMSAT
Catalog number: 22826
Launch Date: September 26, 1993

Status: Non-operational

Uplink: 145.875 145.900 145.925 145.950 MHz FM (1200-baud)
Downlink: 435.812 MHz SSB
Broadcast Callsign: ITMSAT-11
BBS: ITMSAT-12

Alberto E. Zagni - I2KBD reports on 02/13/05
The spacecraft is in MBL (safe mode) and is trasmitting just 6 channels of telemetry. Temperatures and voltage are nominal, but there seems to be a problem with the onboard receiver, refusing to accept commands.
The spacecraft was launched in 1993, thus nearing 12 years in orbit...

Best regards
Alberto E. Zagni - I2KBD
ITAMSAT Mission Director

MO-46 TIUNGSAT-1

Catalog number: 26548
Launched: September 26, 2000

Status: Operational

Uplink: 145.850 or 145.925 MHz 9600-baud FSK
Downlink: 437.325 MHz
Broadcast callsign: MYSAT3-11
BBS: MYSAT3-12

TiungSat-1 is Malaysia's first micro-satellite and in addition to commercial land and weather imaging payloads offers FM and FSK Amateur Radio communication.

TiungSat-1, named after the mynah bird of Malaysia, was developed as a collaborative effort between the Malaysian government and Surrey Satellite Technology Ltd.
[11202005]

=====

AO-49 AATiS OSCAR-49 (SAFIR-M)

Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio and telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon.
Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at: http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:

http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

- AMSAT News Service (ANS)
- General satellite discussion (AMSAT-BB)
- Orbit data (KEPS)
- Manned space missions (SAREX)
- District of Columbia area (AMSAT-DC)
- New England area (AMSAT-NE)
- AMSAT Educational Liaison mailing list (AMSAT-EDU)
- AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James K. Darrow, KB9MMC.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the
memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen,
G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:

BID: $ANS-352.S1

VO-52 HAMSAT
Catalog Number: 28650
Launch Date: May 05,2005

Status: Testing
Current Mode: U/V - Dutch Transponder

Proposed frequencies:

Indian Transponder:
Uplink : 435.220 MHz to 435.280 MHz LSB/CW
Downlink: 145.870 MHz to 145.930 MHz USB/CW
Beacom : 145.859330 MHZ CW

Dutch Transponder:
Uplink : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacon : 145.860MHz 12WPM with CW message

This from William Leijenaar, PE1RAH:
Dear AMSATs,

I wish I had the same free time now as when I designed the HAMSAT and P3e transponder. Unfortunatly these times have been changed (for the moment) due to QRL things.

However, I often try to be QRV on the HAMSAT and check the signals from my transponder and read the messages on amsat-bb. I just read about the beacon "problem". The "problem" with the beacon is actually not a problem but it is known. The beacon signal is injected at the IF, and runs throught the transponder from the IF section, up converter, via the final PA to the antenna.

The changes you hear on the beacon frequency is caused by the amplitude limiters in the IF that are activated by a too strong uplink signal. These limiters are only for protection, to avoid that the IF and VHF amplifiers get overloaded and generate all kinds of unwanted signals at the output.

My transponder is straight forward to keep it physical small and cheap in cost (as I had no sponsors). Unlike most other transponders my transponder on HAM-SAT has no AGC system. It gives always maximum gain with maximum sensitivity.

The main reason is that the AGC systems I had didn't fit in the small sized box. As an option I choose for limiters, and it worked great in tests.

Secondly, I tought limiters might be helpfull against aligators. To deal with too strong signals most transponder have an AGC to lower the RX gain, and actually be helpfull to the alligators. With the limiters their SSB signal will get distorted and they might lower their powers to have better audio quality.

The change in beacon sound is an indication for too much uplink powers and will be heared mainly in areas where higher powers are available on the uplink, like US, Europe, Japan...

Its funny to know that nobody here has discovered that the bandpass is shifted some down in frequency... There is no technical failure, the reason is known here... No panic please :o)

Please keep in mind that this transponder is my privat work and privat money. Frankly speaking this is my privat transponder I "give" to the amateur world. I was one of those many poor students, and this was the best I could do with my resources I had available at that time... The whole thing is just 16cm x 10cm x 3cm !! even smaller than the professional Indian transponder :o)

I hope you all enjoy my transponder even when it is not perfect.

January 2006 Amsat Kid's Day on AO-51

Amsat-NA, the AO-51 Command Team, and the AO-51 Operations Team will sponsor Kid's Day on AO-51 on January 8, 2006. The event will run from approximately 0100 UTC 8 January until 0345 UTC 9 January. The event is open to all kids, worldwide. We ask all amateur radio stations to give this short time window to promote satellite operations with kids, by actually showing a kid how to make contacts via AO-51, providing a station to contact, or stepping aside to allow others to make contacts with the kids. During the event, please limit contacts to stations that are operating with kids at the microphone. This should allow the kids to have a nice QSO and pass some information. Kids can tell their name, age, who is helping them operate on AO-51, where they live, and other information about themselves.

AO-51 will be configured in the following mode during the event. Please note the change in the uplink frequency for the event. The PL tone will be turned off for the event.

Uplink: 145.880 mhz FM voice
Downlink: 435.300 mhz FM voice

The digital transponder on 435.150 will be turned off during the event.

See http://www.arrl.org/FandES/ead/kd-rules.html on the ARRL website for more Kids Day information.

Have fun and enjoy AO-51!

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that SO-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz. The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer

on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10 minute timer.
[09122004]

=====
FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

John, N4QWL reports on July 16th, 2005:
Last evening I had a AOS to LOS qso with WI2W. FO-29 came up at 01:17z here in FM07 and I found WI2W and we chatted until 01:33z. The satellite was at 2 degrees elevation when I finally heard him start to crackle a bit. What a great QSO! To think that I watched this bird launch back in 1996 and it is still working so well is a real thrill. I believe I still have the video. I might just look for it and watch it again. Boy do I love this satellite stuff! Look for you all up there.

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will automatically analyze all digital telemetry from the satellite (such as current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[ANS-WSR wishes to thanks John, N4QWL for this week's report]
[11132005]

=====
AO-27 AMRAD
Catalog number: 22825
Launched: September 26, 1993

Status: Operational

Uplink: 145.850 MHz FM
Downlink: 436.795 MHz FM

The latest information on AO-27 from control operator Michael Wyrick, N3UC

(former N4USI), can be found at:
http://www.ao27.org

An AO-27 question-and-answer page is available on the AMSAT-NA web site, with updates by Ray, W2RS. The URL is:
http://www.amsat.org/amsat/intro/ao27faq.html

[ANS-WSR thanks John, K6YK, for this week's AO-27 report]

INTERNATIONAL SPACE STATION (ISS) - ARISS
Catalog number: 25544
Launch date: November 20, 1998

Status: Operational
Current Mode: DIGIPEATER
Digipeater: ACTIVE

The current Expedition 12 crew is:
Commander: William McArthur - KC5ACR
Flight Engineer: Valery Tokarev - (no call)

Worldwide packet uplink: 145.990 MHz FM
Region 1 voice uplink: 145.200 MHz FM
Region 2/3 voice uplink: 144.490 MHz FM
Worldwide downlink: 145.800 MHz FM

Repeater Uplink: 437.800 MHz FM
Repeater Downlink: 145.800 MHz FM
Doppler Shift is 10 KHz

Russian callsigns: RS0ISS, RZ3DZR
USA callsign: NA1SS
Packet station mailbox callsign: RS0ISS-11
Packet station keyboard callsign: RS0ISS-3
Digipeater callsign: ARISS

The ARRL Reports;

ISS commander shooting for WAC, WAS and maybe DXCC from space

ISS Expedition 12 Commander Bill McArthur, KC5ACR, has proven to be one of the more active Amateur Radio on the International Space Station (ARISS) operators among ham radio operators who have occupied the space station. In fact, McArthur's having so much fun operating from space that he's hoping to complete Worked All Continents (WAC), Worked All States (WAS) and maybe even DXCC from space.

"Bill McArthur continues to be active on voice and now has a couple of personal goals he is trying to achieve," says ARISS Ham Radio Project Engineer Kenneth Ransom, N5VHO. "He is trying to talk to someone in every state in the United States. According to his log, he has managed to work 37 states so far." In addition, Ransom says, McArthur wants to work as many countries as he can.

"He's off to a good start with 28 DXCC entities in his log as of December 12," he said. "These contacts have been with amateur stations on every continent with the exception of Antarctica." That contact could happen this weekend, however. Although the IARU does not require WAC applicants to have worked Antarctica, Ransom says that ARISS tradition calls for an Antarctica QSO to achieve WAC from space "since the astronauts seem to have an unfair advantage."

Expedition 9 astronaut Mike Fincke, KE5AIT, became the first ISS crew member to contact all seven of the world's continents via Amateur Radio from NA1SS.

States on McArthur's most-needed list are Alaska, Hawaii, Idaho, Missouri, New Hampshire, New Mexico, North Dakota, Pennsylvania, Rhode Island, South Dakota, Vermont, Virginia and Washington.

"The list of DXCC entities is just starting to grow, so he needs a lot right now," Ransom conceded this week, adding that he hasn't included ARISS school group contacts in his counts and hopes McArthur will achieve his goals without them. "We won't know the official results for months after the mission," he added.

McArthur is about halfway through his approximately six-month duty tour aboard the ISS. He and crewmate Valery Tokarev will return to Earth in April.

During Thanksgiving week, McArthur reportedly made some three dozen casual contacts, most of them over North America and a few over Europe and New Zealand. He made contacts with stations in the US on December 6. He also had QSOs with Australia, New Zealand and the US on December 11.

[WSR Thanks the ARRL for the above information]

The ISS Fan Club Webpage < http://www.issfanclub.com > reports that the Digipeater is active as of Nov 14th, 2005 at 0207UTC.

The ISS daily crew schedule can be found at:
http://spaceflight.nasa.gov/station/timelines/
Remember that the crew operates on UTC time. Also, all of the time line is NOT translated from Russian and posted.

NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Operational

General Usage Uplink/Downlink:145.827 MHz 1200 Baud
Special Usage Downlink: 144.390 Mhz 1200 Baud

Bob WB4APR reports:

The PCSAT-1 digipeater on 145.825 was still going strong and working well up until December 15.

The activity page http://pcsat.aprs.org shows about 75 stations accessed PSCAT-1 between December 13 and 14. This won't last much longer since PCSAT-1 is now back to 30 minute eclipses headed towards worst-case of 35 minutes during the week of December 18-25.

Sometime before 2202z on the 15th PCSAT-1 suffered a reset to W3ADO-1 and lost its low power settings. Now at 1740z on the

17th, the US Naval Academy Satellite Lab sent the restore commands, but with 33 minute eclipses, it is doubtfull they will hold. We may have lost her until March, 2006.

The command station at the US Naval Academy should be able to keep PCSAT-1 alive indefinately as long as stations do not user her in the dark and the command stations never let her 68 hour command watch-dog timer time out.

Anyone can work PCSAT-1 with ANY typical 1200 baud packet station on 145.825. Just set your path to UNPROTO APRS via ARISS (the same that you use via ARISS on the ISS or via PCSAT2). Mobiles with the D700 or the TH-D7 HT APRS radios will see packets directly on their front panel and can work it from their mobile.

[ANS-WSR thanks Bob Bruninga, WB4APR and the US Naval Academy Satellite Lab for the above information]

PCSat is a 1200-baud APRS digipeater designed for use by stations using hand-held or mobile transceivers. Downlinks feed a central web site at: http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy under the guidance of Bob Bruninga, WB4APR.
[12182005]
=====
CUTE-1
Catalog number: 27844
Launched: June 30,2003

Status: Operational

```
Uplink:          ?
Downlink:     436.8375 CW
              437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ? )
```

Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as OPERATIONAL?
Indeed it is very operational as a CUBESAT sending CW telemetry on 436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:

```
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6
```

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at 14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz. Initial orbital parameters were period 101.4 min, apogee 831 km, perigee

819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

[ANS WSR wishes to thank Cliff, K7RR, for this week's information]
[07242005]
=====

AO-16 PACSAT
Catalog number: 20439
Launch Date: January 22, 1990

Status: Semi-operational, the digipeater command is on and open for APRS users.

Uplink: 145.90 145.92 145.94 145.96 MHz FM
                      (using 1200-baud Manchester FSK)
Downlink: 437.026 MHz SSB (1200-baud PSK)
Mode-S Beacon: 2401.1428 MHz
Broadcast Callsign: PACSAT-11
BBS: PACSAT-12

A WOD collection of current graphics along with general information and telemetry samples can be found at:
http://www.telecable.es/personales/ea1bcu
[05092004]
=====
UO-11 OSCAR-11
Catalog number: 14781
Launched: March 1, 1984

Status: Semi-operational?

Telemetry Downlink: 145.826 MHz. FM (1200-baud AFSK).
approx. 10 days ON, 10 days OFF
Mode-S Beacon: 2401.500 MHz. ... OFF
UHFBeacon: 435.025 MHz. ... OFF

During the period 21 November to 14 December 2005 the VHF beacon on 145.826 MHz has been heard from 05 to 10 December.

Signals have been very variable during this period. Sometimes received at good strength, at other times they were inaudible, even with the BFO switched ON (ie. in CW mode).

If the watchdog resets as expected, then the beacon should restart around 31 December. However, more observations are needed to confirm the timing of the watchdog timer, and whether it is being reset prematurely. Therefore, it may be worth listening for the satellite a few days before 31 December.

The on-board clock continues to show a very large error. On 09 December it was 21.8 days slow.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working.

The eclipses have now ended, and the satellite should be in continuous sunlight for the remainder of this year, and next year until early May. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures. Power supply problems can be caused by poor earth pointing attitude, ie the sunlight illuminating the ends of the satellite, instead of the solar arrays.

The watchdog timer appears to be operating on the 20 day cycle, ie. approximately ten days ON followed by 10 days OFF. It appears to be unaffected by problems of the on-board clock. However, poor solar attitude, and battery problems, may be combining to produce a low 14 volt line supply. This appears to be causing the beacon to switch OFF prematurely, and resets the watchdog timer cycle. It seems very likely that the battery is now unable to retain its charge, due to having endured around 100,000 partial charge/discharge cycles, always a problem with NiCad cells. When analogue telemetry was transmitted, it showed an unexplained current drain from the 14 volt line. This just adds to the present problems.

The Beacon frequencies are -
VHF 145.826 MHz. AFSK FM ASCII Telemetry
UHF 435.025 MHz. OFF
S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is www.users.zetnet.co.uk/clivew/

======

POSAT-1 PO-28
Catalog Number: 22829
Launched : September 25, 1993

Status: Operational - Not open for Amatuer use

Downlink: 435.250 MHz
435.275 MHz

Uplink: 145.925 MHz
145.975 MHz

Broadcast callsign: POSAT1-11
BBS callsign: POSAT1-12

PO-28 (POSAT-1), Portugal's first satellite, launched 12 years ago,will be turned over to Amateur Radio use in the very near future. That was the word July 30 from AMSAT-UK Secretary Jim Heck, G3WGM, during the AMSAT-UK International Space Colloquium in Guildford, England.

Launched September 25, 1993, the satellite operated as a packet store-and-forward BBS (9600 baud FM FSK) on Amateur Radio frequencies for several weeks in early 1994. Over the years, PO-28's primary usage has been commercial, although plans have called for eventually shifting its operation to ham radio use. G3WGM reports that following lengthy negotiations it has been agreed thatthe satellite can be switched permanently to amateur frequencies. The change over is expected to take a couple of weeks.

The Portuguese satellite was built at the University of Surrey as part of a collaborative satellite technology program that involved industry and academe. Uplink frequencies will be 145.925 and 145.975 MHz. Downlink frequencies will be 435.250 and 435.275 MHz. More information on PO-28 is on the AMSAT Web site

http://www.amsat.org/amsat/sats/n7hpr/po28.html.

Uplink Frequencies: 145.925 and 145.975 MHz
Downlink Frequencies: 435.250 and 435.275 MHz

Orbit: 822 x 800 km, 98.6 deg inclined, sun-synchronous.

Transponder capabilities include FM repeater and 38k4 data. If you want to hear how loud this satellite is, listen on 429.950 until the change back to amateur radio service.

Keplerian elements for PO-28 are currently contained in the AMSAT keps bulletins and at Celestrak in amateur.txt using the name "POSAT". Users of Space Track should query the NORAD Satellite ID number 22829. The name listed by Space Track is "EYESAT A".

More information of POSAT-1 can be found at:
http://www.ee.surrey.ac.uk/SSC/CSER/UOSAT/missions/posat1.html
http://www.amsat.org/amsat/sats/n7hpr/po28.html
[ANS-WSR wishes to thank Duane Naugle, KO6BT, for this week's update.]
[11062005]
=====
AO-10 OSCAR 10
Catalog number: 14129
Launched: June 16, 1983

Status: Non-operational

Uplink: 435.030 to 435.180 MHz CW/LSB
Downlink: 145.975 to 145.825 MHz CW/USB
Beacon: 145.810 MHz (unmodulated carrier)

AO-10 has been locked into a Mode-B, 70-cm uplink and
2-meter downlink for several years.

W4SM has more information about the satellite at the following URL:
http://www.cstone.net/~w4sm/AO-10.html

=====
IO-26 ITAMSAT
Catalog number: 22826
Launch Date: September 26, 1993

Status: Non-operational

Uplink: 145.875 145.900 145.925 145.950 MHz FM (1200-baud)
Downlink: 435.812 MHz SSB
Broadcast Callsign: ITMSAT-11
BBS: ITMSAT-12

Alberto E. Zagni - I2KBD reports on 02/13/05
The spacecraft is in MBL (safe mode) and is trasmitting just 6 channels of telemetry. Temperatures and voltage are nominal, but there seems to be a problem with the onboard receiver, refusing to accept commands.
The spacecraft was launched in 1993, thus nearing 12 years in orbit...

Best regards
Alberto E. Zagni - I2KBD
ITAMSAT Mission Director

TiungSat-1 is Malaysia's first micro-satellite and in addition to commercial land and weather imaging payloads offers FM and FSK Amateur Radio communication.

TiungSat-1, named after the mynah bird of Malaysia, was developed as a collaborative effort between the Malaysian government and Surrey Satellite Technology Ltd.
[11202005]

=====

AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio and telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at: http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:

```

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James K. Darrow, KB9MMC.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the

memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:
ans-editor{at}amsat.org

AMSAT NEWS SERVICE
ANS-352

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:
ans-editor@amsat.org

In this edition:

* Straight Key Night on OSCAR 2006

* OSCAR-11 REPORT for December
* PCSAT-1 Enters Eclipse Cycle
* Amateur Station Hears MRO at 45 Million Miles
* ARISS Status for the week of December 12, 2005
* FM Satellites: Remember to Listen for N5AFV Aboard a Cruise Ship
* First Announcement of January 2006 Amsat Kid's Day on AO-51
* AMSAT Awards This Week

SB SAT @ AMSAT $ANS-352.01
Straight Key Night on OSCAR 2006

AMSAT News Service Bulletin 352.01
From AMSAT HQ SILVER SPRING, MD.
December 18, 2005
To All RADIO AMATEURS
BID: $ANS-352.01

Once again, AMSAT-NA is pleased to sponsor Straight Key Night on OSCAR for enjoyment by all radio amateurs.

OSCAR SKN 2006 will run for 24 hours, 0000-2400 UTC, on 1 January 2006. It's very simple: no rules, no scoring, and no need to send in a log. Just operate CW through any OSCAR satellite using a straight hand key, working as many other SKN participants as you can. Contacts via the moon (OSCAR Zero) count too.

As in past years, all participants are requested to nominate one of the operators they worked for "Best Fist" recognition. Your nominee need not have the best fist of those you heard, just of those you worked.

Please send all nominations to Ray Soifer via w2rs@arrl.net.

A list of those nominated will be published via the AMSAT News Service in early February, and in The AMSAT Journal.

[ANS thanks Ray, W2RS for the above information]

/EX

SB SAT @ AMSAT $ANS-352.02
OSCAR-11 REPORT for December

AMSAT News Service Bulletin 352.02
From AMSAT HQ SILVER SPRING, MD.
December 18, 2005
To All RADIO AMATEURS
BID: $ANS-352.02

During the period 21 November to 14 December 2005 the VHF beacon on 145.826 MHz has been heard from 05 to 10 December.

Signals have been very variable during this period. Sometimes received at good strength, at other times they were inaudible, even with the BFO switched ON (ie. in CW mode).

If the watchdog resets as expected, then the beacon should restart around 31 December. However, more observations are needed to confirm the timing of the watchdog timer, and whether it is being reset prematurely. Therefore, it may be worth listening for the satellite a few days before 31 December.

The on-board clock continues to show a very large error. On 09 December it was 21.8 days slow.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working.

The eclipses have now ended, and the satellite should be in continuous sunlight for the remainder of this year, and next year until early May. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures. Power supply problems can be caused by poor earth pointing attitude, ie the sunlight illuminating the ends of the satellite, instead of the solar arrays.

The watchdog timer appears to be operating on the 20 day cycle, ie. approximately ten days ON followed by 10 days OFF. It appears to be unaffected by problems of the on-board clock. However, poor solar attitude, and battery problems, may be combining to produce a low 14 volt line supply. This appears to be causing the beacon to switch OFF prematurely, and resets the watchdog timer cycle.
It seems very likely that the battery is now unable to retain its charge, due to having endured around 100,000 partial charge/discharge cycles, always a problem with NiCad cells. When analogue telemetry was transmitted, it showed an unexplained current drain from the 14 volt line. This just adds to the present problems.

The Beacon frequencies are -
VHF 145.826 MHz. AFSK FM ASCII Telemetry
UHF 435.025 MHz. OFF
S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is www.users.zetnet.co.uk/clivew/

[ANS thanks Clive G3CWV for the above information]

/EX

SB SAT @ AMSAT $ANS-352.03
PCSAT-1 Enters Eclipse Cycle

AMSAT News Service Bulletin 352.03
From AMSAT HQ SILVER SPRING, MD.
December 18, 2005
To All RADIO AMATEURS
BID: $ANS-352.03

The PCSAT-1 digipeater on 145.825 was still going strong and working well up until December 15.

The activity page http://pcsat.aprs.org shows about 75 stations accessed PSCAT-1 between December 13 and 14. This won't last much longer since PCSAT-1 is now back to 30 minute eclipses headed towards worst-case of 35 minutes during the week of December 18-25.

Sometime before 2202z on the 15th PCSAT-1 suffered a reset to W3ADO-1 and lost its low power settings. Now at 1740z on the 17th, the US Naval Academy Satellite Lab sent the restore commands, but with 33 minute eclipses, it is doubtfull they will hold. We may have lost her until March, 2006.

The command station at the US Naval Academy should be able to keep PCSAT-1 alive indefinately as long as stations do not user her in the dark and the command stations never let her 68 hour command watch-dog timer time out.

Anyone can work PCSAT-1 with ANY typical 1200 baud packet station on 145.825. Just set your path to UNPROTO APRS via ARISS (the same that you use via ARISS on the ISS or via PCSAT2). Mobiles with the D700 or the TH-D7 HT APRS radios will see packets directly on their front panel and can work it from their mobile.

For more information see:
http://www.ew.usna.edu/~bruninga/pcsat.html

[ANS thanks Bob, WB4APR and the US Naval Academy Satellite Lab for the above information]

/EX

SB SAT @ AMSAT $ANS-352.04
Amateur Station Hears MRO at 45 Million Miles

AMSAT News Service Bulletin 352.04
From AMSAT HQ SILVER SPRING, MD.
December 18, 2005
To All RADIO AMATEURS
BID: $ANS-352.04

This week the Mars-Net e-mail list reported that Paul Marsh, an amateur observer, has detected Mars Reconnaissance Orbiter at X band at a range of 45 million miles from Earth.

The MRO transmits on Deep Space Network channel 32 which is 8439.444444 MHz. By the time that reaches Earth, due to doppler the frequency has dropped to around 8439.031 MHz. The MRO has a 3 meter diameter dish antenna driven by a 100 Watt X-band TWTA to transmit signals to Earth. The signal coming in our direction is of the order of 4.2 mega watts of RF.

The signal was clearly visible in the FFT display of an SDR-14 software radio, and was just audible in SSB bandwidth of a communications receiver. The signal was consistently about 6 to 8 dB above the noise floor. More details can seen at: http://www.uhf-satcom.com/mro/.

[ANS thanks Joe, KM1P, the Mars-net list, and Uhf-satcom.com for the above information]

SB SAT @ AMSAT $ANS-352.05
ARISS Status for the week of December 12, 2005

AMSAT News Service Bulletin 352.05
From AMSAT HQ SILVER SPRING, MD.
December 18, 2005
To All RADIO AMATEURS
BID: $ANS-352.05

1. Texas Contact Successful

On Thursday, December 8, Sanderson High School in Sanderson, Texas experienced a successful contact with Bill McArthur, KC5ACR. Bill was able to answer 18 questions posed to him by 10 students, as an audience of approximately 25 students, teachers, parents, and others looked on. Local dignitaries who attended the event included the county judge and the county sheriff. Among the media that covered the contact were The Terrell County News Leader, The Davis Mountain Times (Fort Davis, TX), The Big Bend Sentinel (Alpine, TX) and The Alpine Avalanche (Alpine, TX).

2. Upcoming School Contacts

Mt Carmel High School in San Diego, California made a contact on Thursday, December 15 at 15:42 UTC via KG6EQU.

Carman Park Elementary School, a crew pick, located in Flint, Michigan, has been approved for an ARISS contact. It will take place on Wednesday, December 21 at 16:35 UTC via the telebridge station, WH6PN. The Carman Park contact will be webcast.
To join the event:
URL: <https://e-meetings.mci.com>
CONFERENCE NUMBER: 5169963
PASSCODE: SPACE STATIO

The audio will also be available through EchoLink AMSAT (node 101377) and EDU_Net (node 77992) conference room servers and will be broadcast into the IRLP Discovery Reflector 9010, with streaming audio available from the Discovery Reflector Web Site, http://www.discoveryreflector.ca/

3. McArthur Still Active on Voice

Over this past week, Bill McArthur, KC5ACR, made contacts with stations in the U.S. on December 6. He also spoke with stations in Australia, New Zealand and the U.S. on December 11.

4. Astronaut Training Status

Astronaut Michael Lopez-Alegria, who passed his amateur radio license exam on Wednesday, November 30 has been issued the callsign KE5GTK.

[ANS thanks Carol, KB3LKI for the above information]

SB SAT @ AMSAT $ANS-352.06
FM Satellites: Remember to Listen for N5AFV Aboard a Cruise Ship

AMSAT News Service Bulletin 352.06
From AMSAT HQ SILVER SPRING, MD.
December 18, 2005
To All RADIO AMATEURS
BID: $ANS-352.06

Allen, N5AFV is at sea in the Carribean with his FM satellite gear on a cruise ship sailing from Port Everglades, FL to the island of Dominica and back. He plans to work the FM birds AO-27, SO-50 and AO-51 using his Icom W32A HT and an AL800 telescoping antenna.

While Allen plans shipboard operation, and has done so successfully in the past, there is always the possibility that he will not be allowed to operate from the ship. If that happens, Allen will try to operate onshore at the ports of call where he can do so.

Itinerary
Dec 17, Leave Port Everglades, FL, 1700 EST
Call signs N5AFV and N5AFV/C6A
Dec 18, Nassau, Bahamas, 0800-1600 local time
Call sign N5AFV/C6A
Dec 19, At Sea
Call sign N5AFV/C6A
Dec 20, San Juan, PR, 1300-2300 local time
Call sign KP4/N5AFV
Dec 21, St. Thomas, USVI, 0800-1700 local time
Call sign KP2/N5AFV
Dec 22, Dominica, 1200-1900 local time

Call sign J79AFV
Dec 23, St. Barts, 0800-2300 local time
Call sign FJ/N5AFV
Dec 24, Tortolla, BVI, 0800-1500 local time
Call sign VP2V/N5AFV
Dec 25, At Sea
Call sign N5AFV/C6A
Dec 26, At Sea
Call sign N5AFV/C6A
Dec 27, Arrive Port Everglades, FL, 0700 EST
Call sign N5AFV

[ANS thanks Allen, N5AFV for the above information]

SB SAT @ AMSAT $ANS-352.07
First Announcement of January 2006 Amsat Kid's Day on AO-51

AMSAT News Service Bulletin 352.07
From AMSAT HQ SILVER SPRING, MD.
December 18, 2005
To All RADIO AMATEURS
BID: $ANS-352.07

January 2006 Amsat Kid's Day on AO-51

Amsat-NA, the AO-51 Command Team, and the AO-51 Operations Team will sponsor Kid's Day on AO-51 on January 8, 2006. The event will run from approximately 0100 UTC 8 January until 0345 UTC 9 January. The event is open to all kids, worldwide. We ask all amateur radio stations to give this short time window to promote satellite operations with kids, by actually showing a kid how to make contacts via AO-51, providing a station to contact, or stepping aside to allow others to make contacts with the kids. During the event, please limit contacts to stations that are operating with kids at the microphone. This should allow the kids to have a nice QSO and pass some information. Kids can tell their name, age, who is helping them operate on AO-51, where they live, and other information about themselves.

AO-51 will be configured in the following mode during the event. Please note the change in the uplink frequency for the event. The PL tone will be turned off for the event.

Uplink: 145.880 mhz FM voice
Downlink: 435.300 mhz FM voice

The digital transponder on 435.150 will be turned off during the event.

See http://www.arrl.org/FandES/ead/kd-rules.html on the ARRL website for more Kids Day information.

Have fun and enjoy AO-51!

The space shuttle crew placed PCSAT2 on one of the solar truss arms of
International Space Station.
It is undergoing tests, you can listen at 435.975 for 9600bps Packet
Telemetry. Also two tests on PSK31
are going to be done on passes over the USA at about 1540 UTC and 1715
UTC August 6, 2005.
Downlink for PSK31 is 435.275 FM +- Doppler (start at 435.278 and down
in 5 kHz steps as the pass
goes over your QTH. Messages about testing and other information is
posted on AMSAT-BB
by Bob Bruninga WB4APR on that mailing list about PCSAT2. Also
information at:
http://www.ew.usna.edu/~bruninga/pcsat2.html

Yes.

I made my first contacts using a DR-605 when I first got into the hobby.
You can have pretty good luck with a discone even.

just store them as an crossband odd split (display will end up showing +-). store it so you listen on 430Mc and TX on 145Mc. I programmed mine from the computer , but the manual does show how to do it. Just make sure you are courteous in suign this set up as realy the best way is to listen to yourslef on the downlink to make sure you are listenable and not just noise or talking over or interferieng with someone.

Gee, "yes" was a good answer, but my answer is much better

http://www.monitoringtimes.com/nasa.html

I did here from people in a few yahoo groups that they heard ops in the UHF
mil band on lift off well into the northern CONUS and even the UK

AMSAT NEWS SERVICE
ANS-219

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:
ans-editor@amsat.org

In this edition:

* AMSAT-NA Space Symposium Announcement
* PCSAT2 Installed and Activated on the ISS
* AMSAT-UK Reports PO-28 to Return to Amateur Satellite Service
* September 27 is the New Launch Date for SSETI
* Satellite DXpedition to JW-Svalbard Announced
* OSCAR-11 is Still Alive
* New OSCAR FM Help Page
* AMSAT-Argentina Unveils On-line Amateur Radio Calculator
* AMSAT Awards This Week
* ARISS Status for the week of August 1, 2005
* PCSAT2 Telemetry Guide

SB SAT @ AMSAT $ANS-219.01
AMSAT-NA Space Symposium Announcement

AMSAT News Service Bulletin 219.01
From AMSAT HQ SILVER SPRING, MD.
August 7, 2005
To All RADIO AMATEURS
BID: $ANS-219.01

Space! Ham radio goes there and you can join in the fun! Come to the AMSAT Technical Symposium and Annual Meeting this fall in lovely Lafayette, Louisiana. Education and technical sessions begin on Friday, the 7th of October. Technical, field ops, and the IARU forum follow through Sunday the 9th of October. Enjoy the best of Acadian Louisiana with Friday's "Shrimp Boil," Saturday's Banquet with great prizes, and Sunday's "Swamp Tour."

Register on line! For more, see:
http://www.amsat.org/amsat-new/symposium/.

[ANS thanks the AMSAT Symposium team for the above information]

/EX

SB SAT @ AMSAT $ANS-219.02
PCSAT2 Installed and Activated on the ISS

AMSAT News Service Bulletin 219.02
From AMSAT HQ SILVER SPRING, MD.
August 7, 2005
To All RADIO AMATEURS
BID: $ANS-219.02

PCSAT2 was installed on the exterior of the International Space Station and was activated on August 3, 2005.

The PCSAT2 mission is intended as an opportunity to augment existing ARISS communications experiments with an external autonomous communications payload. In this regard, it has several potential uses:

* A UI-Digipeater to help ease congestion on the currently shared ARISS PMS (Packet Mail system)

* A PSK-31 transponder for multi-user communications to improve accessibility for schools and ARISS outreach programs.

* An FM Voice repeater for full duplex crew communications to facilitate crew-to-school ARISS contacts.

* Routine Telemetry on the spacecraft systems

The current mode available for amateur radio use activated on August 3 includes 1200 and 9600 baud telemetry on 437.975 +/- 9 KHz of Doppler shift. Conventional 1200 baud APRS IGate stations are encouraged to tune over to the downlink and feed anything you capture.

9600 baud capable stations are encouraged to capture the special 9600 baud downlink and email to PC2@grc.nasa.gov and if they have IGate software (or the latest ALOGGER 2.0.2) to feed it live to: satgate.aprsca.net port 20150. (ALOGGER2.02 is available from: http://www.billdiaz.dynip.com/)

Please, no transmissions on the uplink. The PCSAT2 Team will announce when the satellite is open for general use in a few weeks.

The PCSAT2 web pages are temporarily unavailable because the server at the U.S. Naval Academy is without power for several days. When this server is restored see:
http://web.usna.navy.mil/~bruninga/pcsat2.html

An on-line overview of PCSAT2 telemetry can be found at:
http://www.pcsat2.info

1200 baud telemetry is just an occasional packet every 10 or 60 seconds. 1200 baud stations can simply feed their downlinks directly into the global APRS system like normal. These will help update the LIVE PCSAT2 telemetry page by G4DPZ at:
http://www.pcsat2.info/PCSat2Web/RealTime.jsp

PCSAT2 was mentioned at SlashDot ...
http://science.slashdot.org/science/05/08/04/0053242.shtml?tid=160&tid=126

Packets seen from PCSAT2 can be reviewed at:
http://www.findu.com/cgi-bin/pcsat2.cgi

A screen shot of both the 9600 bps and 1200 bps decoded data as seen by Simon, 9W2QC, can be seen at:
http://www.9w2qc.net/pcsat2/

Tuning hints for doppler shift: At AOS the UHF signal from PCSAT2 will be as much as 9 KHz high and at LOS will be as much as 9 KHz low. But at these times the doppler is *changing* the least and this is probably the best time to catch a complete file without any tuning glitches.

In the middle of the pass, the Doppler rate of change is the highest and although the signal will be strongest, over the center 2 minutes the doppler will shift as much as 8 KHz! This is why we expect to have to combine files from multiple users to get a complete set of data.

[ANS thanks Bob, WB4APR, and Dave, G4DPZ for the above information]

AMSAT-UK Reports PO-28 to Return to Amateur Satellite Service

AMSAT News Service Bulletin 219.03
From AMSAT HQ SILVER SPRING, MD.
August 7, 2005
To All RADIO AMATEURS
BID: $ANS-219.03

PO-28 (POSAT-1), Portugal's first satellite, launched 12 years ago, will be turned over to Amateur Radio use in the very near future. That was the word July 30 from AMSAT-UK Secretary Jim Heck, G3WGM, during the AMSAT-UK International Space Colloquium in Guildford, England.

Launched September 25, 1993, the satellite operated as a packet store-and-forward BBS (9600 baud FM FSK) on Amateur Radio frequencies for several weeks in early 1994. Over the years, PO-28's primary usage has been commercial, although plans have called for eventually shifting its operation to ham radio use. G3WGM reports that following lengthy negotiations it has been agreed that the satellite can be switched permanently to amateur frequencies. The changeover is expected to take a couple of weeks.

The Portuguese satellite was built at the University of Surrey as part of a collaborative satellite technology program that involved industry and academe. Uplink frequencies will be 145.925 and 145.975 MHz. Downlink frequencies will be 435.250 and 435.275 MHz. More information on PO-28 is on the AMSAT Web site http://www.amsat.org/amsat/sats/n7hpr/po28.html.

Uplink Frequencies: 145.925 and 145.975 MHz
Downlink Frequencies: 435.250 and 435.275 MHz

Orbit: 822 x 800 km, 98.6 deg inclined, sun-synchronous.

Transponder capabilities include FM repeater and 38k4 data. If you want to hear how loud this satellite is, listen on 429.950 until the change back to amateur radio service.

Keplerian elements for PO-28 are not currently contained in the AMSAT keps bulletins, but can be found at Celestrak in amateur.txt using the name "POSAT". Users of Space Track should query the NORAD Satellite ID number 22829. The name listed by Space Track is "EYESAT A".

[ANS thanks Jim, G3WGM, Trevor, M5AKA, and the ARRL Letter for the above information]

Satellite DXpedition to JW-Svalbard Announced

AMSAT News Service Bulletin 219.05
From AMSAT HQ SILVER SPRING, MD.
August 7, 2005
To All RADIO AMATEURS
BID: $ANS-219.05

Howard Long, G6LVB, will be travelling to Svalbard (JW prefix, 78.15 deg N, 16.02 deg E) around the 26, 27 and 28 August timeframe. The main purpose of the trip will be to install upgrades to a satellite station at www.svalsat.com. Howard intends to bring LEO satellite gear with him.

Due to its northerly location, Svalbard has coverage to Canada and the North Eastern US as well as Japan.

Howard states, "I will definitely be active on AO-51, SO-50, AO-27, PO-28 (let's hope) and if I have room for SSB equipment I will operate FO-29, VO-52 and possibly AO-7. The ISS never travels far enough North for me to take a shot at it. There are no plans to take any HF gear."

[ANS thanks Howard, G6LVB, for the above information]

OSCAR-11 is Still Alive

AMSAT News Service Bulletin 219.06
From AMSAT HQ SILVER SPRING, MD.
August 7, 2005
To All RADIO AMATEURS
BID: $ANS-219.06

Clive Wallis wrote, "Very many thanks for all the recent reports of OSCAR-11, on AMSAT-BB and by direct e-mails. I received the good news, on Saturday morning, while at the AMSAT-UK Colloquium. This was entirely unexpected!

When I returned home on Sunday, I heard the passes at 17:21 & 19:02 UTC, and have heard many others since.

Signals seem to be weaker than usual. However,since I last heard the satellite on 30 April, I've reinstalled my antennas , which makes comparisons difficult.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working. One bit in channel 62, DSR mode, has changed from WRITE to READ. DSR is the Digital Store & Readout experiment. This could be significant if the experiment is still drawing current, but the other status bit indicates thet it is switched OFF.

The on-board clock is now showing a very large error. It has lost approximately 15 days since 30 April. I'll be monitoring the clock closely to see whether it changes at a constant rate, in future passes.

Eclipses should end around mid August. That should help the satellite to continue transmitting.

If the watchdog timer is still working, the satellite should switch OFF in the next 10 to 20 days. I would appreciate if listeners could just make a note of the DATE & UTC time when they hear the satellite, so that when it switches OFF we can determine when it was last heard. Please post your reports to AMSAT-BB or e-mail me direct g3cwv@amsat.org, but NOT until it switches OFF!

[ANS thanks Clive, G3CWV, for the above information]

ARISS Status for the week of August 1, 2005

AMSAT News Service Bulletin 219.10
From AMSAT HQ SILVER SPRING, MD.
August 7, 2005
To All RADIO AMATEURS
BID: $ANS-219.10

ARISS Status for the week of August 1, 2005

1. SuitSat Status
The ARISS-Russia team requested that a few fabric ARISS logo patches be provided to place on the bags which will contain the SuitSat hardware during flight. The U.S. team ordered and received the patches and will deliver these to Sergey Samburov at the U.K. meeting. Integration and testing continue as the team works on the hardware flight certification.

2. PCSAT2/MISSE5 Delivered to ISS
PCSAT2 flew on the Return to Flight STS-114 mission, which launched Tuesday, July 26. It was deployed during the third EVA on August 3. An on-orbit checkout needs to be performed before it becomes available to users on the ground. This may take a week or two. The project is described in detail on Bruninga's website, "PCSAT2 - External ISS Experiment in the Amateur Satellite Service." See the site for updates and telemetry data. (Occasional outages of this server may occur, please re-try later if you are not successful.)
http://www.ew.usna.edu/~bruninga/pcsat2.html

3. ARISS International Meeting, Guildford, U.K.
The AMSAT-UK Colloquium was held at the University of Surrey in Guildford, U.K. on Friday, July 29 through Sunday, July 31. The ARISS International Meeting convened August 1 - 2. Information on both meetings may be found on the following website:
http://www.uk.amsat.org/Colloquium/default.php

SB SAT @ AMSAT $ANS-219.11
PCSAT2 Telemetry Guide

AMSAT News Service Bulletin 219.11
From AMSAT HQ SILVER SPRING, MD.
August 7, 2005
To All RADIO AMATEURS
BID: $ANS-219.11

Bob Bruninga, WB4APR, of the U.S. Naval Academy Satellite Lab, the developers of PCSAT2 released a preliminary guide for the reading and understanding of the PCSAT2 telemetry.

Here is what to look for on the PCSAT2 telemetry screen. Dave, G4DPZ, has done an *fantastic* translation of the original DOS version of PCSAT2 telemetry decoder to a real-time web format:

http://www.pcsat2.info/PCSat2Web/RealTime.jsp

The telemetry is in 4 packets, numbered 00,01,10,11. That is why every telemetry channel has one of those numbers by it so you can see which packet contains which value. They are transmitted every 10, or 20, or 60 seconds depending on the rate we need to receive the telemetry. This means it can take 40 sec, or 1 min 20s or 4 minutes to get a complete snapshot.

The upper right shows the TIME of each of these 4 packets last heard. Colors show latency. Brighter colors are more recent. Every packet has a serial number which is incremented each packet.

The raw packet is at the top and you can see the SOURCE callsign of who IGAted it into the network.

Transmitters are bursty packet types and usually will show 0 since it is rare to capture a 1 second current when the telemetry samples. Looking at the temperature of the transmitter gives a better indication of how hard it is working.

Remember PCSAT2 has no command/control processor. It is only a pair of KPC-9612+ TNC's and we are only using their built-in telemetry and command capability.

You can look at the eight 11111111 bits in EVERY telemetry packet (they are the same) which shows the state of the 8 on/off bits. They are active LOW. So 11111111 means everything is off. They are mostly identical on the A and B side. Each bit is listed at the bottom of the page under "Command Status".

The upper right shows the estimated Latitude/Longitude of the real-time position of ISS NOW (not when the telemety sample was taken).

[ANS thanks Bob, WB4APR, for the above information]

AO-51 ECHO
Catalog number: 28375

Launch date: June 29, 2004

Status: Testing
Curent Mode: PBBS - OFF
FM REPEATER - V/U HIGH POWER

Analog voice downlink: 435.300 MHz FM
435.150 MHz FM
Analog voice uplink: 145.880 MHZ FM
145.920 MHz FM 67Hz PL tone
1268.700 MHz FM 67Hz PL tone

Digital Downlinks: 435.150 MHz FM, 38k4 Digital, PBP, 1 watt output
2401.200 MHz FM 38k4 bps, AX.25
Digital Uplink: 145.860 MHz FM, 9k6 Digital, Pacsat Broadcast Protocol (PBP)

Broadcast: PECHO-11
BBS: PECHO-12

Current scheduled operating modes:

15 Aug
FM Repeater, V/S
Uplink: 145.920 mhz FM, 67hz PL Tone
Downlink 2401.200 mhz FM

22 Aug
FM Repeater, V/U
Uplink: 145.920 mhz FM, 67 hz PL Tone
Downlink 435.300 mhz FM
9k6 Digital, V/U, PBP BBS (Pacsat Broadcast Protocol BBS)
Uplink: 145.860 mhz FM, 9k6 PBP Digital
Downlink: 435.150 mhz FM, 9k6 PBP Digital

[07312005]

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that SO-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz. The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm
   the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT
   the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window
   will reset the 10 minute timer.

[09122004]

=====
FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

John, N4QWL reports on July 16th, 2005:

Last evening I had a AOS to LOS qso with WI2W. FO-29 came up at 01:17z here in FM07 and I found WI2W and we chatted until 01:33z. The satellite was at 2 degrees elevation when I finally heard him start to crackle a bit. What a great QSO! To think that I watched this bird launch back in 1996 and it is still working so well is a real thrill. I believe I still have the video. I might just look for it and watch it again. Boy do I love this satellite stuff!
Look for you all up there.

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will automatically analyze all digital telemetry from the satellite (such as current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[ANS-WSR wishes to thanks John, N4QWL for this week's report]

[07172005]

=====
AO-27 AMRAD
Catalog number: 22825
Launched: September 26, 1993

Status: Operational

Uplink: 145.850 MHz FM
Downlink: 436.795 MHz FM

The latest information on AO-27 from control operator Michael Wyrick, N3UC (former N4USI), can be found at:
http://www.ao27.org

An AO-27 question-and-answer page is available on the AMSAT-NA web site, with updates by Ray, W2RS. The URL is:
http://www.amsat.org/amsat/intro/ao27faq.html

[ANS-WSR thanks John, K6YK, for this week's AO-27 report]
[08292004]

=====

AO-7 AMSAT OSCAR 7

Catalog number: 07530
Launch Date: November 15, 1974

Status: Semi-operational in sunlight.
Return to active status: June 21,2002

```
Uplink:     145.850 to 145.950 MHz CW/USB Mode A
            432.125 to 432.175 MHz CW/LSB Mode B
Downlink:    29.400 to  29.500 MHz CW/USB Mode A
            145.975 to 145.925 MHz CW/USB Mode B
Beacon:     29.502 MHz, 145.972 MHz, 435.1 MHz, 2304.1 MHz
```

Emily, W0EEC has created a website to allow the users of AO-7 to record contacts, observations and use of the satellite more effectively at:
http://www.emilyshouse.com/experthams/ao7/main.php
This includes the ability to log contacts.

Tim, K3TZ has written a program to decode AO-07 telemetry.
The program can be downloaded at:
http://www.qsl.net/k3tz/files/K3TZ_AO-07_Telemetry_Decoder_0.5.zip

For more AO-7 info:
http://www.amsat.org/amsat/sats/n7hpr/ao7.html

=====

INTERNATIONAL SPACE STATION (ISS) - ARISS

Catalog number: 25544
Launch date: November 20, 1998

Status: Operational
Current Mode: U/V CROSS-BAND REPEATER
Digipeater: Inactive

The current Expedition 11 crew is:
Commander Sergei Krikalev
Flight Engineer John Phillips

Worldwide packet uplink: 145.990 MHz FM
Region 1 voice uplink: 145.200 MHz FM
Region 2/3 voice uplink: 144.490 MHz FM
Worldwide downlink: 145.800 MHz FM

Repeater Uplink: 437.800 MHz FM
Repeater Downlink: 145.800 MHz FM
Doppler Shift is 10 KHz

Russian callsigns: RS0ISS, RZ3DZR
USA callsign: NA1SS
Packet station mailbox callsign: RS0ISS-11
Packet station keyboard callsign: RS0ISS-3
Digipeater callsign: ARISS

This off the ARISS webpage:
http://www.rac.ca/ariss/oindex.htm#New%20ARISS%20Operations :
The ARISS program is pleased to announce that the amateur radio equipment aboard the International Space Station is now operating in cross-band repeat mode. We realize that many of you will miss the packet-operating mode. However, cross-band repeat allows further experimentation of the ISS amateur radio system

The downlink for this operating mode remains the same, so listen for the station on 145.80 MHz. The new uplink frequency is 437.80 MHz. All frequencies are subject to Doppler shifting. For further information on working satellites and adjusting for Doppler shift, please review Emily Clark's (W0EEC) excellent presentation on AMSAT's website:
http://www.amsat.org/amsat-new/information/faqs/Intro_sats.pdf

The ISS daily crew schedule can be found at:
http://spaceflight.nasa.gov/station/timelines/
Remember that the crew operates on UTC time. Also, all of the time line is NOT translated from Russian and posted.

NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Non-Operational?????

Uplink/downlink: 145.827 MHz 1200 baud AX.25 AFSK via W3ADO-1
Aux/Uplink: 435.250 MHz 9600 baud via PCSAT-2 (off)
APRS Downlink: 144.390 MHz (Region 2)

PCSat is a 1200-baud APRS digipeater designed for use by stations using hand-held or mobile transceivers. Downlinks feed a central web site at: http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy under the guidance of Bob Bruninga, WB4APR.
[07242005]

=====

CUTE-1
Catalog number: 27844
Launched: June 30,2003

Status: Operational

Uplink: ?
Downlink: 436.8375 CW
437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ?)
Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as OPERATIONAL?
Indeed it is very operational as a CUBESAT sending CW telemetry on 436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at 14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz. Initial orbital parameters were period 101.4 min, apogee 831 km, perigee 819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

[ANS WSR wishes to thank Cliff, K7RR, for this week's information]

=====

UO-11 OSCAR-11
Catalog number: 14781
Launched: March 1, 1984

Status: Semi-operational?

Telemetry Downlink: 145.826 MHz. FM (1200-baud AFSK).

approx. 10 days ON, 10 days OFF
Mode-S Beacon: 2401.500 MHz. ... OFF
UHFBeacon: 435.025 MHz. ... OFF

Clive Wallis wrote, "Very many thanks for all the recent reports of OSCAR-11, on AMSAT-BB and by direct e-mails. I received the good news, on Saturday morning, while at the AMSAT-UK Colloquium. This was entirely unexpected!

When I returned home on Sunday, I heard the passes at 17:21 & 19:02 UTC, and have heard many others since.

Signals seem to be weaker than usual. However,since I last heard the satellite on 30 April, I've reinstalled my antennas , which makes comparisons difficult.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working. One bit in channel 62, DSR mode, has changed from WRITE to READ. DSR is the Digital Store & Readout experiment. This could be significant if the experiment is still drawing current, but the other status bit indicates thet it is switched OFF.

The on-board clock is now showing a very large error. It has lost approximately 15 days since 30 April. I'll be monitoring the clock closely to see whether it changes at a constant rate, in future passes.

Eclipses should end around mid August. That should help the satellite to continue transmitting.

If the watchdog timer is still working, the satellite should switch OFF in the next 10 to 20 days. I would appreciate if listeners could just make a note of the DATE & UTC time when they hear the satellite, so that when it switches OFF we can determine when it was last heard. Please post your reports to AMSAT-BB or e-mail me direct g3cwv@amsat.org, but NOT until it switches OFF!

[ANS-WSR thanks Clive, G3CWV, for the above information]

SB SAT @ AMSAT <KB9MMC $ANS-219.S3
WSR 219 Part 3 08/07/2005

AMSAT NEWS SERVICE BULLETIN 219.S3 FROM AMSAT HQ

SILVER SPRING, MD, AUGUST 7, 2005
TO ALL RADIO AMATEURS
BID: $ANS-219.S3

THE FOLLOWING ARE IN ORBIT BUT ARE
NON-OPERATIONAL AT THIS TIME:

POSAT-1 PO-28
Catalog Number: 22829
Launched : September 25, 1993

Status: Operational - Not open for Amatuer use

Downlink: 435.250 MHz
          435.275 MHz

Uplink: 145.925 MHz
          145.975 MHz

Broadcast callsign: POSAT1-11
BBS callsign: POSAT1-12

PO-28 (POSAT-1), Portugal's first satellite, launched 12 years ago, will be turned over to Amateur Radio use in the very near future. That was the word July 30 from AMSAT-UK Secretary Jim Heck, G3WGM, during the AMSAT-UK International Space Colloquium in Guildford, England.

Launched September 25, 1993, the satellite operated as a packet store-and-forward BBS (9600 baud FM FSK) on Amateur Radio frequencies for several weeks in early 1994. Over the years, PO-28's primary usage has been commercial, although plans have called for eventually shifting its operation to ham radio use. G3WGM reports that following lengthy negotiations it has been agreed that the satellite can be switched permanently to amateur frequencies. The changeover is expected to take a couple of weeks.

The Portuguese satellite was built at the University of Surrey as part of a collaborative satellite technology program that involved industry and academe. Uplink frequencies will be 145.925 and 145.975 MHz. Downlink frequencies will be 435.250 and 435.275 MHz. More information on PO-28 is on the AMSAT Web site http://www.amsat.org/amsat/sats/n7hpr/po28.html.

Uplink Frequencies: 145.925 and 145.975 MHz
Downlink Frequencies: 435.250 and 435.275 MHz

Orbit: 822 x 800 km, 98.6 deg inclined, sun-synchronous.

Transponder capabilities include FM repeater and 38k4 data. If you want to hear how loud this satellite is, listen on 429.950 until the change back to amateur radio service.

Keplerian elements for PO-28 are not currently contained in the AMSAT keps bulletins, but can be found at Celestrak in amateur.txt using the name "POSAT". Users of Space Track should query the NORAD Satellite ID number 22829. The name listed by Space Track is "EYESAT A".

More information of POSAT-1 can be found at:
http://www.ee.surrey.ac.uk/SSC/CSER/UOSAT/missions/posat1.html
http://www.amsat.org/amsat/sats/n7hpr/po28.html
[ANS-WSR wishes to thanks Trevor, M5AKA and Jim, G3WGM, for this week's information.]

PO-34 PANSAT
Catalog number: 25520
Launched: October 30, 1998

Status: Telemetry downloads only

Uplink/downlink frequency (listed on the PanSat web site) 436.500 MHz

The satellite is not available for general uplink transmissions.

The Naval Postgraduate School developed PanSat. At the time of launch, PanSat spread-spectrum digital transponders were to be available to Amateur Radio operators along with software to utilize this technology.

The satellite is still operating, however, the spread spectrum packet radio portion never took place. The spacecraft is now beyond it's initial 2-year mission life, but telemetry records are still being downloaded.

For more information, visit the official PanSat web site at:
http://www.sp.nps.navy.mil/pansat/
[05092004]

=====

SO-33 SEDSAT-1
Catalog number: 25509
Launched: October 24, 1998

Status: Semi-operational

Downlink: 437.910 MHz FM (9600-baud FSK)

The satellite is not currently available for uplink transmissions and

the image and transponder recovery efforts have been unsuccessful.

For more information on SedSat-1 visit the satellite web site:
http://seds.uah.edu/projects/sedsat/sedsat.htm

[ANS has no further information]
[05232004]
=====

=====
AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.
```

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio anand telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at: http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

WSR 219 Part 4 08/07/2005

AMSAT NEWS SERVICE BULLETIN 219.S4 FROM AMSAT HQ
SILVER SPRING, MD, AUGUST 7,2005
TO ALL RADIO AMATEURS
BID: $ANS-219.S4

THE FOLLOWING SATELLITES ARE NOT IN ORBIT BUT ARE PROPOSED FOR LAUNCH AT THIS TIME:

UCISAT ?O-??
Catalog number:
Proposed Launch Date: October 31, 2005

Status: Under Construction

Downlink: Submission in Progress
Uplink: Submission in Progress

Callsign: Submission in Progress

This from Matt Bennett, KF6RTB, UCISAT Communications Team Member:

Our website is www.ucisat.net .This is a new website, however, and doesn't have the "Status" section active yet. Because of the growing interest in our project, I'll push our webmaster to create updates (hopefully) on a week-to-week basis. For now, the current status of the mission is as follows:

-Expected Launch Date: October 31st, 2005
-Frequency Allocation: Submission in Progress
-Construction Status: Sub-Assembly
[WSR to thank Matt Bennett, KF6RTB, for this week's report.]
[01302005]
=====
SSETI ?O-??
Catalog Number:
Proposed Launch Date: LATE 2005

Status: AWAITING LAUNCH

Graham, G3VZV reports:
We have now been advised that the revised launch date for SSETI Express and the other satellites on the DMC3 COSMOS launch has been confirmed as September
27th - so please keep those fingers crossed!

SpaceDaily has a report about SSETI at:
http://www.spacedaily.com/news/internet-04zzzu.html

You can find more info about SSETI at:
http://sseti.gte.tuwien.ac.at/WSW4/

Looking at the website for the SSETI Express webcam
http://sseti.gte.tuwien.ac.at/WSW4/webcam.htm

[ANS thanks Graham, G3VZV for the above information]
[07312005]
=====
PCSAT2 ?0-??
Catalog Number:
Proposed Launch Date: August 1, 2005

Status: Onboard International Space Station

PCSAT2 was installed on the exterior of the International Space Station and was activated on August 3, 2005.

The PCSAT2 mission is intended as an opportunity to augment existing ARISS communications experiments with an external autonomous communications payload. In this regard, it has several potential uses:

* A UI-Digipeater to help ease congestion on the currently shared

ARISS PMS (Packet Mail system)

* A PSK-31 transponder for multi-user communications to improve accessibility for schools and ARISS outreach programs.

* An FM Voice repeater for full duplex crew communications to facilitate crew-to-school ARISS contacts.

* Routine Telemetry on the spacecraft systems

The current mode available for amateur radio use activated on August 3 includes 1200 and 9600 baud telemetry on 437.975 +/- 9 KHz of Doppler shift. Conventional 1200 baud APRS IGate stations are encouraged to tune over to the downlink and feed anything you capture.

9600 baud capable stations are encouraged to capture the special 9600 baud downlink and email to PC2@grc.nasa.gov and if they have IGate software (or the latest ALOGGER 2.0.2) to feed it live to: satgate.aprsca.net port 20150. (ALOGGER2.02 is available from: http://www.billdiaz.dynip.com/)

Please, no transmissions on the uplink. The PCSAT2 Team will announce when the satellite is open for general use in a few weeks.

The PCSAT2 web pages are temporarily unavailable because the server at the U.S. Naval Academy is without power for several days. When this server is restored see:
http://web.usna.navy.mil/~bruninga/pcsat2.html

An on-line overview of PCSAT2 telemetry can be found at:
http://www.pcsat2.info

1200 baud telemetry is just an occasional packet every 10 or 60 seconds. 1200 baud stations can simply feed their downlinks directly into the global APRS system like normal. These will help update the LIVE PCSAT2 telemetry page by G4DPZ at:
http://www.pcsat2.info/PCSat2Web/RealTime.jsp

PCSAT2 was mentioned at SlashDot ...
http://science.slashdot.org/science/05/08/04/0053242.shtml?tid=160&tid=126

Packets seen from PCSAT2 can be reviewed at:
http://www.findu.com/cgi-bin/pcsat2.cgi

A screen shot of both the 9600 bps and 1200 bps decoded data as seen by Simon, 9W2QC, can be seen at:
http://www.9w2qc.net/pcsat2/

Tuning hints for doppler shift: At AOS the UHF signal from PCSAT2 will be as much as 9 KHz high and at LOS will be as much as 9 KHz low. But at these times the doppler is *changing* the least and this is probably the best time to catch a complete file without any tuning glitches.

In the middle of the pass, the Doppler rate of change is the highest and although the signal will be strongest, over the center 2 minutes the doppler will shift as much as 8 KHz! This is why we expect to have to combine files from multiple users to get a complete set of data.

[ANS thanks Bob, WB4APR, and Dave, G4DPZ for the above information]

[08072005}
=====
PHASE 3E ?O-??
Catalog Number:
Proposed Launch Date: Early 2006

Status: Under Construction

William Leijenaar, PE1RAH reports on July 16th, 2005:

Hi AMSATs,

I always like to inform the AMSATs public about my P3e work, but unfortunatly due to
some reasons there was not much time and nothing much to say...

However, now I am happy to announce that the my MODE-UV transponder design for P3e is ready at the P3e integration place in Marburg (Germany). About 4 weeks ago I was in Marburg before, where the transponder has been checked. Unfortunatly some unsure things were found in the design. The unsure things were about long term stability after many years in space.

At home in The Netherlands, I changed the design with some minor changes to have a secure long term stability. Finally I tested the transponder again and it performed well within the specifications. Again something learned for future transponder designs :o)

Last Wednesday I drove to AMSAT-DL P3e integrations place in Marburg again, and have my transponder again checked. In the beginning it seemed that the 70cm receiver lost 10dB in sensetivity. After some more measurements we find out that it was due to a bad attenuator we used for protection at the input.

Together with Karl Meinzer we looked for any problems, but so far we could see (without HELAPS) all was okay. In the afternoon I went back home again, this time without the MODE-UV.

Now the MODE-UV will get a new home, the home of P3e... :o)
I hope the transponder will work like its elder sister in AO-10, and you all will enjoy it for many years...

It was lots of work to get it this far, but I know it is for a good purpose...

For the latest project status update please visit the AMSAT-DL

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
        888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satelite Report Editor is James K. Darrow, KB9MMC.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the
memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen,
G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:
ans-editor{at}amsat.org

Sorry, I have asked everywhere else, so are trying another method.

Does anyone reading this list have a reference to the invention of the Y-factor method of measuring noise figure of RF/microwave devices? Any idea why it is called "Y-factor"? I'd like to find the oringinal rreference, but so far have been unable to.

It is well explained in HP/Agilent application notes, but no reference is made to the first publication of it.

Does anyone have any old references that mention the method, even if they don't reference it? Anything earlier than the mid 1950's?

If you do, please drop me an email at the address in the jpeg below.

Have you checked the MIT Radiation Lab series of text books covering radar
from WWII ?  Seem to remember that was where I looked for authoritative
guidance when I made my noise measurements - back in 1965.
```

Was it J. D. Kraus? When I performed Y-factor tests in the '70s, his works were always at hand.

Any plans to put a repeater on the moon now that we are going back to the moon?

[snip]

Details about Project Moonray

Nick thought of the idea of putting an amateur repeater on the moon in 1965 while the Apollo manned lunar explorations were taking place. He met with Owen Garriott, W5LFL, who was an astronaut in training. Owen was scheduled to go to the moon on the forthcoming Apollo 18 mission. Nick gave this amateur project the name Moonray, which was short for moon relay. The idea that he proposed to NASA and was accepted by them was to build a package small enough to fit under the seat of the Lunar Rover vehicle. It would fit in a space vacated by the exchange of batteries with fuel cells. Hopefully, Owen would be the driver of this vehicle and he would have been the person to erect the Moonray package on the surface of the moon. There was to have been a connector on the Moonray package so that Owen could plug in his spacesuit headset and make a few contacts with hams on Earth. He would have then left the assembled package on the moon operating as an open amateur repeater.

Nick planned to build a thermonuclear powered (50 WATT DC output) Plutonium 235 fueled unit with a half-life of 97 years. It was to be a 5 pound repeater package with a 432 MHz uplink receiver and 1296 MHz 3.5 watt output downlink transmitter. The repeater was to accept all modulation modes at the input and linearly translate these to the downlink transmitter. The repeater also was to have contained several interesting amateur experiments including a laser receiver, a slow-scan color TV system giving gross cloud cover pictures of the earth several times a day, and a 32 channel telemetry link to transmit a variety of experimental and housekeeping data.

The call SS in Morse code was to be the identifier and had been allocated and approved by the FCC. NASTAR's ground station was to be the secondary control link to turn the repeater on or off as needed, and the giant dish at Arecibo was to be the primary control in emergency or during unexpected repeater malfunctions.

Unfortunately, Congress cut off funding to NASA for all future Apollo missions and Project Moonray was shelved.

Nick was again president of Project OSCAR from 1994 until his death in January, 1996. He was going to present a new version of Project Moonray to the opening meeting of the 50MHz and Up Group of N. California but he passed away 3 days before the meeting took place.

[end snip]

Tom

I've no idea. I have not looked at all the references that I have been
given, but so far have been unable to resolve it. I need to spend longer
in the library.

AMSAT NEWS SERVICE
ANS-226

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:

ans-editor@amsat.org

In this edition:

- ISS PCSAT2 PSK-31
- PCSAT2 Telemetry
- ARISS Status
- MRO Electra SDR
- AMSAT Awards

SB SAT @ AMSAT $ANS-226.01
ISS PCSAT2 PSK-31 Transponder is enabled

AMSAT News Service Bulletin 226.01
From AMSAT HQ SILVER SPRING, MD.
Aug 14, 2005
To All RADIO AMATEURS
BID: $ANS-226.01

PCSAT2 will operate in conjunction with all of the other exciting modes on the ARISS system such as voice, packet, repeater and SSTV modes. But because these are all multiple transceivers all on the same station, their operation have to be coordinated so there is no mutual interference.

It looks like PCSAT2 can best contribute at this time by operating in PSK-31 mode for the near future. This is a very exciting new transponder mode which solves the congestion problem on FM repeaters by letting multiple stations all communicate at the same time.

PSK-31 users are welcome to try out the new PCSAT2 PSK-31 transponder on ISS with an uplink on 29.402 +/- 1 KHz and downlink on 435.275 +/- Doppler using FM.

The FM downlink lets everyone operate full duplex and everyone to see the same view of the passband as everyone else. Thus you can see exactly what your signal looks like compared to everyone else.

Help Wanted: PCSat2 PSK-31 Operations Coordinator Needed

To save power and to avoid any potential interferece to any ISS School contacts, the PSK-31 transponder is only on when a responsible PC2PSK control station in the ISS/PCSat2 footprint turns it on.

If you are interested in PSK-31 operations and want to volunteer to coordinate all the other operators and operations, then we have a job for you. This PSK-31 operations coordinator, who has become fully familiar with ARISS operations, can next start to organize the pass-by-pass PSK-31 control ops.

Contact Bob Bruninga, WB4APR, at wb4apr@amsat.org if you wish to volunteer as the PCSat2 PSK-31 coordinator. Until the PCSat2 team is able to introduce the new coordinator please do not volunteer as a pass control operator.

Refer to this page:
http://www.ew.usna.edu/~bruninga/pec/pc2ops.html

For information about the PCSat2 PSK-31 transponder and a diagram
showing a basic configuration for PSK-31 earth stations.

[ANS thanks Bob, WB4APR and the U.S. Naval Academy Satellite Lab
for the above information.]

SB SAT @ AMSAT $ANS-226.02
PCSAT2 Telemetry

AMSAT News Service Bulletin 226.02
From AMSAT HQ SILVER SPRING, MD.
Aug 14, 2005
To All RADIO AMATEURS
BID: $ANS-226.02

The PCSat2 team sends a, "Thank You!", to all of the AMSAT and APRS stations feeding science and telemetry data from 437.975 to the APRS-IS. This data feeds the live telemetry page and lets everyone see how the spacecraft is doing around the world:

http://www.pcsat2.info

We do, of course, need more stations feeding telemetry, especially from those stations in unusual footprints such as Hawaii and remote areas of the USA, Europe and downunder. More stations capable of receiving and forwarding 9600 baud data would be especially helpful.

The PCSat2 telemetry team plans to write-up a set of turn-key instructions on how to set up a satgate so that others not familiar with APRS can easily join this satgate network. In the interim, stations that wish to experiment and learn can begin using any version of APRS or download the stand-alone ALOGGER 2.02 program from http://www.billdiaz.dynip.com/.

To set up a satgate, just tune a radio and TNC to one of these channels:

437.975 9600 bd for PCSAT2 data
437.975 1200 bd for PCSAT2 telemetry
145.800 for ARISS packet data
145.825 for the original PCsat

You will need to run your favorite APRS software and connect to satgate.aprsca.net:10150. ALOGGER, mentioned previously now has serial port support for a TNC as a satgate monitoring station.

For the overall PCSAT2 Operations system, see

http://www.ew.usna.edu/~bruninga/pec/pc2ops.html

[ANS thanks Bob, WB4APR and the U.S. Naval Academy Satellite Lab for the above information.]

ARISS Contact Schedule and Successful school list updated
2005-08-11 23:00 UTC

Well done STS-114! Welcome back!

Due to the STS-114 operation and planned ISS EVAs, ARISS school contacts were canceled or postponed. We are back, the next contact is set for 2005-08-17.

There was also a rumor that the ISS was having contacts on the 40 meter band. There is no HF equipment available yet.

Expedition 11 crew is now on the ISS. John Phillips KE5DRY
Sergei Krikalev U5MIR

Expedition 12 crew is expected to dock 2005-10-03. This means that there will probably not be any ARISS contacts from the week before docking until the week of 2005-10-24.

Expedition 12

William McArthur, KC5ACR up on 11S Soyuz, scheduled launch 2005-10-01
Valery Tokarev up on 11S Soyuz, scheduled launch 2005-10-01
Thomas Reiter DF4TR up on STS-121, scheduled launch 2005-09-22

The schedule page has been updated as of 2005-08-11 23:00 UTC.

Look for the updated and enhanced frequency chart for packet, voice, and crossband repeater modes showing Doppler correction.

http://www.amsat.org/amsat/ariss/news/ISS_frequencies_and_Doppler_correction.rtf

Several schools will be live simulcasted via the world wide web. Check out the instructions for each school on the schedule page to get to the audio streaming.

Additional instructions have been added on how to listen in when the streaming audio is provided by MCI.

Also, please monitor the IRLP and Echolink webpages for possible upcoming contacts that will be simulcast.

IRLP website at:

http://www.discoveryreflector.ca

This new site will have the links for simulcast contacts that have IRLP and Echolink.

The successful school list has been updated as of 2005-07-21 04:00 UTC.

Check out the link on the schedule page to download a video that Mike Fincke KE5AIT and Gennady Padalka RN3DT have produced of life on the ISS.

The latest ARISS application, announcement and successful school list is now available on the ARISS web site. There are several ARISS web sites:

English: http://www.rac.ca/ariss/

French: http://c.avmdti.free.fr/ariss/index.htm

ARISS Europe: http://www.ariss-eu.org/

ARISS Japan: http://www.jarl.or.jp/ariss/

Other locations include:

Latest ARISS announcements and news
http://www.amsat.org/amsat/ariss/news/arissnews.txt

Successful school list
http://www.amsat.org/amsat/ariss/news/Successful_ARISS_schools.rtf

The ISS Fan Club website is:
http://www.issfanclub.com

K1ELA has a website at:
http://members.aol.com/k1ela/index.html

ON6SAT has a website at:
http://on6sat.com/links/

A listing of ARISS related magazine articles:
http://www.amsat.org/amsat/ariss/news/ARISS_magazine_articles.rtf

Currently the list includes articles from CQ, CQ VHF, QST, and The AMSAT Journal. Please contact me directly if you have additional suggestions.

[ANS thanks Charlie Sufana, AJ9N and SAREX for the above information]

SB SAT @ AMSAT $ANS-226.04
MRO Electra SDR post-lauch checkout

AMSAT News Service Bulletin 226.04
From AMSAT HQ SILVER SPRING, MD.
Aug 14, 2005
To All RADIO AMATEURS
BID: $ANS-226.04

Advance information, subject to change:

Post-launch checkout of the Electra software-defined UHF radio aboard the Mars Reconnaissance Orbiter will be conducted on or about 26 September 2005. These tests will include CW transmissions during spacecraft turns to verify the UHF quadrifilar helix antenna pattern. Interested radio amateurs and amateur and professional radio-astronomers in North America with sensitive receiving capabilities at 437.1 MHz can attempt to receive the UHF signal from MRO during this test.

More details will follow.

Tom,

Good Christ Almighty; terrific notion of getting a repeater of any sorts on the moon. However, we can't seem to get squat deployed upon the moon unless it's capable of surviving a rather nasty impact as having planned upon more than a decade ago by the LUNAR-A mission that's still on hold.

Speaking about NASA/Apollo (the ultimate space-toilet of infomercials and disinformation-R-us crapolla), and of their continuing utter lack of having a shred worth of hard-science or that of any other believable evidence that's about as MOS infomercialism as it gets.

"AMIE obtained this image from an altitude of about 2000 kilometres. It covers an area of about 100 kilometres and shows the region around Hadley Rille centred at approximately 25=B0 North and 3=B0 East."
http://www.esa.int/SPECIALS/SMART-1/SEMB7A808BE_0.html
"The rille begins at the curved gash on the left side of this image, and is seen clearest in the rectangular, mare-floored valley in the centre of the image. It is over 120 kilometres long, and up to 1500 metres across and over 300 metres deep in places."
"The camera itself has a medium field of view of 5.3 degrees by 5.3 degrees and provides a high-resolution image at 27 metres per pixel from an altitude of 300 kilometres. The image measures 1024 x 1024 pixels. Data from the micro-imager are read and stored in the AMIE electronics, where they can be downloaded as required from the spacecraft."

Unfortunately, as for having been obtained from 2000 km isn't worth diddly squat compared to the 100 km advantage of the Apollo CM orbit and further boosted by way of using their 10X telephoto lens for a full frame magnification of roughly 38,400:1 as compared to imaging the same from Earth using their 1:1 lens.

The SMART-1/AMIE camera absolutely somewhat sucks at 180 m/pixel as compared to Kodak film and quality optics as utilized from the distance of 100 km, having been recorded upon essentially high resolution B&W (8192 x 8192 or 164 lpmm) format of film that I believe is worth something better than 1.8 m/pixel, and worth 256 bits per pixel at that. Still there's no sign of anything Apollo, unless somewhat recent impact craters are all that's showing us the truth.

Thus even if SMART-1 were to cruise to within 300 km and obtain it's somewhat bit-limited worth of 27 m/pixel isn't going to become worth even a tenth as good of what's already on file, and even that's of what's 35+ years old at that.

Too bad we can't manage to orbit something of a 100X optical that's getting onto a 2.2 micron/pixel CCD populated chip of 10x10 mm, and of accomplishing this robotic task at just 10 km off the deck, obviously better than having to make due with the Mars Express imaging resolution as having been obtained from 260+km that's actually limited to 7 micron pixels that's clearly out dated by the latest CCD and a 200X lens or mirror standard that should be able to beat that resolution at perhaps obtaining something less than 150 mm of at least 16 bits/pixel,

although flying 10 km off the deck makes that worth 15 mm/pixel.
http://sci.esa.int/science-e/www/object/index.cfm?fobjectid=3D34826&fbodylo=
ngid=3D1597
Without applied PhotoShop "correspond to 2.3 metre square pixels
on-ground for a spacecraft altitude of 250 km."

As is, their 2.4 km x 2.4 km per frame as obtained from 250 km would become 0.96 x 0.96 km per frame if utilized at 100 km off the lunar surface, that's a raw 938 mm/pixel if there were no improvements in lens or CCD applied.

Since we're only going for the moon, the 972 mm Matsukov-Cassegrain telescope could be replaced with a 2000 mm and the CCD replaced with the 2.2 micron/pixel, thus another 6.547 fold improvement would get that resolution as obtained from 100 km down to 143.3 mm/pixel, then a good application of PhotoShop shouldn't have any problem with creating a believable 16 mm/pixel. Cut the orbit down to 10 km off the deck and I believer we're into reading serial numbers off those supposed lander remains, those items of our grand old cloak and dagger cold-war days of disinformation-R-us and of spookology of utilizing all sorts of smoke and mirrors on steroids, of which as far as I can tell still isn't over until the fat lady sings.

Of course somewhat harsh spectrum cut-off and/or band-pass filtering could be utilized, just in case the camera caught a look-see above the horizon, thus the horrifically bright (near-blue & near-UV) worth of the Sirius star system and otherwise nearly blindingly bright likes of Venus could be diminished and/or later PhotoShop removed so that there'd still be none of those stinking stars or that of a nearby Venus by which anyone could actually figure out if the moon imaging was real or not. We also wouldn't want to ever get a look-see at having Earth above the fully solar illuminated but otherwise extremely dark lunar surface that's showing us a somewhat reddish tint of a nearly coal dark golden lunar hew instead of the composite of cornmeal and portland cement and/or of a somewhat pumice like spectrum worth of gray tones as to what the Apollo/EVA obtained images recorded (whatever you do, don't look at anything of "moonpans" near white-out zones of lunar terrain).

Launch Date: May 05,2005

Status: On orbit
Current Mode: U/V

Proposed frequencies:
-------------------
Indian transponder:
Uplink  : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacom  : 145.940MHz continue carier signal

Dutch transponder:
Uplink  : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacon  : 145.860MHz 12WPM with CW message
[07242005]

AO-51 ECHO
Catalog number: 28375
Launch date: June 29, 2004

Status: Testing
Curent Mode: PBBS - OFF
      FM REPEATER - V/U HIGH POWER

Analog voice downlink:  435.300 MHz FM
         435.150 MHz FM
Analog voice uplink: 145.880 MHZ FM
         145.920 MHz FM 67Hz PL tone
                       1268.700 MHz FM 67Hz PL tone

Digital Downlinks:      435.150 MHz FM, 38k4 Digital, PBP, 1 watt output
                       2401.200 MHz FM  38k4 bps, AX.25
Digital Uplink:         145.860 MHz FM, 9k6 Digital, Pacsat Broadcast
   Protocol (PBP)

Broadcast: PECHO-11
BBS:  PECHO-12

Current scheduled operating modes:

15 Aug
FM Repeater, V/S
Uplink: 145.920 mhz FM, 67hz PL Tone
Downlink 2401.200 mhz FM
```

22 Aug
FM Repeater, V/U
Uplink: 145.920 mhz FM, 67 hz PL Tone
Downlink 435.300 mhz FM
9k6 Digital, V/U, PBP BBS (Pacsat Broadcast Protocol BBS)
Uplink: 145.860 mhz FM, 9k6 PBP Digital
Downlink: 435.150 mhz FM, 9k6 PBP Digital

[ANS-WSR thanks Mike, KE4AZN for the above information]

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that SO-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz. The
order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10 minute timer.
[09122004]
=====
FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

John, N4QWL reports on July 16th, 2005:

Last evening I had a AOS to LOS qso with WI2W. FO-29 came up at 01:17z here in FM07 and I found WI2W and we chatted until 01:33z. The satellite was at 2 degrees elevation when I finally heard him start to crackle a bit. What a great QSO! To think that I watched this bird launch back in 1996 and it is still working so well is a real thrill. I believe I still have the video. I might just look for it and watch it again. Boy do I love this satellite stuff! Look for you all up there.

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will automatically analyze all digital telemetry from the satellite (such as current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[ANS-WSR wishes to thanks John, N4QWL for this week's report]
[07172005]
=====
AO-27 AMRAD
Catalog number: 22825
Launched: September 26, 1993

Status: Operational

Uplink: 145.850 MHz FM
Downlink: 436.795 MHz FM

The latest information on AO-27 from control operator Michael Wyrick, N3UC (former N4USI), can be found at:
http://www.ao27.org

An AO-27 question-and-answer page is available on the AMSAT-NA web site, with updates by Ray, W2RS. The URL is:
http://www.amsat.org/amsat/intro/ao27faq.html

[ANS-WSR thanks John, K6YK, for this week's AO-27 report]

=====
INTERNATIONAL SPACE STATION (ISS) - ARISS
Catalog number: 25544
Launch date: November 20, 1998

Status: Operational
Current Mode: U/V CROSS-BAND REPEATER
Digipeater: Inactive

The current Expedition 11 crew is:
Commander Sergei Krikalev
Flight Engineer John Phillips

Worldwide packet uplink: 145.990 MHz FM
Region 1 voice uplink: 145.200 MHz FM
Region 2/3 voice uplink: 144.490 MHz FM
Worldwide downlink: 145.800 MHz FM

Repeater Uplink: 437.800 MHz FM
Repeater Downlink: 145.800 MHz FM
Doppler Shift is 10 KHz

Russian callsigns: RS0ISS, RZ3DZR
USA callsign: NA1SS
Packet station mailbox callsign: RS0ISS-11
Packet station keyboard callsign: RS0ISS-3
Digipeater callsign: ARISS

This off the ARISS webpage:
http://www.rac.ca/ariss/oindex.htm#New%20ARISS%20Operations :
The ARISS program is pleased to announce that the amateur radio equipment aboard the International Space Station is now operating in cross-band repeat mode. We realize that many of you will miss the packet-operating mode. However, cross-band repeat allows further experimentation of the ISS amateur radio system

The downlink for this operating mode remains the same, so listen for the station on 145.80 MHz. The new uplink frequency is 437.80 MHz. All frequencies
are subject to Doppler shifting. For further information on working

satellites
and adjusting for Doppler shift, please review Emily Clark's (W0EEC)
excellent
presentation on AMSAT's website:
http://www.amsat.org/amsat-new/information/faqs/Intro_sats.pdf

The ISS daily crew schedule can be found at:
http://spaceflight.nasa.gov/station/timelines/
Remember that the crew operates on UTC time. Also, all of the time line is
NOT
translated from Russian and posted.

SB SAT @ AMSAT <KB9MMC $ANS-226.S2
WSR 226 Part 2 08/14/2005

AMSAT NEWS SERVICE BULLETIN 226.S2 FROM AMSAT HQ
SILVER SPRING, MD, AUGUST 14, 2005
TO ALL RADIO AMATEURS
BID: $ANS-226.S2

PCSAT2 ?0-??
Catalog Number:
Launch Date: August 1, 2005

Status: Operational

PCSAT2 was installed on the exterior of the International Space
Station and was activated on August 3, 2005.

PCSAT2 CAPABILITIES: PCSAT2 is attached to the ISS and so its operations
must be in cooperation with the ARISS communications suite to minimize any
mutual interference and to coordinate activities. Here are the capabilities
of the PCSAT2 and ARISS payloads:

PCSAT SYSTEM A:

435.275 PCSAT2 DOWNLINK 1200 baud packet with uplink on 145.825
435.275 PCSAT2 DOWNLINK Occasional user PSK-31 continuous downlink
145.825 PCSAT2 DOWNLINK 1200 baud packet
PCSAT SYSTEM B:

437.975 PCSAT2 DOWNLINK periodic Solar Cell data and PCSAT2 telemetry at
9600 baud

437.975 PCSAT2 DOWNLINK TNC-B command downlink at 1200 baud
437.975 PCSAT2 DOWNLINK User Voice Repeater with VHF uplink
437.975 PCSAT2 DOWNLINK Packet digipeater with VHF uplink

It looks like PCSAT2 can best contribute at this time by operating in PSK-31 mode for the near future. This is a very exciting new transponder mode which solves the congestion problem on FM repeaters by letting multiple stations all communicate at the same time.

PSK-31 users are welcome to try out the new PCSAT2 PSK-31 transponder on ISS with an uplink on 29.402 +/- 1 KHz and downlink on 435.275 +/- Doppler using FM.

The FM downlink lets everyone operate full duplex and everyone to see the same view of the passband as everyone else. THus you can see exactly what your signal looks like to everyone else.

Help Wanted: PCSat2 PSK-31 Operations Coordinator Needed

To save power and to avoid any potential interferece to any ISS School contacts, the PSK-31 transponder is only on when a responsible PC2PSK control station in the ISS/PCSat2 footprint turns it on.

If you are interested in PSK-31 operations and want to volunteer to coordinate all the other operators and operations, then we have a job for you. This PSK-31 operations coordinator, who has become fully familiar with ARISS operations, can next start to organize the pass-by-pass PSK-31 control ops.

Contact Bob Bruninga, WB4APR, at wb4apr@amsat.org if you wish to volunteer as the PCSat2 PSK-31 coordinator. Until the PCSat2 team is able to introduce the new coordinator please do not volunteer as a pass control operator.

Refer to this page:

http://www.ew.usna.edu/~bruninga/pec/pc2ops.html

For information about the PCSat2 PSK-31 transponder and a diagram showing a basic configuration for PSK-31 earth stations.

Update August 14, 2005

The PCSat2 team sends a, "Thank You!", to all of the AMSAT and APRS stations feeding science and telemetry data from 437.975 to the APRS-IS. This data feeds the live telemetry page and lets everyone see how the spacecraft is doing around the world: http://www.pcsat2.info

We do, of course, need more stations feeding telemetry, especially from those stations in unusual footprints such as Hawaii and remote areas of the USA, Europe and downunder. More stations capable of receiving and forwarding 9600 baud data would be especially helpful.

The PCSat2 telemetry team plans to write-up a set of turn-key instructions on how to set up a satgate so that others not familiar with APRS can easily join this satgate network. In the interim, stations that wish to experiment and learn can begin using any version of APRS or download the stand-alone ALOGGER 2.02 program from

http://www.billdiaz.dynip.com/.

To set up a satgate, just tune a radio and TNC to one of these channels:

437.975 9600 bd for PCSAT2 data
437.975 1200 bd for PCSAT2 telemetry
145.800 for ARISS packet data
145.825 for the original PCsat

You will need to run your favorite APRS software and connect to satgate.aprsca.net:10150. ALOGGER, mentioned previously now has serial port support for a TNC as a satgate monitoring station.

For the overall PCSAT2 Operations system, see
http://www.ew.usna.edu/~bruninga/pec/pc2ops.html

An on-line overview of PCSAT2 telemetry can be found at:
http://www.pcsat2.info

1200 baud telemetry is just an occasional packet every 10 or 60 seconds. 1200 baud stations can simply feed their downlinks directly into the global APRS system like normal. These will help update the LIVE PCSAT2 telemetry page by G4DPZ at:
http://www.pcsat2.info/PCSat2Web/RealTime.jsp

Packets seen from PCSAT2 can be reviewed at:
http://www.findu.com/cgi-bin/pcsat2.cgi

A screen shot of both the 9600 bps and 1200 bps decoded data as seen by Simon, 9W2QC, can be seen at:
http://www.9w2qc.net/pcsat2/

More information on PCSAT2 can be found at:
http://web.usna.navy.mil/~bruninga/pcsat2.html

[ANS-WSR thanks Bob, WB4APR and the U.S. Naval Academy Satellite Lab for the aboveinformation.]

[ANS-WSR thanks Mike, KE4AZN for the above information]
[07312005]
=====
NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Non-Operational?????

Uplink/downlink: 145.827 MHz 1200 baud AX.25 AFSK via W3ADO-1
Aux/Uplink: 435.250 MHz 9600 baud via PCSAT-2 (off)
APRS Downlink: 144.390 MHz (Region 2)

PCSat is a 1200-baud APRS digipeater designed for use by stations using hand-held or mobile transceivers. Downlinks feed a central web site at: http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy under the guidance of Bob Bruninga, WB4APR.
[07242005]
=====
CUTE-1
Catalog number: 27844

Launched: June 30,2003

Status: Operational

Uplink: ?
Downlink: 436.8375 CW
              437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ?)
Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as OPERATIONAL?
Indeed it is very operational as a CUBESAT sending CW telemetry on 436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at 14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz. Initial orbital parameters were period 101.4 min, apogee 831 km, perigee 819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

[ANS WSR wishes to thank Cliff, K7RR, for this week's information]
[07242005]

=====
UO-11 OSCAR-11
Catalog number: 14781
Launched: March 1, 1984

Status: Semi-operational?

Telemetry Downlink: 145.826 MHz. FM (1200-baud AFSK).
approx. 10 days ON, 10 days OFF
Mode-S Beacon: 2401.500 MHz. ... OFF
UHFBeacon: 435.025 MHz. ... OFF

Clive Wallis wrote, "Very many thanks for all the recent reports of OSCAR-11, on AMSAT-BB and by direct e-mails. I received the good news, on Saturday morning, while at the AMSAT-UK Colloquium. This was entirely unexpected!

When I returned home on Sunday, I heard the passes at 17:21 & 19:02 UTC, and have heard many others since.

Signals seem to be weaker than usual. However,since I last heard the satellite on 30 April, I've reinstalled my antennas , which makes comparisons difficult.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working. One bit in channel 62, DSR mode, has changed from WRITE to READ. DSR is the Digital Store & Readout experiment. This could be significant if the experiment is still drawing current, but the other status bit indicates thet it is switched OFF.

The on-board clock is now showing a very large error. It has lost approximately 15 days since 30 April. I'll be monitoring the clock closely to see whether it changes at a constant rate, in future passes.

Eclipses should end around mid August. That should help the satellite to continue transmitting.

If the watchdog timer is still working, the satellite should switch OFF in the next 10 to 20 days. I would appreciate if listeners could just make a note of the DATE & UTC time when they hear the satellite, so that when it switches OFF we can determine when it was last heard. Please post your reports to AMSAT-BB or e-mail me direct g3cwv@amsat.org, but NOT until it switches OFF!

[ANS-WSR thanks Clive, G3CWV, for the above information]

More information on UO-11 OSCAR-11 can be found at:

SB SAT @ AMSAT <KB9MMC $ANS-226.S3
WSR 226 Part 3 08/14/2005

AMSAT NEWS SERVICE BULLETIN 226.S3 FROM AMSAT HQ
SILVER SPRING, MD, AUGUST 14, 2005
TO ALL RADIO AMATEURS
BID: $ANS-226.S3

THE FOLLOWING ARE IN ORBIT BUT ARE
NON-OPERATIONAL AT THIS TIME:

POSAT-1 PO-28
Catalog Number: 22829
Launched : September 25, 1993

Status: Operational - Not open for Amatuer use

Downlink: 435.250 MHz
435.275 MHz

Uplink: 145.925 MHz
145.975 MHz

Broadcast callsign: POSAT1-11
BBS callsign: POSAT1-12

PO-28 (POSAT-1), Portugal's first satellite, launched 12 years ago, will be turned over to Amateur Radio use in the very near future. That was the word July 30 from AMSAT-UK Secretary Jim Heck, G3WGM, during the AMSAT-UK International Space Colloquium in Guildford, England.

Launched September 25, 1993, the satellite operated as a packet store-and-forward BBS (9600 baud FM FSK) on Amateur Radio frequencies for several weeks in early 1994. Over the years, PO-28's primary usage has been commercial, although plans have called for eventually shifting its operation to ham radio use. G3WGM reports that following lengthy negotiations it has been agreed that the satellite can be switched permanently to amateur frequencies. The changeover is expected to take a couple of weeks.

The Portuguese satellite was built at the University of Surrey as part of a collaborative satellite technology program that involved industry and academe. Uplink frequencies will be 145.925 and 145.975 MHz. Downlink frequencies will be 435.250 and 435.275 MHz. More information on PO-28 is on the AMSAT Web site http://www.amsat.org/amsat/sats/n7hpr/po28.html.

Uplink Frequencies: 145.925 and 145.975 MHz
Downlink Frequencies: 435.250 and 435.275 MHz

Orbit: 822 x 800 km, 98.6 deg inclined, sun-synchronous.

Transponder capabilities include FM repeater and 38k4 data. If you want to hear how loud this satellite is, listen on 429.950 until the change back to amateur radio service.

Keplerian elements for PO-28 are not currently contained in the AMSAT keps bulletins, but can be found at Celestrak in amateur.txt using the name "POSAT". Users of Space Track should query the NORAD Satellite ID number 22829. The name listed by Space Track is "EYESAT A".

More information of POSAT-1 can be found at:
http://www.ee.surrey.ac.uk/SSC/CSER/UOSAT/missions/posat1.html
http://www.amsat.org/amsat/sats/n7hpr/po28.html
[ANS-WSR wishes to thanks Trevor, M5AKA and Jim, G3WGM, for this week's information.]
[08072005]

IO-26 ITAMSAT
Catalog number: 22826
Launch Date: September 26, 1993

Status: Non-operational

Uplink:             145.875 145.900 145.925 145.950 MHz FM (1200-baud)
Downlink:           435.812 MHz SSB
Broadcast Callsign: ITMSAT-11
BBS:                ITMSAT-12

Alberto E. Zagni - I2KBD reports on 02/13/05
The spacecraft is in MBL (safe mode) and is trasmitting just 6 channels
of telemetry. Temperatures and voltage are nominal, but there seems to
be a problem with the onboard receiver, refusing to accept commands.
The spacecraft was launched in 1993, thus nearing 12 years in orbit...

Best regards
Alberto E. Zagni - I2KBD
ITAMSAT Mission Director

PO-34 PANSAT
Catalog number: 25520
Launched: October 30, 1998

Status: Telemetry downloads only

Uplink/downlink frequency (listed on the PanSat web site) 436.500 MHz

The satellite is not available for general uplink transmissions.

The Naval Postgraduate School developed PanSat. At the time of launch, PanSat spread-spectrum digital transponders were to be available to Amateur Radio operators along with software to utilize this technology.

The satellite is still operating, however, the spread spectrum packet radio portion never took place. The spacecraft is now beyond it's initial 2-year mission life, but telemetry records are still being downloaded.

For more information, visit the official PanSat web site at:
http://www.sp.nps.navy.mil/pansat/
[05092004]

AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio anand telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at: http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

SSETI ?O-??
Catalog Number:
Proposed Launch Date: LATE 2005

Status: AWAITING LAUNCH

Graham, G3VZV reports:
We have now been advised that the revised launch date for SSETI Express and the other satellites on the DMC3 COSMOS launch has been confirmed as September
27th - so please keep those fingers crossed!

SpaceDaily has a report about SSETI at:
http://www.spacedaily.com/news/internet-04zzzu.html

You can find more info about SSETI at:
http://sseti.gte.tuwien.ac.at/WSW4/

Looking at the website for the SSETI Express webcam
http://sseti.gte.tuwien.ac.at/WSW4/webcam.htm

[ANS thanks Graham, G3VZV for the above information]
[07312005]
=====
PHASE 3E ?O-??
Catalog Number:
Proposed Launch Date: Early 2006

Status: Under Construction

William Leijenaar, PE1RAH reports on July 16th, 2005:

Hi AMSATs,

I always like to inform the AMSATs public about my P3e work, but unfortunatly due to
some reasons there was not much time and nothing much to say...

However, now I am happy to announce that the my MODE-UV transponder design for P3e is ready at the P3e integration place in Marburg (Germany). About 4 weeks ago I was in Marburg before, where the transponder has been checked. Unfortunatly some unsure things were found in the design. The unsure things were about long term stability after many years in space.

At home in The Netherlands, I changed the design with some minor changes to have a secure long term stability. Finally I tested the transponder again and it performed well within the specifications. Again something learned for future transponder designs :o)

Last Wednesday I drove to AMSAT-DL P3e integrations place in Marburg again, and have my transponder again checked. In the beginning it seemed that the 70cm receiver lost 10dB in sensetivity. After some more measurements we find out that it was due to a bad attenuator we used for protection at the input.

Together with Karl Meinzer we looked for any problems, but so far we could see (without HELAPS) all was okay. In the afternoon I went back home again, this time without the MODE-UV.

Now the MODE-UV will get a new home, the home of P3e... :o)
I hope the transponder will work like its elder sister in AO-10, and you all will enjoy it for many years...

It was lots of work to get it this far, but I know it is for a good purpose...

For the latest project status update please visit the AMSAT-DL
P3-E web page:
http://www.amsat-dl.org/p3e/

[ANS-WSR wishes to thank William Leijenaar, PE1RAH for this week's report]

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
        888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)

* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satelite Report Editor is James K. Darrow, KB9MMC.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

AMSAT Symposium Reminder

AMSAT News Service Bulletin 233.01
From AMSAT HQ SILVER SPRING, MD.
August 21, 2005
To All RADIO AMATEURS
BID: $ANS-233.01

Space! Ham radio goes there and you can join in the fun! Come to the AMSAT Technical Symposium and Annual Meeting this fall in lovely Lafayette, Louisiana. Education and technical sessions begin on Friday, the 7th of October. Technical, Field Ops, and the IARU forum follow through Sunday the 9th of October. Enjoy the best of Acadian Louisiana with Friday's "Shrimp Boil," Saturday's Banquet with great prizes, and Sunday's "Swamp Tour."

This year represents the first time that you can register for the Symposium online! To get the $10 early registration discount, registrations must be received by 15 September 2005. For more, see:

http://www.amsat.org/amsat-new/symposium/.

[ANS thanks the AMSAT Symposium team for the above information]

SB SAT @ AMSAT $ANS-233.03
AMSAT Election Deadline Approaching

AMSAT News Service Bulletin 233.03

From AMSAT HQ SILVER SPRING, MD.
August 21, 2005
To All RADIO AMATEURS
BID: $ANS-233.03

With the deadline for the receipt of ballots for the AMSAT Board of Directors less than a month away, Bill Hook, W3QBC, who heads up AMSAT's Ballot Counting Committee, advises that to date only 609 ballots have been received. This amounts to only 15% of the total number of ballots mailed to members.

Votes are needed to select the 4 best qualified to serve among the 8 candidates. The biographical information as submitted by the Candidates can be found on the AMSAT website at
http://www.amsat.org/amsat-new/AboutAmsat/candidate_bios.php

To be counted, ballots must be received at the AMSAT office before the close of business on Thursday, 15 September 2005.

[ANS thanks Bill W3QBC for the above information]

SB SAT @ AMSAT $ANS-233.04
Software Defined Transponder Prototype On-the-Air

AMSAT News Service Bulletin 233.04
From AMSAT HQ SILVER SPRING, MD.
August 21, 2005
To All RADIO AMATEURS
BID: $ANS-233.04

At the labs of CNS Systems, Inc. in Md. (W2GPS business), W2GPS, W3IWI, and N4HY made the first on-the-air tests using a prototype software defined transponder on 16 August 2005. A sucessful three way QSO was conducted in a 45 Khz wide transponder. An audio clip of this first QSO is available at
ftp://ftp.cnssys.com/pub/amsat/Eagle_SDT_1st_Contact.mp3

At the AMSAT Symposium in Louisiana, the plan is to have both the Mode B and the Mode A transponder fully functional and usable by all. We will show the power of using software defined radio for the transponders by having 1/2 of the transponder divided into two or three FM channels and the other half fully linear whilst adding 400bps AMSAT standard beacon in the middle, AND on command, switch it to fully linear, etc.

We will incorporate the Stella AGC algorithms developed by Howard, G6LVB, adapted to our hardware for the demonstration in Lousiana. Expect to be able to conduct SSB, CW, FM, etc. QSO's on Mode A, Mode B and Mode LS if time permits.

SB SAT @ AMSAT $ANS-233.05
AMSAT Website Technical Review Team Formed

AMSAT News Service Bulletin 233.05
From AMSAT HQ SILVER SPRING, MD.
August 21, 2005
To All RADIO AMATEURS
BID: $ANS-233.05

Barry Baines, WD4ASW, AMSAT's VP-Marketing & User Services is pleased to announce that our Website Technical Review Team, under the leadership of Gould Smith, WA4SXM has been formed. Gould serves as Director-Field Operations and is the author of a number of AMSAT books. He is well qualified to handle this important task with the assistance of a very capable team that he has formed. The team that Gould has developed consists of AA2TX, KO4MA, KQ6EA, N8FGV, and VA3DB.

The team has begun a systematic look at the content of the AMSAT website for technical issues, and is assigning a priority to identified items. The first areas the team is addressing are the Glossary and the Mode J operation article. When appropriate, they will seek input from other individuals who may be knowledgeable in particular areas. Two members of the team will OK articles for technical content with final approval from Gould before he forwards them for inclusion on the website.

"Our team is excited about updating the technical content of our website" says Gould Smith, WA4SXM. "However, this will take some time and will require thoughtful evaluation. In looking at the Glossary for example, we have found through our initial research that even the experts sometimes disagree on proper definition of technical terms. We want the AMSAT website to be a trusted and reliable source."

Emily Clarke, W0EEC serves as Director-Website and will be working closely with Gould to implement changes as they are developed.

Should website visitors wish to suggest areas of current website technical content for the team's consideration or are interested in submitting suggested technical changes or updates, they can do so by contacting Gould Smith, WA4SXM using his AMSAT e-mail alias. Please put 'Website Technical Review' in the subject line. Gould and several members of the team will be attending the AMSAT Symposium in Lafayette, LA (7-9 OCT 2005) and are interested in hearing comments from attendees concerning their thoughts on the updating of technical content of our website.

[ANS thanks Barry, WD4ASW for the above information]

SB SAT @ AMSAT $ANS-233.07
ARISS Status - 15 August 2005

AMSAT News Service Bulletin 233.07
From AMSAT HQ SILVER SPRING, MD.
August 21, 2005
To All RADIO AMATEURS
BID: $ANS-233.07

1. ARISS Student Pursues Astronaut Career

Stephanie Radcliff was a student at Daviess County High School (DCHS) in Owensboro, Kentucky when the school experienced an ARISS contact on May 31, 2001. She had prepared three questions to ask astronaut Susan Helms, KC7NHZ, that day, including one concerning future space explorations.

Four years later, on August 12, 2005, Stephanie returned to her alma mater to speak to the students there. She is now a graduate of Emory-Riddle University, and holds a degree in the aerospace field. She has taken the first steps toward becoming an astronaut and hopes to be accepted for astronaut training. Harold Wilson, the coordinating teacher of the DCHS - ARISS contact, remarked that it was the ARISS contact which inspired Stephanie to pursue this career choice.

2. PCSAT2/MISSE5 Status

The PCSAT2 PSK-31 transponder was turned on. It uses an uplink on 29.402

+/- 1 KHz and downlink on 435.275 +/- Doppler using FM . For more information, see: http://www.ew.usna.edu/~bruninga/pec/pc2ops.html

3. ARISS International Meeting

ARRL ran a story on the ARISS International face-to-face Meeting held at the University of Surrey. The article, entitled, "ARISS Delegates Urged to Cast Eye on Future of Ham Radio in Space," may be found on their website. See: http://www.arrl.org/news/stories/2005/08/12/106/?nc=1

ARISS delegate Rosalie White is currently working on the minutes of the U.K. meeting. They will be posted on the ARISS and AMSAT websites in the near future.

The next ARISS International Teleconference will be held on Tuesday, 23 August 2005.

4. Australian News Article on Astronaut's Father

The Australian newspaper, The Age, ran a story on Adrian Thomas. Thomas, father of astronaut Andy Thomas, was waiting apprehensively for word of Discovery's landing. A ham friend of his had been listening to NASA's channel, and called to let him know that the shuttle was heading for a safe landing in California. "Ham radio call ends father's anxious wait," may be found at:
http://www.theage.com.au/news/national/ham-radio-call-ends-fathers-anxious-wait/2005/08/10/1123353330011.html

5. Astronaut to Visit ARISS School

Astronaut Leroy Chiao, KE5BRW, plans to visit Fairview Elementary School in Mount Prospect, Illinois. Chiao visited the school in May, 2004, before his space flight, and. he exchanged e-mails and photos with the school, and participated in an ARISS contact with the children on 10 February 2005 during his Expedition 10 increment. The date for his visit has not yet been set, but 7 September 2005 is being considered. Fairview has posted on their website photos of Chiao's first visit, and the audio and questions from the ARISS contact. See:
http://fairview.dist57.org:16080/spacewebsite/fvspacecontact.html

6. Teaching from Space Teleconference Held

A teleconference was held on Thursday, August 10 between ARISS-U.S. members and the Teaching from Space Office at JSC. Education Specialist Jonathan Neubauer will be the point of contact for ARISS and the Education Office. ARISS extends a welcome to Jon!

[ANS thanks Carol, KB3LKI for the above information]

OSCAR 11 Report - 15 August 2005

AMSAT News Service Bulletin 233.08
From AMSAT HQ SILVER SPRING, MD.
August 21, 2005
To All RADIO AMATEURS
BID: $ANS-233.08

OSCAR-11 REPORT

15 August 2005

OSCAR-11 is back! I received the good news, on Saturday morning, while at the AMSAT-UK Colloquium. This was entirely unexpected! On Sunday morning Bob G4VRC played me a recording of an early morning pass received that day.

During the period 21 July to 14 August 2005 consistent signals have been heard from 30 July to 08 August. Signals seem to be weaker than usual, confirmed by the many reports received. However,since I last heard the satellite on 30 April, I've reinstalled my antennas , which makes comparisons difficult.

Many thanks for all the recent reports of OSCAR-11 including those from KU7Z (who heard it first), KB2M, VK6XH, HK7MKE, KA2UPW, JE9PEL, G1OCN, HB9SKA and G8OQW.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working. One bit in channel 62, DSR mode, has changed from WRITE to READ. DSR is the Digital Store & Readout experiment. This could be significant if the experiment is still drawing current, but the other status bit indicates that it is switched OFF.

The on-board clock is now showing a very large error. It has lost approximately 19 days since 30 April. During the recent data collection period, the clock error has been changing at a decreasing rate. The size of the clock error and the rate at which it is changing is similar to the duration of the solar eclipse periods. This suggests that the clock might have been switching OFF during eclipses.

The eclipses have now ended, and the satellite should be in continuous sunlight for the remainder of this year, and well into next year. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures.

If the watchdog timer is still operating on a 20 day cycle, ie. approximately ten days ON followed by 10 days OFF, then the VHF beacon should resume transmissions around 18 August.

The Beacon frequencies are -

VHF 145.826 MHz. AFSK FM ASCII Telemetry

UHF 435.025 MHz. OFF

S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is www.users.zetnet.co.uk/clivew/

If you place this bulletin on a terrestrial packet network, please use the bulletin identifier $BID:U2RPT112.CWV, to prevent duplication.

[ANS thanks Clive, G3CWV for the above information]

=====

SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating
procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that SO-50 has
shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The
order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm
the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT
the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window
will reset the 10 minute timer.

[09122004]

=====

FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

John, N4QWL reports on July 16th, 2005:

Last evening I had a AOS to LOS qso with WI2W. FO-29 came up at 01:17z here in FM07 and I found WI2W and we chatted until 01:33z. The satellite was at 2 degrees elevation when I finally heard him start to crackle a bit. What a great QSO! To think that I watched this bird launch back in 1996 and it is still working so well is a real thrill. I believe I still have the video. I might just look for it and watch it again. Boy do I love this satellite stuff! Look for you all up there.

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will automatically analyze all digital telemetry from the satellite (such as current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[ANS-WSR wishes to thanks John, N4QWL for this week's report]
[07172005]
=====
AO-27 AMRAD
Catalog number: 22825
Launched: September 26, 1993

Status: Operational

Uplink: 145.850 MHz FM
Downlink: 436.795 MHz FM

The latest information on AO-27 from control operator Michael Wyrick, N3UC (former N4USI), can be found at:
http://www.ao27.org

An AO-27 question-and-answer page is available on the AMSAT-NA web site, with updates by Ray, W2RS. The URL is:
http://www.amsat.org/amsat/intro/ao27faq.html

[ANS-WSR thanks John, K6YK, for this week's AO-27 report]
[08292004]

=====

AO-7 AMSAT OSCAR 7
Catalog number: 07530
Launch Date: November 15, 1974

Status: Semi-operational in sunlight.
Return to active status: June 21,2002

Uplink:	145.850 to 145.950 MHz CW/USB Mode A
	432.125 to 432.175 MHz CW/LSB Mode B
Downlink:	29.400 to 29.500 MHz CW/USB Mode A
	145.975 to 145.925 MHz CW/USB Mode B
Beacon:	29.502 MHz, 145.972 MHz, 435.1 MHz, 2304.1 MHz

Emily, W0EEC has created a website to allow the users of AO-7 to record contacts, observations and use of the satellite more effectively at:
http://www.emilyshouse.com/experthams/ao7/main.php
This includes the ability to log contacts.

Tim, K3TZ has written a program to decode AO-07 telemetry.
The program can be downloaded at:
http://www.qsl.net/k3tz/files/K3TZ_AO-07_Telemetry_Decoder_0.5.zip

For more AO-7 info:
http://www.amsat.org/amsat/sats/n7hpr/ao7.html

=====

INTERNATIONAL SPACE STATION (ISS) - ARISS
Catalog number: 25544
Launch date: November 20, 1998

Status: Operational
Current Mode: U/V CROSS-BAND REPEATER
Digipeater: Inactive

The current Expedition 11 crew is:
Commander Sergei Krikalev
Flight Engineer John Phillips

Worldwide packet uplink:	145.990 MHz FM
Region 1 voice uplink:	145.200 MHz FM
Region 2/3 voice uplink:	144.490 MHz FM
Worldwide downlink:	145.800 MHz FM

Repeater Uplink:	437.800 MHz FM
Repeater Downlink:	145.800 MHz FM

Doppler Shift is 10 KHz

Russian callsigns:	RS0ISS, RZ3DZR
USA callsign:	NA1SS
Packet station mailbox callsign:	RS0ISS-11
Packet station keyboard callsign:	RS0ISS-3
Digipeater callsign:	ARISS

This off the ARISS webpage:
http://www.rac.ca/ariss/oindex.htm#New%20ARISS%20Operations :
The ARISS program is pleased to announce that the amateur radio equipment aboard the International Space Station is now operating in cross-band repeat mode. We realize that many of you will miss the packet-operating mode. However, cross-band repeat allows further experimentation of the ISS amateur radio system

The downlink for this operating mode remains the same, so listen for the station on 145.80 MHz. The new uplink frequency is 437.80 MHz. All frequencies are subject to Doppler shifting. For further information on working satellites and adjusting for Doppler shift, please review Emily Clark's (W0EEC) excellent presentation on AMSAT's website:
http://www.amsat.org/amsat-new/information/faqs/Intro_sats.pdf

The ISS daily crew schedule can be found at:
http://spaceflight.nasa.gov/station/timelines/
Remember that the crew operates on UTC time. Also, all of the time line is NOT translated from Russian and posted.

More information is available at:

SB SAT @ AMSAT <KB9MMC $ANS-233.S2
WSR 233 Part 2 08/21/2005

AMSAT NEWS SERVICE BULLETIN 233.S2 FROM AMSAT HQ
SILVER SPRING, MD, AUGUST 21, 2005
TO ALL RADIO AMATEURS
BID: $ANS-233.S2

PCSAT2 ?0-??
Catalog Number:
Launch Date: August 1, 2005

Status: Operational

PCSAT2 was installed on the exterior of the International Space Station and was activated on August 3, 2005.

PCSAT2 CAPABILITIES: PCSAT2 is attached to the ISS and so its operations must be in cooperation with the ARISS communications suite to minimize any mutual interference and to coordinate activities. Here are the capabilities of the PCSAT2 and ARISS payloads:

PCSAT SYSTEM A:

435.275 PCSAT2 DOWNLINK 1200 baud packet with uplink on 145.825
435.275 PCSAT2 DOWNLINK Occasional user PSK-31 continuous downlink
145.825 PCSAT2 DOWNLINK 1200 baud packet
PCSAT SYSTEM B:

437.975 PCSAT2 DOWNLINK periodic Solar Cell data and PCSAT2 telemetry at 9600 baud
437.975 PCSAT2 DOWNLINK TNC-B command downlink at 1200 baud
437.975 PCSAT2 DOWNLINK User Voice Repeater with VHF uplink
437.975 PCSAT2 DOWNLINK Packet digipeater with VHF uplink

It looks like PCSAT2 can best contribute at this time by operating in PSK-31 mode for the near future. This is a very exciting new transponder mode which solves the congestion problem on FM repeaters by letting multiple stations all communicate at the same time.

PSK-31 users are welcome to try out the new PCSAT2 PSK-31 transponder on ISS with an uplink on 29.402 +/- 1 KHz and downlink on 435.275 +/- Doppler using FM.

The FM downlink lets everyone operate full duplex and everyone to see the same view of the passband as everyone else. THus you can see exactly what your signal looks like to everyone else.

Help Wanted: PCSat2 PSK-31 Operations Coordinator Needed

To save power and to avoid any potential interferece to any ISS School contacts, the PSK-31 transponder is only on when a responsible PC2PSK control station in the ISS/PCSat2 footprint turns it on.

If you are interested in PSK-31 operations and want to volunteer to coordinate all the other operators and operations, then we have a job for you. This PSK-31 operations coordinator, who has become fully familiar with ARISS operations, can next start to organize the pass-by-pass PSK-31 control ops.

Contact Bob Bruninga, WB4APR, at wb4apr@amsat.org if you wish to volunteer as the PCSat2 PSK-31 coordinator. Until the PCSat2 team is able to introduce the new coordinator please do not volunteer as a pass control operator.

Refer to this page:

http://www.ew.usna.edu/~bruninga/pec/pc2ops.html

For information about the PCSat2 PSK-31 transponder and a diagram showing a basic configuration for PSK-31 earth stations.

Update August 14, 2005

The PCSat2 team sends a, "Thank You!", to all of the AMSAT and APRS stations feeding science and telemetry data from 437.975 to the APRS-IS. This data feeds the live telemetry page and lets everyone see how the spacecraft is doing around the world: http://www.pcsat2.info

We do, of course, need more stations feeding telemetry, especially from those stations in unusual footprints such as Hawaii and remote areas of the USA, Europe and downunder. More stations capable of receiving and forwarding 9600 baud data would be especially helpful.

The PCSat2 telemetry team plans to write-up a set of turn-key instructions on how to set up a satgate so that others not familiar with APRS can easily join this satgate network. In the interim, stations that wish to experiment and learn can begin using any version of APRS or download the stand-alone ALOGGER 2.02 program from

http://www.billdiaz.dynip.com/.

To set up a satgate, just tune a radio and TNC to one of these channels:

437.975 9600 bd for PCSAT2 data
437.975 1200 bd for PCSAT2 telemetry
145.800 for ARISS packet data
145.825 for the original PCsat

You will need to run your favorite APRS software and connect to satgate.aprsca.net:10150. ALOGGER, mentioned previously now has serial port support for a TNC as a satgate monitoring station.

For the overall PCSAT2 Operations system, see
http://www.ew.usna.edu/~bruninga/pec/pc2ops.html

An on-line overview of PCSAT2 telemetry can be found at:
http://www.pcsat2.info

1200 baud telemetry is just an occasional packet every 10 or 60 seconds. 1200 baud stations can simply feed their downlinks directly into the global APRS system like normal. These will help update the LIVE PCSAT2 telemetry page by G4DPZ at:
http://www.pcsat2.info/PCSat2Web/RealTime.jsp

Packets seen from PCSAT2 can be reviewed at:
http://www.findu.com/cgi-bin/pcsat2.cgi

A screen shot of both the 9600 bps and 1200 bps decoded data as seen by Simon, 9W2QC, can be seen at:
http://www.9w2qc.net/pcsat2/

More information on PCSAT2 can be found at:
http://web.usna.navy.mil/~bruninga/pcsat2.html

[ANS-WSR thanks Bob, WB4APR and the U.S. Naval Academy Satellite Lab for the aboveinformation.]

Catalog number: 26931
Launch Date: September 30, 2001

Status: Non-Operational?????

Uplink/downlink: 145.827 MHz 1200 baud AX.25 AFSK via W3ADO-1
Aux/Uplink: 435.250 MHz 9600 baud via PCSAT-2 (off)
APRS Downlink: 144.390 MHz (Region 2)

PCSat is a 1200-baud APRS digipeater designed for use by stations using hand-held or mobile transceivers. Downlinks feed a central web site at:

http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy under the guidance of Bob Bruninga, WB4APR.

=====

CUTE-1

Catalog number: 27844
Launched: June 30,2003

Status: Operational

Uplink: ?
Downlink: 436.8375 CW
              437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ?)
Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as OPERATIONAL?
Indeed it is very operational as a CUBESAT sending CW telemetry on 436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at 14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz. Initial orbital parameters were period 101.4 min, apogee 831 km, perigee 819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

[ANS WSR wishes to thank Cliff, K7RR, for this week's information]

=====
MO-46 TIUNGSAT-1
Catalog number: 26548
Launched: September 26, 2000

Status: Operational

Uplink:             145.850 or 145.925 MHz 9600-baud FSK
Downlink:           437.325 MHz
Broadcast callsign: MYSAT3-11
BBS:                MYSAT3-12

TiungSat-1 is Malaysia's first micro-satellite and in addition to
commercial land and weather imaging payloads offers FM and FSK
Amateur Radio communication.

TiungSat-1, named after the mynah bird of Malaysia, was developed as
a collaborative effort between the Malaysian government and Surrey
Satellite Technology Ltd.

=====
UO-11 OSCAR-11
Catalog number: 14781
Launched: March 1, 1984

Status: Semi-operational?

Telemetry Downlink: 145.826 MHz. FM (1200-baud AFSK).
                    approx. 10 days ON, 10 days OFF
Mode-S Beacon:      2401.500 MHz. ... OFF
UHFBeacon:          435.025 MHz. ...  OFF
```

OSCAR-11 is back! I received the good news, on Saturday morning, while at the AMSAT-UK Colloquium. This was entirely unexpected! On Sunday morning Bob G4VRC played me a recording of an early morning pass received that day.

During the period 21 July to 14 August 2005 consistent signals have been heard from 30 July to 08 August. Signals seem to be weaker than usual, confirmed by the many reports received. However,since I last heard the satellite on 30 April, I've reinstalled my antennas , which makes comparisons difficult.

Many thanks for all the recent reports of OSCAR-11 including those from KU7Z (who heard it first), KB2M, VK6XH, HK7MKE, KA2UPW, JE9PEL, G1OCN, HB9SKA and G8OQW.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working. One bit in channel 62, DSR mode, has changed from WRITE to READ. DSR is the Digital Store & Readout experiment. This could be significant if the experiment is still drawing current, but the other status bit indicates that it is switched OFF.

The on-board clock is now showing a very large error. It has lost approximately 19 days since 30 April. During the recent data collection period, the clock error has been changing at a decreasing rate. The size of the clock error and the rate at which it is changing is similar to the duration of the solar eclipse periods. This suggests that the clock might have been switching OFF during eclipses.

The eclipses have now ended, and the satellite should be in continuous sunlight for the remainder of this year, and well into next year. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures.

If the watchdog timer is still operating on a 20 day cycle, ie. approximately ten days ON followed by 10 days OFF, then the VHF beacon should resume transmissions around 18 August.

The Beacon frequencies are -

VHF 145.826 MHz. AFSK FM ASCII Telemetry

UHF 435.025 MHz. OFF

S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is www.users.zetnet.co.uk/clivew/

If you place this bulletin on a terrestrial packet network, please use the bulletin identifier $BID:U2RPT112.CWV, to prevent duplication.

[ANS-WSR thanks Clive, G3CWV, for the above information]

WSR 233 Part 3 08/21/2005

AMSAT NEWS SERVICE BULLETIN 233.S3 FROM AMSAT HQ
SILVER SPRING, MD, AUGUST 21, 2005
TO ALL RADIO AMATEURS
BID: $ANS-233.S3

THE FOLLOWING ARE IN ORBIT BUT ARE
NON-OPERATIONAL AT THIS TIME:

POSAT-1 PO-28
Catalog Number: 22829
Launched : September 25, 1993

Status: Operational - Not open for Amatuer use

```
Downlink: 435.250 MHz
          435.275 MHz

Uplink:   145.925 MHz
          145.975 MHz
```

Broadcast callsign: POSAT1-11
BBS callsign: POSAT1-12

PO-28 (POSAT-1), Portugal's first satellite, launched 12 years ago, will be turned over to Amateur Radio use in the very near future. That was the word July 30 from AMSAT-UK Secretary Jim Heck, G3WGM, during the AMSAT-UK International Space Colloquium in Guildford, England.

Launched September 25, 1993, the satellite operated as a packet store-and-forward BBS (9600 baud FM FSK) on Amateur Radio frequencies for several weeks in early 1994. Over the years, PO-28's primary usage has been commercial, although plans have called for eventually shifting its operation to ham radio use. G3WGM reports that following lengthy negotiations it has been agreed that the satellite can be switched permanently to amateur frequencies. The changeover is expected to take a couple of weeks.

The Portuguese satellite was built at the University of Surrey as part of a collaborative satellite technology program that involved industry and academe. Uplink frequencies will be 145.925 and 145.975 MHz. Downlink frequencies will be 435.250 and 435.275 MHz. More information on PO-28 is on the AMSAT Web site http://www.amsat.org/amsat/sats/n7hpr/po28.html.

Uplink Frequencies: 145.925 and 145.975 MHz
Downlink Frequencies: 435.250 and 435.275 MHz

Orbit: 822 x 800 km, 98.6 deg inclined, sun-synchronous.

Transponder capabilities include FM repeater and 38k4 data. If you want to hear how loud this satellite is, listen on 429.950 until the change back to amateur radio service.

Keplerian elements for PO-28 are not currently contained in the AMSAT keps bulletins, but can be found at Celestrak in amateur.txt using the name "POSAT". Users of Space Track should query the NORAD Satellite ID number 22829. The name listed by Space Track is "EYESAT A".

More information of POSAT-1 can be found at:
http://www.ee.surrey.ac.uk/SSC/CSER/UOSAT/missions/posat1.html
http://www.amsat.org/amsat/sats/n7hpr/po28.html
[ANS-WSR wishes to thanks Trevor, M5AKA and Jim, G3WGM, for this week's information.]

=====

AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio anand telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at:
http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

=====
PHASE 3E ?O-??
Catalog Number:
Proposed Launch Date: Early 2006

Status: Under Construction

William Leijenaar, PE1RAH reports on July 16th, 2005:

Hi AMSATs,

I always like to inform the AMSATs public about my P3e work, but unfortunatly due to
some reasons there was not much time and nothing much to say...

However, now I am happy to announce that the my MODE-UV transponder design for P3e is ready at the P3e integration place in Marburg (Germany). About 4 weeks ago I was in Marburg before, where the transponder has been checked. Unfortunatly some unsure things were found in the design. The unsure things were about long term stability after many years in space.

At home in The Netherlands, I changed the design with some minor changes to have a secure long term stability. Finally I tested the transponder again and it performed well within the specifications. Again something learned for future transponder designs :o)

Last Wednesday I drove to AMSAT-DL P3e integrations place in Marburg again, and have my transponder again checked. In the beginning it seemed that the 70cm receiver lost 10dB in sensetivity. After some more measurements we find out that it was due to a bad attenuator we used for protection at the input.

Together with Karl Meinzer we looked for any problems, but so far we could see (without HELAPS) all was okay. In the afternoon I went back home again, this time without the MODE-UV.

Now the MODE-UV will get a new home, the home of P3e... :o)
I hope the transponder will work like its elder sister in AO-10, and you all will enjoy it for many years...

It was lots of work to get it this far, but I know it is for a good purpose...

For the latest project status update please visit the AMSAT-DL
P3-E web page:
http://www.amsat-dl.org/p3e/

[ANS-WSR wishes to thank William Leijenaar, PE1RAH for this week's report]

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

- AMSAT News Service (ANS)
- General satellite discussion (AMSAT-BB)
- Orbit data (KEPS)
- Manned space missions (SAREX)
- District of Columbia area (AMSAT-DC)
- New England area (AMSAT-NE)
- AMSAT Educational Liaison mailing list (AMSAT-EDU)
- AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satelite Report Editor is James K. Darrow, KB9MMC.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:
ans-editor{at}amsat.org

HamPoll is here in order to give amateurs a chance to speak for themselves, and in time to provide reasonably accurate and significant polling data on a variety of issues related to the amateur radio service.

You are welcome to browse the polling data we have, but we especially encourage US amateurs visiting here to register with thier callsign and vote in the HamPoll Polling Station.

Whether you come to browse, to discuss or submit new polls, or to tender your vote, be sure to visit regularly as new polls are included from time to time, and the poll data changes as more hams participate day to day.

Stop by at: http://www.hampoll.com

AMSAT NEWS SERVICE
ANS-240

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:

ans-editor@amsat.org

In this edition:

* AMSAT Symposium
* HAMSAT Reports Needed
* AMSAT Election Deadline Approaching
* ARISS Status - 28 August 2005
* Volunteer Station Needed

```

   From AMSAT HQ SILVER SPRING, MD.
  August 28, 2005
  To All RADIO AMATEURS
  BID: $ANS-240.01
```

Remember that the "AMSAT rate" at the Holiday Inn in Lafayette runs out September 22, 2005. Please book through the AMSAT block.

And if you pre-register you save $ 10 and you can do it online: http://www.amsat.org/amsat-new/symposium/.

The Symposium is Oct 7th thru Oct 9th in Lafayette, LA. Home of the Silicon Bayou.

AGENDA FOR THE 2005 AMSAT-NA SPACE SYMPOSIUM and ANNUAL MEETING

Thursday October 6, 2005
Morning
8 am-noon AMSAT Board Meeting
noon-1 pm AMSAT Board Lunch Break

Afternoon
1 pm-5 pm AMSAT Board Meeting
5 pm-6pm AMSAT Board Dinner Break

Evening
6 pm-9 pm AMSAT Board Meeting

Friday October 7, 2005
Morning
8 am-noon AMSAT Board Meeting

Afternoon
1 pm-5 pm AMSAT Symposium

Evening
5:30 pm Shrimp Boil
7:30 pm President's Club Meeting

Saturday October 8, 2005
Morning
8 am-noon AMSAT Symposium
noon-1 pm Lunch on own

Afternoon
1 pm -1:30 pm Awards Ceremony
1:30-4 pm AMSAT Symposium
4 pm-5 pm AMSAT Annual Meeting

Evening
7-7:30 pm Attitude Adjustment
7:30-10 PM Banquet

Sunday, October 9, 2005
Morning
7 am-9:00 am   Area Coordinators Breakfast
7:00 am First Swamp Tour
9:30 am Second Swamp Tour
11:00 am IARU Meeting

Spouse Program on Saturday
Depart 9:30 AM

1st stop - Vermillionville - Vermillionville is a replica of an Acadian village of the early 18th century. This is similar to Williamsburg, VA, where the staff is in costume and the craft persons make arts and craft items with period tools. This depicts the life of the Acadian living on the bayous and gives a flavor of the culture and hardship of living in Acadiana in the 1800s. It will take about 90 minutes to see the exhibits.

2nd stop - The Cathedral Oak - This is a 200 year old oak tree where the canopy is way over 100 feet in diameter.

3rd stop - The Mouton Home - This is the home of the founder of Lafayette and is a typical home of the period.

4th stop - Hotel - The group should return to the hotel at approximately 1:00 PM.

Lagniappes - Departs the hotel at 1:15 For those hardy shoppers who have the energy and the desire, there will be a visit to a local flea market where there is marketing of arts and crafts made by craft persons of the area. This group will return to the hotel at approximately 3:00 pm.

There will be a nominal cost of approximately $20 to cover the transportation cost and entrance fees.

A late addition to the agenda for the Amsat Symposium in Lafayette is a meeting of the Eagle project team. This meeting will also be open to all other interested AMSAT members.

If you are an AMSAT member, not on the Eagle team, and would like to attend, please advise wb4gcs@amsat.org. All AMSAT members are welcome, we'd just like to know who and how many are attending, so we can be prepared.

[ANS thanks the AMSAT Symposium team & Martha for the above information]

SB SAT @ AMSAT $ANS-240.02
HAMSAT Reports Needed

AMSAT News Service Bulletin 240.02
From AMSAT HQ SILVER SPRING, MD.
August 28, 2005
To All RADIO AMATEURS
BID: $ANS-240.02

Hi All
One of the members of the Mission Management Board at ISTRAC called me this afternoon to enquire about the latest feedback on Hamsat usage around the globe.
I request you to kindly send in your feedback reports to reports@amsat.in as this will help the MMB ISTRAC to complie the latest reports & payload evaluation in time before their meeting scheduled for 29 Aug 2005.

[ANS thanks VU2POP, Pop, for the above information]

/EX

SB SAT @ AMSAT $ANS-240.03
AMSAT Election Deadline Approaching

AMSAT News Service Bulletin 240.03
From AMSAT HQ SILVER SPRING, MD.
August 28, 2005
To All RADIO AMATEURS
BID: $ANS-240.03

Your votes do count.

With the deadline for the receipt of ballots for the AMSAT Board of Directors less than a month away, Bill Hook, W3QBC, who heads up AMSAT's Ballot Counting Committee, advises that to date only 609 ballots have been received. This amounts to only 15% of the total number of ballots mailed to members.

Votes are needed to select the 4 best qualified to serve among the 8 candidates. The biographical information as submitted by the Candidates can be found on the AMSAT website at
http://www.amsat.org/amsat-new/AboutAmsat/candidate_bios.php

To be counted, ballots must be received at the AMSAT office before the close of business on Thursday, 15 September 2005.

[ANS thanks Bill W3QBC for the above information]

SB SAT @ AMSAT $ANS-240.04
ARISS Status - 28 August 2005

AMSAT News Service Bulletin 240.04
From AMSAT HQ SILVER SPRING, MD.
August 28, 2005
To All RADIO AMATEURS

BID: $ANS-240.04

ARISS Status
August 28, 2005

1. Arizona Contact a Success!

On Wednesday, August 17, the children at D.W. Higgins Institute in Tempe, Arizona, experienced an ARISS contact with John Phillips, KE5DRY. The astronaut was able to answer 23 of the 24 questions posed to him by twelve students before the ISS went over the horizon. An audience of approximately 200 students, teachers, and others witnessed the contact. Special guests attending the event included the mayor of Tempe, Phillips' parents and his sister, Maura Mackowski, whose son, Ben, is a sixth grader at the school. Mackowki was impressed with the Q & A session and wrote a thank you note to JSC, expressing her gratitude for a job well done, noting Steve Bible, N7HPR, in particular, for setting up and working his radio during the contact.
Among the media present were two television channels (5 and 12) and two news papers, The Arizona Republic and East Valley Tribune.

Arizona Republic's article, "Tempe students radio space station, talk to astronaut," may be found at:
http://www.azcentral.com/families/education/articles/0817t-space-ON.html

East Valley Tribune ran a story, "Students use radio to chat with astronaut in orbit." See:
http://www.eastvalleytribune.com/index.php?sty=46392

The Channel 12 news video clip of the event, "Students speak with astronauts aboard International Space Station," is available for viewing. See:
http://www.azcentral.com/12news/video/12video_index.html

2. Upcoming School Contacts

The Sapporo Junior Amateur Radio Club in Sapporo, Kokkaido, Japan has been scheduled for a contact on Monday, August 22 at 14:26 UTC.

The 2005 World Expo in Aichi, Japan has been approved for an ARISS contact. It has been scheduled for Friday, September 2 at 09:45 UTC.

3. ARISS International Meeting

ARISS delegate Rosalie White has submitted minutes from the U.K. meeting to the other delegates for comments. Once finalized, they will be posted to the ARISS and AMSAT websites.

The next ARISS International Teleconference will be held on Tuesday, August 23.

4. ARRL Article on Krikalev

On August 12, the ARRL ran a web story on Sergei Krikalev, U5MIR. "ISS commander sets new space endurance record" is posted on the website.
See: http://www.arrl.org/

5. SSTV Safety Review Held

On Friday, August 19, the JSC Payload Safety Review Panel (PSRP) met with members of ARISS-U.S. to discuss the certification of the SSTV/Vox box and two cables which the ARISS-U.S. team is providing to the project. Once the ARISS team submits supporting documentation, the certification document will be signed. The Russian team will provide the webcam and will provide the safety certification for the integrated system. The SSTV is expected to fly on 19P which is scheduled for a September launch.

6. Space Tourist Issued Callsign

Greg Olsen took and passed his amateur radio exam on Friday, August 12, and was issued the callsign, KC2ONX. Olsen, slated to be the next space tourist, will fly with Expedition 12 crew members, Bill McArthur, KC5ACR, and Valery Tokarev in October. Sergey Samburov, RV3DR, will provide training on the ARISS radio system and operations so that he may participate in school contacts while on board the ISS. ARRL ran an article on Olsen, entitled, "Next ISS 'Space Tourist' Gets Amateur Radio Ticket." See: http://www.arrl.org/news/stories/2005/08/18/3/?nc=1

[ANS thanks Carol, KB3LKI for the above information]

/EX

SB SAT @ AMSAT $ANS-240.05
Volunteer Station Needed

AMSAT News Service Bulletin 240.05
 From AMSAT HQ SILVER SPRING, MD.
August 28, 2005
To All RADIO AMATEURS
BID: $ANS-240.05

Here is your chance to become a viable part of the Amateur Satellite Community.

We are looking for a volunteer satellite packet station in Hawaii that is interested in helping with telemetry and sat-gating of PCSAT2 and ARISS packets. Requirements are:

1) General familiarity with packet
2) TNC connected to a cross band radio that
     can RX on UHF and TX on VHF.
3) modest UHF beam and rotator system.

Contact WB4APR for more information.

[ANS thanks Bob, WB4APR, for the above information]

/EX

In addition to regular membership, AMSAT offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT Office.

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating
          procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that SO-50 has
shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The
order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm
   the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT
   the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window
   will reset the 10 minute timer.

[09122004]
=====
FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

John, N4QWL reports on July 16th, 2005:

Last evening I had a AOS to LOS qso with WI2W. FO-29 came up at 01:17z here in FM07 and I found WI2W and we chatted until 01:33z. The satellite was at 2 degrees elevation when I finally heard him start to crackle a bit. What a great QSO! To think that I watched this bird launch back in 1996 and it is still working so well is a real thrill. I believe I still have the video. I might just look for it and watch it again. Boy do I love this satellite stuff! Look for you all up there.

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will automatically analyze all digital telemetry from the satellite (such as current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[ANS-WSR wishes to thanks John, N4QWL for this week's report]

INTERNATIONAL SPACE STATION (ISS) - ARISS
Catalog number: 25544
Launch date: November 20, 1998

Status: Operational
Current Mode: U/V CROSS-BAND REPEATER
Digipeater: Inactive

The current Expedition 11 crew is:
Commander Sergei Krikalev
Flight Engineer John Phillips

Worldwide packet uplink: 145.990 MHz FM
Region 1 voice uplink: 145.200 MHz FM
Region 2/3 voice uplink: 144.490 MHz FM
Worldwide downlink: 145.800 MHz FM

Repeater Uplink: 437.800 MHz FM
Repeater Downlink: 145.800 MHz FM
Doppler Shift is 10 KHz

Russian callsigns: RS0ISS, RZ3DZR
USA callsign: NA1SS
Packet station mailbox callsign: RS0ISS-11
Packet station keyboard callsign: RS0ISS-3
Digipeater callsign: ARISS

This off the ARISS webpage:
http://www.rac.ca/ariss/oindex.htm#New%20ARISS%20Operations :
The ARISS program is pleased to announce that the amateur radio equipment aboard the International Space Station is now operating in cross-band repeat mode. We realize that many of you will miss the packet-operating mode. However, cross-band repeat allows further experimentation of the ISS amateur radio system

The downlink for this operating mode remains the same, so listen for the station on 145.80 MHz. The new uplink frequency is 437.80 MHz. All frequencies are subject to Doppler shifting. For further information on working satellites and adjusting for Doppler shift, please review Emily Clark's (W0EEC) excellent

presentation on AMSAT's website:
http://www.amsat.org/amsat-new/information/faqs/Intro_sats.pdf

The ISS daily crew schedule can be found at:
http://spaceflight.nasa.gov/station/timelines/
Remember that the crew operates on UTC time. Also, all of the time line is NOT
translated from Russian and posted.

SB SAT @ AMSAT <KB9MMC $ANS-240.S2
WSR 240 Part 2 08/28/2005

AMSAT NEWS SERVICE BULLETIN 240.S2 FROM AMSAT HQ
SILVER SPRING, MD, AUGUST 28, 2005
TO ALL RADIO AMATEURS
BID: $ANS-240.S2

PCSAT2 ?0-??
Catalog Number:
Launch Date: August 1, 2005

Status: Operational

PCSAT2 was installed on the exterior of the International Space
Station and was activated on August 3, 2005.

PCSAT2 CAPABILITIES: PCSAT2 is attached to the ISS and so its operations
must be in cooperation with the ARISS communications suite to minimize any
mutual interference and to coordinate activities. Here are the capabilities
of the PCSAT2 and ARISS payloads:

PCSAT SYSTEM A:

435.275 PCSAT2 DOWNLINK 1200 baud packet with uplink on 145.825
435.275 PCSAT2 DOWNLINK Occasional user PSK-31 continuous downlink
145.825 PCSAT2 DOWNLINK 1200 baud packet
PCSAT SYSTEM B:

437.975 PCSAT2 DOWNLINK periodic Solar Cell data and PCSAT2 telemetry at 9600 baud
437.975 PCSAT2 DOWNLINK TNC-B command downlink at 1200 baud
437.975 PCSAT2 DOWNLINK User Voice Repeater with VHF uplink
437.975 PCSAT2 DOWNLINK Packet digipeater with VHF uplink

It looks like PCSAT2 can best contribute at this time by operating in PSK-31 mode for the near future. This is a very exciting new transponder mode which solves the congestion problem on FM repeaters by letting multiple stations all communicate at the same time.

PSK-31 users are welcome to try out the new PCSAT2 PSK-31 transponder on ISS with an uplink on 29.402 +/- 1 KHz and downlink on 435.275 +/- Doppler using FM.

The FM downlink lets everyone operate full duplex and everyone to see the same view of the passband as everyone else. THus you can see exactly what your signal looks like to everyone else.

Help Wanted:

Here is your chance to become a viable part of the Amateur Satellite Community.

We are looking for a volunteer satellite packet station in Hawaii that is interested in helping with telemetry and sat-gating of PCSAT2 and ARISS packets. Requirements are:

1) General familiarity with packet
2) TNC connected to a cross band radio that
     can RX on UHF and TX on VHF.
3) modest UHF beam and rotator system.

Contact WB4APR for more information.

Packets seen from PCSAT2 can be reviewed at:
http://www.findu.com/cgi-bin/pcsat2.cgi

A screen shot of both the 9600 bps and 1200 bps decoded data as seen by Simon, 9W2QC, can be seen at:
http://www.9w2qc.net/pcsat2/

More information on PCSAT2 can be found at:
http://web.usna.navy.mil/~bruninga/pcsat2.html

[ANS-WSR thanks Bob, WB4APR and the U.S. Naval Academy Satellite Lab for the aboveinformation.]

=====
NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Non-Operational?????

Uplink/downlink: 145.827 MHz 1200 baud AX.25 AFSK via W3ADO-1
Aux/Uplink: 435.250 MHz 9600 baud via PCSAT-2 (off)
APRS Downlink: 144.390 MHz (Region 2)

PCSat is a 1200-baud APRS digipeater designed for use by stations using
hand-held or mobile transceivers. Downlinks feed a central web site at:
http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy
under the guidance of Bob Bruninga, WB4APR.
[07242005]
=====
CUTE-1
Catalog number: 27844
Launched: June 30,2003

Status: Operational

Uplink: ?

Downlink: 436.8375 CW
              437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ?)
Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as
OPERATIONAL?
Indeed it is very operational as a CUBESAT sending CW telemetry on
436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at 14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz. Initial orbital parameters were period 101.4 min, apogee 831 km, perigee 819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

[ANS WSR wishes to thank Cliff, K7RR, for this week's information]

[05092004]

=====

UO-11 OSCAR-11
Catalog number: 14781
Launched: March 1, 1984

Status: Semi-operational?

Telemetry Downlink: 145.826 MHz. FM (1200-baud AFSK).
approx. 10 days ON, 10 days OFF
Mode-S Beacon: 2401.500 MHz. ... OFF
UHFBeacon: 435.025 MHz. ... OFF

OSCAR-11 is back! I received the good news, on Saturday morning, while at the AMSAT-UK Colloquium. This was entirely unexpected! On Sunday morning Bob G4VRC played me a recording of an early morning pass received that day.

During the period 21 July to 14 August 2005 consistent signals have been heard from 30 July to 08 August. Signals seem to be weaker than usual, confirmed by the many reports received. However,since I last heard the satellite on 30 April, I've reinstalled my antennas , which makes comparisons difficult.

Many thanks for all the recent reports of OSCAR-11 including those from

KU7Z (who heard it first), KB2M, VK6XH, HK7MKE, KA2UPW, JE9PEL, G1OCN, HB9SKA and G8OQW.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working. One bit in channel 62, DSR mode, has changed from WRITE to READ. DSR is the Digital Store & Readout experiment. This could be significant if the experiment is still drawing current, but the other status bit indicates that it is switched OFF.

The on-board clock is now showing a very large error. It has lost approximately 19 days since 30 April. During the recent data collection period, the clock error has been changing at a decreasing rate. The size of the clock error and the rate at which it is changing is similar to the duration of the solar eclipse periods. This suggests that the clock might have been switching OFF during eclipses.

The eclipses have now ended, and the satellite should be in continuous sunlight for the remainder of this year, and well into next year. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures.

If the watchdog timer is still operating on a 20 day cycle, ie. approximately ten days ON followed by 10 days OFF, then the VHF beacon should resume transmissions around 18 August.

The Beacon frequencies are -

VHF 145.826 MHz. AFSK FM ASCII Telemetry

UHF 435.025 MHz. OFF

S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is www.users.zetnet.co.uk/clivew/

If you place this bulletin on a terrestrial packet network, please use the bulletin identifier $BID:U2RPT112.CWV, to prevent duplication.

[ANS-WSR thanks Clive, G3CWV, for the above information]

SB SAT @ AMSAT <KB9MMC $ANS-240.S3
WSR 240 Part 3 08/28/2005

AMSAT NEWS SERVICE BULLETIN 240.S3 FROM AMSAT HQ
SILVER SPRING, MD, AUGUST 28, 2005
TO ALL RADIO AMATEURS
BID: $ANS-240.S3

THE FOLLOWING ARE IN ORBIT BUT ARE
NON-OPERATIONAL AT THIS TIME:

POSAT-1 PO-28
Catalog Number: 22829
Launched : September 25, 1993

Status: Operational - Not open for Amatuer use

Downlink: 435.250 MHz
          435.275 MHz

Uplink: 145.925 MHz
          145.975 MHz

Broadcast callsign: POSAT1-11
BBS callsign: POSAT1-12

PO-28 (POSAT-1), Portugal's first satellite, launched 12 years ago, will be turned over to Amateur Radio use in the very near future. That was the word July 30 from AMSAT-UK Secretary Jim Heck, G3WGM, during the AMSAT-UK International Space Colloquium in Guildford, England.

Launched September 25, 1993, the satellite operated as a packet store-and-forward BBS (9600 baud FM FSK) on Amateur Radio frequencies for several weeks in early 1994. Over the years, PO-28's primary usage has been commercial, although plans have called for eventually shifting its operation to ham radio use. G3WGM reports that following lengthy negotiations it has been agreed that the satellite can be switched permanently to amateur frequencies. The changeover is expected to take a couple of weeks.

The Portuguese satellite was built at the University of Surrey as part of a collaborative satellite technology program that involved industry and academe. Uplink frequencies will be 145.925 and 145.975 MHz. Downlink frequencies will be 435.250 and 435.275 MHz. More information on PO-28 is on the AMSAT Web site http://www.amsat.org/amsat/sats/n7hpr/po28.html.

Uplink Frequencies: 145.925 and 145.975 MHz
Downlink Frequencies: 435.250 and 435.275 MHz

Orbit: 822 x 800 km, 98.6 deg inclined, sun-synchronous.

Transponder capabilities include FM repeater and 38k4 data. If you want to hear how loud this satellite is, listen on 429.950 until the change back to amateur radio service.

Keplerian elements for PO-28 are not currently contained in the AMSAT keps bulletins, but can be found at Celestrak in amateur.txt using the name "POSAT". Users of Space Track should query the NORAD Satellite ID number 22829. The name listed by Space Track is "EYESAT A".

More information of POSAT-1 can be found at:
http://www.ee.surrey.ac.uk/SSC/CSER/UOSAT/missions/posat1.html
http://www.amsat.org/amsat/sats/n7hpr/po28.html
[ANS-WSR wishes to thanks Trevor, M5AKA and Jim, G3WGM, for this week's information.]

John, KD6PAG reports on June 16, 2004 to ANS:
RS-15 beacon seemed to be back in the mode where it's a tone about 5 seconds
off and then 5 seconds on this morning.

ANS is looking for more confirmations of RS-15 coming back.

[ANS thanks John, KD6PAG for RS-15 information]

=====
PO-34 PANSAT
Catalog number: 25520
Launched: October 30, 1998

Status: Telemetry downloads only

Uplink/downlink frequency (listed on the PanSat web site) 436.500 MHz

The satellite is not available for general uplink transmissions.

The Naval Postgraduate School developed PanSat. At the time of
launch, PanSat spread-spectrum digital transponders were to
be available to Amateur Radio operators along with software to utilize
this technology.

The satellite is still operating, however, the spread spectrum packet
radio portion never took place. The spacecraft is now beyond it's
initial 2-year mission life, but telemetry records are still being
downloaded.

For more information, visit the official PanSat web site at:
http://www.sp.nps.navy.mil/pansat/
[05092004]
=====
SO-33 SEDSAT-1
Catalog number: 25509
Launched: October 24, 1998
```

```
Status: Semi-operational

Downlink: 437.910 MHz FM (9600-baud FSK)

The satellite is not currently available for uplink transmissions and
the image and transponder recovery efforts have been unsuccessful.

For more information on SedSat-1 visit the satellite web site:
http://seds.uah.edu/projects/sedsat/sedsat.htm

[ANS has no further information]
[05232004]
=====
SO-35 SUNSAT

AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio anand telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at:
http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

AMSAT NEWS SERVICE BULLETIN 240.S4 FROM AMSAT HQ
SILVER SPRING, MD, AUGUST 28,2005
TO ALL RADIO AMATEURS
BID: $ANS-240.S4

THE FOLLOWING SATELLITES ARE NOT IN ORBIT BUT ARE PROPOSED FOR LAUNCH AT THIS TIME:

UCISAT ?O-??
Catalog number:

Proposed Launch Date: October 31, 2005

Status: Under Construction

Downlink: Submission in Progress
Uplink: Submission in Progress
Callsign: Submission in Progress

This from Matt Bennett, KF6RTB, UCISAT Communications Team Member:

Our website is www.ucisat.net .This is a new website, however, and doesn't have the "Status" section active yet. Because of the growing interest in our project, I'll push our webmaster to create updates (hopefully) on a week-to-week basis. For now, the current status of the mission is as follows:

-Expected Launch Date: October 31st, 2005
-Frequency Allocation: Submission in Progress
-Construction Status: Sub-Assembly
[WSR to thank Matt Bennett, KF6RTB, for this week's report.]
[01302005]
=====
SSETI ?O-??
Catalog Number:
Proposed Launch Date: LATE 2005

Status: AWAITING LAUNCH

Graham, G3VZV reports:
We have now been advised that the revised launch date for SSETI Express and the other satellites on the DMC3 COSMOS launch has been confirmed as September
27th - so please keep those fingers crossed!

SpaceDaily has a report about SSETI at:
http://www.spacedaily.com/news/internet-04zzzu.html

You can find more info about SSETI at:
http://sseti.gte.tuwien.ac.at/WSW4/

Looking at the website for the SSETI Express webcam
http://sseti.gte.tuwien.ac.at/WSW4/webcam.htm

[ANS thanks Graham, G3VZV for the above information]
[07312005]
=====
PHASE 3E ?O-??
Catalog Number:
Proposed Launch Date: Early 2006

Status: Under Construction

William Leijenaar, PE1RAH reports on July 16th, 2005:

Hi AMSATs,

I always like to inform the AMSATs public about my P3e work, but
unfortunatly due to
some reasons there was not much time and nothing much to say...

However, now I am happy to announce that the my MODE-UV transponder design for P3e is ready at the P3e integration place in Marburg (Germany). About 4 weeks ago I was in Marburg before, where the transponder has been checked. Unfortunatly some unsure things were found in the design. The unsure things were about long term stability after many years in space.

At home in The Netherlands, I changed the design with some minor changes to have a secure long term stability. Finally I tested the transponder again and it performed well within the specifications. Again something learned for future transponder designs :o)

Last Wednesday I drove to AMSAT-DL P3e integrations place in Marburg again, and have my transponder again checked. In the beginning it seemed that the 70cm receiver lost 10dB in sensetivity. After some more measurements we find out that it was due to a bad attenuator we used for protection at the input.

Together with Karl Meinzer we looked for any problems, but so far we could see (without HELAPS) all was okay. In the afternoon I went back home again, this time without the MODE-UV.

Now the MODE-UV will get a new home, the home of P3e... :o)
I hope the transponder will work like its elder sister in AO-10, and you all will enjoy it for many years...

It was lots of work to get it this far, but I know it is for a good purpose...

For the latest project status update please visit the AMSAT-DL
P3-E web page:
http://www.amsat-dl.org/p3e/

[ANS-WSR wishes to thank William Leijenaar, PE1RAH for this week's report]

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins trans-

mitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satelite Report Editor is James K. Darrow, KB9MMC.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:
ans-editor{at}amsat.org

> carefully! Realize that you are gambling with your humanity. Once you sign
> that form, you sign away your right to say: "No, that is an atrocity." You
```

> put your abilities, including the ability to kill, at the disposal of proven liars, psychopaths . . . enemies of humanity. Do you think that every German soldier in World War II who helped load Jews into cattle cars was a cold-blooded killer? Most were poor kids, just like you, who got caught up in the patriotic frenzy. Once you're in, you're IN. You lose the ability to stop killing until they tell you so. This not only makes you less than human, it makes you less than an animal, for even the animals retain their freedom of self determination.
>
> The second group are the simple minded, who fall for patriotic entreaties about defending democracy, Mom, apple pie; in other words, all the traditional government propaganda. Do you think Soviet lads subjugated their neighbors throughout the world because they thought the Soviet Union was an EVIL empire? No, they were fighting for MOM, and whatever passes for apple pie in Russia. Step back and examine the lies your government is handing you, and ask yourself if they have the ring of truth. Do you want to be one of the murderers in uniform who opened up on their fellow citizens at Kent State? When you put on that uniform, you give up all autonomy, and become nothing more than a weapon, to be used for whatever evil purposes the scoundrels in government demand (and, if you look carefully, you will discover that the only interests THEY serve are those of the big businesses that own them.)
>
> Finally, you have the hard-core psychopaths. These are the people who WANT to kill. Murder, torture, rape; THESE are the American values upon which THIS group is focused. The cause doesn't matter, they're after the thrill that only warfare can provide.
>
> Just remember: killing for George W. Bush, or for George H.W. Bush, or for Lyndon B. Johnson, or for Richard M. Nixon is not the same as defending yourself, your family, your friends, or your country. Don't be a dupe. Don't Enlist!
>
> Remember -- supporting the troops means supporting Bush aggression, profiteering, and war crimes. Here's an idea: why not take those ribbons, dip them in blood, and mail them to the White House?

```

I noticed you left out Clinton (the Balkan's) and Kennedy (Vietnam).

This means you are not being logical within your own argument.

Your motives are now in question.

Sorry, but you will have to try harder next time, which I am reasonably confident you will (try agian).

PS, what is your country doing to help with our existing crisis? I know its a bit early, but we have a real mess on our hands.

Regards

Chris

Hmmmm

Me thinks you are confusing Terrorist with the President.

"That said, the Canadian Red Cross is reportedly allowed into the area."

By the way, Thanks!

The press here is so fubar'd we have no idea that anyone from the outside even cares except of course Chavez. Friends of Castro are friends indeed.

Thank goodness Kerry is not in charge, what a photo op, from his yacht. :-)

Chris

Vancouver's Urban Search and Rescue Team is currently in Louisiana to assist in the search and rescue efforts in the areas of the state ravaged by Hurricane Katrina. The team was deployed on August 31 and is working with the Louisiana State Troopers and the U.S. National Guard.
http://www.city.vancouver.bc.ca/usar/

Canadian warships to sail to Louisiana

Three Canadian warships, a coast guard vessel and three Sea King helicopters will be sent to Louisiana on Tuesday with relief supplies for the U.S. Gulf Coast.

Its local government responsibility to evacuate, I noticed school busses just sitting parked, the mayor blew it, future planning would help next time, I recommend, don't build your house below sea level, and require a education, notice it was mostly un educated that lacked money to evacuate.

Hello Tony,

Thanks for your reply.

And thanks to your country men coming in to assist.

Other than Cuba and Venezuela, the press here was not listing any of the MANY countries trying to provide aid, till today.

As I am getting information from the ground around the area, the problem seems to be fuel. Aid arriving is captured because there is no gas to get back out. The infrastructure is broken in not providing logistical help to the aid providers.

Just information for those going in, bring enough fuel to get back out with the precious cargo you will be coming back out with.

I would think MIDCARS would be a good source for updates to this situation.

Warmest Regards,

Chris

AMSAT NEWS SERVICE
ANS-247

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:

ans-editor@amsat.org

In this edition:

* Symposium News from AMSAT President
* Katrina Assistance
* ARISS Status August 29, 2005
* SSETI Express - Four Weeks Until Lift-Off
* PCSAT2 Mode Change
* North Texas Balloon Project Launch #14

SB SAT @ AMSAT $ANS-247.01
Symposium News from AMSAT President

AMSAT News Service Bulletin 247.01
From AMSAT HQ SILVER SPRING, MD.
September 4, 2005
To All RADIO AMATEURS
BID: $ANS-247.01

I received many panicked phone calls and e-mails today regarding the upcoming AMSAT Annual meeting, which also includes a Board of Directors meeting before the Symposium and IARU and Eagle Team meetings afterwards. Some of you have tried to call the hotel without success. Others have realized that their decision to fly to New Orleans and drive was flawed as the airport is under water only to find the airlines gouging you with high fees to change a "non-refundable ticket" that they can't honor anyway.

The hotel is 100 miles West of New Orleans and therefore was spared the brunt of the storm and the resultant devastation. However, refugees are filling up hotels up to 300 miles away and many will not be returning any time soon. I fear that our Symposium may be doomed but I do not know for sure.

Over the next several days AMSAT officials will be evaluating the situation in Lafayette LA and will be considering alternatives. We have already had one offer to try to host the Symposium in Dayton Ohio. Moving the symposium and associated meetings at this late date would be a Herculean task and may cost everyone significant extra air fare fees. The airlines have added major fuel cost surcharges and are sticking with the extra fees for exchanging tickets.

Please do not change or cash in tickets yet. The hotel is no longer accepting any reservations, even at the national 800 number.

If there are any other volunteers willing to try to host this event with no time to prepare and thousands of details to manage please contact our VP of Marketing and User Services, Barry Baines, WD4ASW at wd4asw@amsat.org or AMSAT's Manager, Martha Saragovitz at martha@amsat.org.

Remember, we don't know for sure that we must change anything so wait until there is a final announcement before making any changes.

Rick Hambly, W2GPS
AMSAT President

[ANS thanks Rick, W2GPS for the above information]

SB SAT @ AMSAT $ANS-247.02
Katrina Assistance

AMSAT News Service Bulletin 247.02
From AMSAT HQ SILVER SPRING, MD.
September 4, 2005
To All RADIO AMATEURS
BID: $ANS-247.02

We are all concerned about the people in the path of Katrina's destruction. Many of us have friends or family in the area, others have friends and co-workers who have friends or family in the area. At this time, information into and out of the affected areas is sporadic. Our fellow hams are overloaded with requests for food, water and rescue.

If you need to locate someone visit: http://www.satern.org/ and complete the health and welfare information request. This group is also on the air on 14.265. SATERN has the ability to hold the messages and to handle delivery when information can get to the affected area. Don't forget to provide the last known address of the person you are looking for as well as the area they may have evacuated to.

Here's how YOU can help now. Keep frequencies with any kind of relief traffic clear -- that means listen only, don't be a policeman. Offer to handle the internet input or the HF traffic to SATERN from your area for those without internet access or HF privileges. Try a text message via cell phone. Have patience.

If you want to go to the area to assist with communications or other activities, contact the Red Cross or other relief agencies FIRST. They have required training courses before you can be deployed so do not be surprised if you are told no. Donate money. Most importantly, DO NOT ATTEMPT TO TRAVEL TO THE AREA ON YOUR OWN.

[ANS thanks Sherri, W4STB for the above information]

/EX

SB SAT @ AMSAT $ANS-247.03
ARISS Status August 29, 2005

AMSAT News Service Bulletin 247.03
From AMSAT HQ SILVER SPRING, MD.
September 4, 2005
To All RADIO AMATEURS
BID: $ANS-247.03

1. Sapporo Contact Successful

The Sapporo Junior Amateur Radio Club in Sapporo, Kokkaido, Japan experienced a successful contact with the ISS on Monday, August 22. Thirteen students asked 19 questions of John Phillips, KE5DRY, as high school student Jun Maeda, JL8AQH, manned the radio. Approximately fifty people attended the event, which was covered by three newspapers and two television stations.

2. ARISS International Meeting

The monthly ARISS International Teleconference was held on Tuesday, August 23. Among the items discussed were the SuitSat project, the SSTV status, PCSAT2, and the Exploration Initiative. The next ARISS International Meeting will be held on September 20.

3. ARRL Article on ARISS Delegate Rosalie White

On August 22, ARRL ran a web story on ARRL Field and Educational Services Manager, Rosalie White. Rosalie has returned to her home state of Indiana to help with family issues, but she will continue to work with ARRL and ARISS. The story, "Rosalie White, K1STO, departs ARRL Headquarters, keeps connection," may be found at: http://www.arrl.org/

4. SuitSat and SSTV Shipped

Sergey Samburov, RV3DR, reports that the SuitSat hardware and the SSTV system have been packed and shipped to Baikonur Cosmodrome to be included on the next Progress flight, and that the crew has been trained in SuitSat assembly and radio operations. Progress 19P is scheduled to launch on September 8.

5. Crew Debrief

On Monday, August 22, the ARISS-U.S. team spoke with Andy Thomas, KD5CHF, about the general contacts he made using the ARISS radio system while on the ISS. Thomas had not been scheduled for any school contacts due the busy schedule of the STS-114 astronauts, but he did make time for a few general contacts over Australia and New Zealand, causing much excitement among the radio operators there.

6. ARISS Member Interviewed for Documentary

ARISS-Europe member, Carlos Eavis, G0AKI, was interviewed for the BBC Radio 1 documentary, "Radio Anyone." An article, "BBC Radio 1 documentary 'Radio Anyone' now on the web," was posted to the web and provides a link to the audio. To listen to the interview, go to:
http://www.southgatearc.org/news/aug2005/radio_anyone_audio.htm

7. ARRL Article on Arizona Contact

Students at D.W. Higgins Institute in Tempe, Arizona spoke with astronaut John Phillips, KE5DRY, on Wednesday, August 17. ARRL ran a web story on the contact, entitled, "Space QSO Provides Arizona Youngsters Something to Remember." See:
http://www.arrl.org/news/stories/2005/08/26/3/?nc=1

8. Cosmonaut Makes General Contacts

Sergei Krikalev, U5MIR, made several general contacts over the weekend. Stations in the U.S., Kuwait, Malaysia, and Australia reported speaking to the cosmonaut on Saturday, August 27, with some sending wishes for a happy birthday, as Krikalev turned 47.

[ANS thanks Carol, KB3LKI for the above information]

/EX

SB SAT @ AMSAT $ANS-247.04
SSETI Express - Four Weeks Until Lift-Off

AMSAT News Service Bulletin 247.04
From AMSAT HQ SILVER SPRING, MD.
September 4, 2005
To All RADIO AMATEURS
BID: $ANS-247.04

The launch date of September 27th and a lift-off time of 06:52:26 UTC now looks pretty certain for the Cosmos 3 rocket carrying SSETI Express with its three cubesat passengers and four other satellites into orbit.

Updated pre-launch keps will be made available in a few days time and there

are a number of web pages being developed to enable amateurs to locate SSETI Express, receive and download the telemetry and to forward it to Mission Control for their evaluation. Later in the mission it will also be possible for amateurs to transmit so-called "friendly" commands to request particular telemetry or thumbnail pictures.

The SSETI team and ESA - The European Space Agency, are very keen to recruit as many radio amateurs as possible around the world to capture the telemetry. Our worldwide "virtual groundstation network" is a unique facility which we can use to our benefit as well as theirs. By showing how well our network can substitute for their expensive professional one, we will really encourage them to include amateur transponder systems in their future missions.

ESA will be offering a very significant prize for the amateur who sends them the largest amount of telemetry during the mission and is also offering a unique "I heard it first" T shirt to the station that sends them the first report. This is actually likely to be one of the three Stations that we hope to having listening for SSETI Express in Antarctica - an ideal item of clothing for their forthcoming winter season!

The main mission site is being finalised and can already be accessed at www.sseti.net -- click on the "express mission operation web site" link. This has full details of the mission, the software, present orbital position and a host of other information.

There is also a Mission Control web site at:
http://www.express.space.aau.dk/?language=en&page=home
which will include a web cam of the control room and eventually the antennas and radio equipment.

AMSAT-UK will shortly be publishing the first edition of the SSETI Express Handbook which has been kindly edited by Richard, G3RWL. This will be available as a downloadable PDF file or, for a small fee, in a full colour printed version by post.

The SSETI Express launch campaign team will be setting off for Russia on Sept. 5th and will try to keep a good flow of up-to-date information flowing from the launch site.

Meanwhile there are two possibilities for joining the excitement of the Sept. 27th launch:

On ASTRA 1G which has coverage of most of Europe. The launch will be broadcast via ESA Television on ASTRA 1G at 19.2 degrees east:

Transponder: 1.108
Reception Frequency: 12551.50 mHz
Polarization: Vertical
Symbol Rate: 22Msymb/s
FEC: 5/6
TS_ID: 1108
ON_ID: 1
Service Name: ESA
Service provider: ASTRA
Service_ID: 12140
TXT: none

This is always on and will transmit an ESA logo starting three days before the launch. The programme is expected to run for approximately 30 mins and will include the launch sequence live from the Plesetsk launch site. The final programme timing will be announced by ESA nearer to the time.

On the Internet - World Wide Web

The ESA launch programme on ASTRA 1G will also be available as a web stream on the internet. The Home Counties Amateur Television Club operate an amateur television repeater (GB3HV) at High Wycombe in the UK and the output of this repeater is usually streamed onto the internet. They have kindly agreed to make this web stream service available to us for the launch period.

The web stream runs at about 210 Kbits/sec so a broadband internet connection will be required for a reliable relay. To access this web stream you need to have Windows Media Player and connect to mms://wm9.btrichmedia.com/hcatv. This service should be capable of serving a large number of users without difficulty.

This web stream operates on a 24/7 basis so it can be checked at anytime. Before the launch it may be displaying a variety of test cards, amateurs or other pictures. The display may take up to 30 seconds to appear and during the second half of every hour (from 30 mins to 59 mins after the hour) it will display a blank screen unless GB3HV is actually in use.

So we are nearly there! Please keep your fingers crossed for just a little longer so we can have a successful launch campaign.

More information will be relayed over the next few weeks but if the web sites listed do not give you the answers that you need about anything to do with SSETI Express please get in touch.

[ANS thanks Graham, G3VZV for the above information]

PCSAT2 Mode Change

AMSAT News Service Bulletin 247.05
From AMSAT HQ SILVER SPRING, MD.
September 4, 2005
To All RADIO AMATEURS
BID: $ANS-247.05

The PCSAT2 side-A system has been operated for 4 weeks in PSK-31 mode, and will now be changed from PSK-31 mode to UI/APRS Packet digipeater mode.

See: http://www.ew.usna.edu/~bruninga/pec/pc2ops.html

In this mode, the uplink is 145.825 and downlink is 435.275 +/- 10 kHz doppler to avoid any interference with the 145.800 ARISS operations. The system is 1200 baud with the callsign of PCSAT2 and alias of ARISS, so the same setting as you use for normal ARISS packet, should work here too if you use the ARISS alias.

Again, refer to the PCSAT2 operations page and the User Service Agreement for this mode. Specifically, unattended beacons are not authorized. The digipeater is for human communications, not blind beacons.

See: http://www.ew.usna.edu/~bruninga/pec/useragreemt.txt

[ANS thanks Bob, WB4APR for the above information]

SB SAT @ AMSAT $ANS-247.06
North Texas Balloon Project Launch #14

AMSAT News Service Bulletin 247.06
From AMSAT HQ SILVER SPRING, MD.
September 4, 2005
To All RADIO AMATEURS
BID: $ANS-247.06

The North Texas Balloon Project will launch NTBP #14, named "Rapidfire," on Sept. 3, 2005 from the Hillsboro, TX, Airport. This flight is essentially a re-flight of NTBP #12, flown on 20 August 2005, to counter the actions of "Dr. Murphy" enjoyed on NTBP #12. It will have on board a cross band voice repeater, voice reports of inside and outside temperatures plus time (courtesy of the Fannin County ARC, Bonham, TX), APRS package location, and a DF Beacon. Liftoff time will be moved to approximately 8:15 AM CDT. A Special Event Callsign, N5B, will be used for this event. This time there will be a Special Event operation on 14.282 mHz during the event. There will be an HF Launch Information Net on 7260 +/-10 kHz. Other frequencies, and information for NTBP #14, are the same as the information for NTBP #12 posted at www.ntbp.org. Check the Web Page frequently for status and come join the fun!

Frequencies:

Crossband Repeater: Uplink: 445.800 mHz, Downlink: 147.560 mHz
APRS Location Information: 144.390 mHz
Time and Temperature Package: 146.56 mHz
Shuttle Package DF Beacon: 145.56 mHz
Launch Information Net: 7260 +/- 10 kHz
N5B Special Event Check-In: 14.282 mHz

[ANS thanks Keith, W5IU for the above information]

/EX

In addition to regular membership, AMSAT offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT Office.

BID: $ANS-247.S1

VO-52 HAMSAT
Catalog Number: 28650
Launch Date: May 05,2005

Status: On orbit
Current Mode: U/V

Proposed frequencies:

Indian transponder:

Uplink : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacom : 145.940MHz continue carier signal

Dutch transponder:
Uplink : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacon : 145.860MHz 12WPM with CW message
[07242005]
=====
AO-51 ECHO
Catalog number: 28375
Launch date: June 29, 2004

Status: Testing
Curent Mode: PBBS - OFF
      FM REPEATER - V/U

Analog voice downlink: 435.300 MHz FM
          435.150 MHz FM
Analog voice uplink: 145.880 MHZ FM
          145.920 MHz FM 67Hz PL tone
                       1268.700 MHz FM 67Hz PL tone

Digital Downlinks: 435.150 MHz FM, 38k4 Digital, PBP, 1 watt output
                       2401.200 MHz FM 38k4 bps, AX.25
Digital Uplink: 145.860 MHz FM, 9k6 Digital, Pacsat Broadcast
   Protocol (PBP)

Broadcast: PECHO-11
BBS: PECHO-12

Current scheduled operating modes:

Due to the on going Huricane Katrina Relief Efforts in the Gulf Coast
States,
AO-51 will continue in the default mode V/U with 9k6 Digital, V/U, PBP BBS
mode. Updated information will be posted as soon as any changes are made.

[ANS-WSR thanks Bill, VE7WFG for the above information]
[0904005]
=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating
          procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that SO-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz. The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10 minute timer.

[09122004]

=====

FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

John, N4QWL reports on July 16th, 2005:

Last evening I had a AOS to LOS qso with WI2W. FO-29 came up at 01:17z here in FM07 and I found WI2W and we chatted until 01:33z. The satellite was at 2 degrees elevation when I finally heard him start to crackle a bit. What a great QSO! To think that I watched this bird launch back in 1996 and it is still working so well is a real thrill. I believe I still have the video. I might just look for it and watch it again. Boy do I love this satellite stuff! Look for you all up there.

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will automatically analyze all digital telemetry from the satellite (such as current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[ANS-WSR wishes to thanks John, N4QWL for this week's report]

=====
INTERNATIONAL SPACE STATION (ISS) - ARISS
Catalog number: 25544
Launch date: November 20, 1998

Status: Operational
Current Mode: U/V CROSS-BAND REPEATER
Digipeater: Inactive

The current Expedition 11 crew is:
```

Commander Sergei Krikalev
Flight Engineer John Phillips

Worldwide packet uplink: 145.990 MHz FM
Region 1 voice uplink: 145.200 MHz FM
Region 2/3 voice uplink: 144.490 MHz FM
Worldwide downlink: 145.800 MHz FM

Repeater Uplink: 437.800 MHz FM
Repeater Downlink: 145.800 MHz FM
Doppler Shift is 10 KHz

Russian callsigns: RS0ISS, RZ3DZR
USA callsign: NA1SS
Packet station mailbox callsign: RS0ISS-11
Packet station keyboard callsign: RS0ISS-3
Digipeater callsign: ARISS

This off the ARISS webpage:
http://www.rac.ca/ariss/oindex.htm#New%20ARISS%20Operations :
The ARISS program is pleased to announce that the amateur radio equipment aboard the International Space Station is now operating in cross-band repeat mode. We realize that many of you will miss the packet-operating mode. However, cross-band repeat allows further experimentation of the ISS amateur radio system

The downlink for this operating mode remains the same, so listen for the station on 145.80 MHz. The new uplink frequency is 437.80 MHz. All frequencies are subject to Doppler shifting. For further information on working satellites and adjusting for Doppler shift, please review Emily Clark's (W0EEC) excellent presentation on AMSAT's website:
http://www.amsat.org/amsat-new/information/faqs/Intro_sats.pdf

The ISS daily crew schedule can be found at:
http://spaceflight.nasa.gov/station/timelines/
Remember that the crew operates on UTC time. Also, all of the time line is NOT translated from Russian and posted.

More information is available at:

SB SAT @ AMSAT <W8ISS $ANS-247.S2

WSR 247 Part 2 09/04/2005

AMSAT NEWS SERVICE BULLETIN 247.S2 FROM AMSAT HQ
SILVER SPRING, MD, SEPTEMBER 04, 2005
TO ALL RADIO AMATEURS
BID: $ANS-247.S2

PCSAT2 ?0-??
Catalog Number:
Launch Date: August 1, 2005

Status: Operational

PCSAT2 was installed on the exterior of the International Space Station and was activated on August 3, 2005.

PCSAT2 CAPABILITIES: PCSAT2 is attached to the ISS and so its operations must be in cooperation with the ARISS communications suite to minimize any mutual interference and to coordinate activities. Here are the capabilities of the PCSAT2 and ARISS payloads:

PCSAT SYSTEM A:

435.275 PCSAT2 DOWNLINK 1200 baud packet with uplink on 145.825
435.275 PCSAT2 DOWNLINK Occasional user PSK-31 continuous downlink
145.825 PCSAT2 DOWNLINK 1200 baud packet
PCSAT SYSTEM B:

437.975 PCSAT2 DOWNLINK periodic Solar Cell data and PCSAT2 telemetry at 9600 baud
437.975 PCSAT2 DOWNLINK TNC-B command downlink at 1200 baud
437.975 PCSAT2 DOWNLINK User Voice Repeater with VHF uplink
437.975 PCSAT2 DOWNLINK Packet digipeater with VHF uplink

It looks like PCSAT2 can best contribute at this time by operating in PSK-31 mode for the near future. This is a very exciting new transponder mode which solves the congestion problem on FM repeaters by letting multiple stations all communicate at the same time.

PSK-31 users are welcome to try out the new PCSAT2 PSK-31 transponder on ISS with an uplink on 29.402 � 1 KHz and downlink on 435.275 � Doppler using FM.

The FM downlink lets everyone operate full duplex and everyone to see the same view of the passband as everyone else. THus you can see exactly what your signal looks like to everyone else.

Help Wanted:

Here is your chance to become a viable part of the Amateur Satellite Community.

We are looking for a volunteer satellite packet station in Hawaii that is interested in helping with telemetry and sat-gating of PCSAT2 and ARISS packets. Requirements are:

1) General familiarity with packet
2) TNC connected to a cross band radio that
   can RX on UHF and TX on VHF.
3) modest UHF beam and rotator system.

Contact WB4APR for more information.

Packets seen from PCSAT2 can be reviewed at:
http://www.findu.com/cgi-bin/pcsat2.cgi

A screen shot of both the 9600 bps and 1200 bps decoded data as seen by Simon, 9W2QC, can be seen at:
http://www.9w2qc.net/pcsat2/

More information on PCSAT2 can be found at:
http://web.usna.navy.mil/~bruninga/pcsat2.html

[ANS-WSR thanks Bob, WB4APR and the U.S. Naval Academy Satellite Lab for the aboveinformation.]

=====
NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Non-Operational?????

Uplink/downlink: 145.827 MHz 1200 baud AX.25 AFSK via W3ADO-1
Aux/Uplink: 435.250 MHz 9600 baud via PCSAT-2 (off)
APRS Downlink: 144.390 MHz (Region 2)

PCSat is a 1200-baud APRS digipeater designed for use by stations using hand-held or mobile transceivers. Downlinks feed a central web site at:
http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy under the guidance of Bob Bruninga, WB4APR.
[07242005]
=====
CUTE-1
Catalog number: 27844
Launched: June 30,2003

Status: Operational

Uplink: ?
Downlink: 436.8375 CW
              437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ?)
Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as OPERATIONAL?
Indeed it is very operational as a CUBESAT sending CW telemetry on 436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at 14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz. Initial orbital parameters were period 101.4 min, apogee 831 km, perigee 819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

[ANS WSR wishes to thank Cliff, K7RR, for this week's information]

[05092004]
=====
UO-11 OSCAR-11
Catalog number: 14781
Launched: March 1, 1984

Status: Semi-operational?

Telemetry Downlink: 145.826 MHz. FM (1200-baud AFSK).
approx. 10 days ON, 10 days OFF
Mode-S Beacon: 2401.500 MHz. ... OFF
UHFBeacon: 435.025 MHz. ... OFF

OSCAR-11 is back! I received the good news, on Saturday morning, while at the AMSAT-UK Colloquium. This was entirely unexpected! On Sunday morning Bob G4VRC played me a recording of an early morning pass received that day.

During the period 21 July to 14 August 2005 consistent signals have been heard from 30 July to 08 August. Signals seem to be weaker than usual, confirmed by the many reports received. However,since I last heard the satellite on 30 April, I've reinstalled my antennas , which makes comparisons difficult.

Many thanks for all the recent reports of OSCAR-11 including those from KU7Z (who heard it first), KB2M, VK6XH, HK7MKE, KA2UPW, JE9PEL, G1OCN, HB9SKA and G8OQW.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working. One bit in channel 62, DSR mode, has changed from WRITE to READ. DSR is the Digital Store & Readout experiment. This could be significant if the experiment is still drawing current, but the other status bit indicates that it is switched OFF.

The on-board clock is now showing a very large error. It has lost approximately 19 days since 30 April. During the recent data collection period, the clock error has been changing at a decreasing rate. The size of the clock error and the rate at which it is changing is similar to the duration of the solar eclipse periods. This suggests that the clock might have been switching OFF during eclipses.

The eclipses have now ended, and the satellite should be in continuous sunlight for the remainder of this year, and well into next year. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures.

If the watchdog timer is still operating on a 20 day cycle, ie.

approximately ten days ON followed by 10 days OFF, then the VHF beacon should resume transmissions around 18 August.

The Beacon frequencies are -

VHF 145.826 MHz. AFSK FM ASCII Telemetry

UHF 435.025 MHz. OFF

S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is www.users.zetnet.co.uk/clivew/

If you place this bulletin on a terrestrial packet network, please use the bulletin identifier $BID:U2RPT112.CWV, to prevent duplication.

[ANS-WSR thanks Clive, G3CWV, for the above information]

Broadcast callsign: POSAT1-11
BBS callsign: POSAT1-12

PO-28 (POSAT-1), Portugal's first satellite, launched 12 years ago, will be turned over to Amateur Radio use in the very near future. That was the word July 30 from AMSAT-UK Secretary Jim Heck, G3WGM, during the AMSAT-UK International Space Colloquium in Guildford, England.

Launched September 25, 1993, the satellite operated as a packet store-and-forward BBS (9600 baud FM FSK) on Amateur Radio frequencies for several weeks in early 1994. Over the years, PO-28's primary usage has been commercial, although plans have called for eventually shifting its operation to ham radio use. G3WGM reports that following lengthy negotiations it has been agreed that the satellite can be switched permanently to amateur frequencies. The changeover is expected to take a couple of weeks.

The Portuguese satellite was built at the University of Surrey as part of a collaborative satellite technology program that involved industry and academe. Uplink frequencies will be 145.925 and 145.975 MHz. Downlink frequencies will be 435.250 and 435.275 MHz. More information on PO-28 is on the AMSAT Web site http://www.amsat.org/amsat/sats/n7hpr/po28.html.

Uplink Frequencies: 145.925 and 145.975 MHz
Downlink Frequencies: 435.250 and 435.275 MHz

Orbit: 822 x 800 km, 98.6 deg inclined, sun-synchronous.

Transponder capabilities include FM repeater and 38k4 data. If you want to hear how loud this satellite is, listen on 429.950 until the change back to amateur radio service.

Keplerian elements for PO-28 are not currently contained in the AMSAT keps bulletins, but can be found at Celestrak in amateur.txt using the name "POSAT". Users of Space Track should query the NORAD Satellite ID number 22829. The name listed by Space Track is "EYESAT A".

More information of POSAT-1 can be found at:
http://www.ee.surrey.ac.uk/SSC/CSER/UOSAT/missions/posat1.html
http://www.amsat.org/amsat/sats/n7hpr/po28.html
[ANS-WSR wishes to thanks Trevor, M5AKA and Jim, G3WGM, for this week's information.]

=====
AO-10 OSCAR 10
Catalog number: 14129
Launched: June 16, 1983

Status: Non-operational

Uplink: 435.030 to 435.180 MHz CW/LSB
Downlink: 145.975 to 145.825 MHz CW/USB

```
Beacon:   145.810 MHz (unmodulated carrier)

AO-10 has been locked into a Mode-B, 70-cm uplink and
2-meter downlink for several years.

W4SM has more information about the satellite at the following URL:
http://www.cstone.net/~w4sm/AO-10.html

=====
IO-26 ITAMSAT
Catalog number: 22826
Launch Date: September 26, 1993

Status: Non-operational

Uplink:             145.875 145.900 145.925 145.950 MHz FM (1200-baud)
Downlink:           435.812 MHz SSB
Broadcast Callsign: ITMSAT-11
BBS:                ITMSAT-12

Alberto E. Zagni - I2KBD reports on 02/13/05
The spacecraft is in MBL (safe mode) and is trasmitting just 6 channels
of telemetry. Temperatures and voltage are nominal, but there seems to
be a problem with the onboard receiver, refusing to accept commands.
The spacecraft was launched in 1993, thus nearing 12 years in orbit...

Best regards
Alberto E. Zagni - I2KBD
ITAMSAT Mission Director

PO-34 PANSAT
Catalog number: 25520
Launched: October 30, 1998

Status: Telemetry downloads only

Uplink/downlink frequency (listed on the PanSat web site) 436.500 MHz

The satellite is not available for general uplink transmissions.

The Naval Postgraduate School developed PanSat. At the time of
launch, PanSat spread-spectrum digital transponders were to
be available to Amateur Radio operators along with software to utilize
this technology.

The satellite is still operating, however, the spread spectrum packet
radio portion never took place. The spacecraft is now beyond it's
initial 2-year mission life, but telemetry records are still being
downloaded.

For more information, visit the official PanSat web site at:
http://www.sp.nps.navy.mil/pansat/
[05092004]
=====

AO-49 AATiS OSCAR-49 (SAFIR-M)

Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio anand telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears

AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at: http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

=====
PHASE 3E ?O-??
Catalog Number:
Proposed Launch Date: Early 2006

Status: Under Construction

William Leijenaar, PE1RAH reports on July 16th, 2005:

Hi AMSATs,

I always like to inform the AMSATs public about my P3e work, but unfortunatly due to
some reasons there was not much time and nothing much to say...

However, now I am happy to announce that the my MODE-UV transponder design for P3e is ready at the P3e integration place in Marburg (Germany). About 4 weeks ago I was in Marburg before, where the transponder has been checked. Unfortunatly some unsure things were found in the design. The unsure things were about long term stability after many years in space.

At home in The Netherlands, I changed the design with some minor changes to have a secure long term stability. Finally I tested the transponder again and it performed well within the specifications. Again something learned for future transponder designs :o)

Last Wednesday I drove to AMSAT-DL P3e integrations place in Marburg again, and have my transponder again checked. In the beginning it seemed that the 70cm receiver lost 10dB in sensetivity. After some more measurements we find out that it was due to a bad attenuator we used for protection at the input.

Together with Karl Meinzer we looked for any problems, but so far we could see (without HELAPS) all was okay. In the afternoon I went back home again, this time without the MODE-UV.

Now the MODE-UV will get a new home, the home of P3e... :o)
I hope the transponder will work like its elder sister in AO-10, and you all will enjoy it for many years...

It was lots of work to get it this far, but I know it is for a good purpose...

For the latest project status update please visit the AMSAT-DL P3-E web page:
http://www.amsat-dl.org/p3e/

[ANS-WSR wishes to thank William Leijenaar, PE1RAH for this week's report]

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
        888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)

* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satelite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

AMSAT NEWS SERVICE
ANS-254

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:
ans-editor@amsat.org

In this edition:

* 2005 AMSAT Symposium is Cancelled
* AMSAT-NA Reschedules Key Meetings
* 2006 AMSAT Symposium Plans Announced
* ESA Award for SSETI Express telemetry download competition
* SSETI Express Mission Pages Updated
* ARISS Status for Week of September 5, 2005
* Heads Up - Alderney DXpedition May Include Satellite Activity
* Software Updates Available for Satellite Programs
* AMSAT Awards

SB SAT @ AMSAT $ANS-254.01
2005 AMSAT Symposium is Cancelled

AMSAT News Service Bulletin 254.01

From AMSAT HQ SILVER SPRING, MD.
September 11, 2005
To All RADIO AMATEURS
BID: $ANS-254.01

The AMSAT-NA Board of Directors in special session held September 6 via teleconference has made the decision to cancel the 2005 AMSAT Symposium which was scheduled to take place in Lafayette, LA October 7-9.

While Hurricane Katrina spared Lafayette in terms of physical damage, the city is now the home to thousands of evacuees who left the Gulf Coast and are now housed in Lafayette's hotels and other accommodations for the near future.

Over the past week AMSAT-NA has been looking into the possibility of relocating the Symposium to an alternative site. A number of options were explored (such as Baltimore-Washington, Pittsburgh, Cleveland, Cincinnati, Orlando, Tampa, San Francisco, and Tulsa) as several AMSAT teams investigated if the Symposium could be relocated on short notice. This required finding appropriate hotel facilities and putting local host committees together to coordinate Symposium at each potential location. It became obvious that with less than five weeks before the Symposium was scheduled to take place, there would be insufficient time to make a successful change in location. Altering the Symposium dates was not viewed as practical since many attendees have to schedule their vacation time well in advance and most individuals already have commitments for later weekends.

"We regret that Symposium will not be held this year," says AMSAT-NA President Rick Hambly, W2GPS. "Our thoughts and prayers go out to the victims on the Gulf Coast who are now relocated to Lafayette and surrounding states." Rick went on to note that the Board was concerned that attempting to relocate on such short notice would impact the quality of the Symposium. "The task of hosting a Symposium would potentially strain the host committee tasked with handling the Symposium with less than 30 days notice."

"Many thanks to our AMSAT members who stepped forward to identify potential locations. Clearly, these volunteers have worked very hard to find an alternative site and would have done their best to host a Symposium. Unfortunately, time is working against us" notes Barry Baines, WD4ASW AMSAT's VP-Marketing & User Services.

The Board also wishes to thank Nick Pugh, K5QXJ for the extensive work that he has done to plan for the Lafayette Symposium and to his team for organizing what would have been an excellent Symposium in Louisiana.

The Board also noted that donations are needed to assist the relief efforts on the Gulf Coast. Given that this year's Symposium is cancelled, the Board hopes that individuals will decide to donate a portion of their funds to be used to cover their cost of attending the Symposium to an organization (such as American Red Cross) aiding the relief effort on the Gulf Coast.

AMSAT-NA Office Manager Martha Saragovitz will handle the process of providing refunds for registration fees already collected. Checks will be sent to those whose fees had previously been processed. In some cases, registrants had completed the registration process on the AMSAT web site by their credit cards. These charges will be destroyed. Checks covering registration that have been sent by mail and not processed will be returned to the sender.

Attendees holding reservations at the Holiday Inn should cancel their reservations prior to the scheduled arrival date in order to avoid first night room charges. The Holiday Inn in Lafayette has been experiencing telephone problems, so it may be best to contact the Holiday Inn Reservation Center (888-HOLIDAY) or use the Holiday Inn website:
http://www.holiday-inn.com
if the individual has their confirmation number for their reservation.

[ANS thanks Barry Baines, WD4ASW, and the AMSAT Board of Directors for the above information]

SB SAT @ AMSAT $ANS-254.02
AMSAT-NA Reschedules Key Meetings

AMSAT News Service Bulletin 254.02
From AMSAT HQ SILVER SPRING, MD.
September 11, 2005
To All RADIO AMATEURS
BID: $ANS-254.02

With the cancellation of the 2005 AMSAT Symposium in Lafayette, LA due to Hurricane Katrina, the AMSAT Board of Directors Meeting will now be held on Thursday and Friday, October 6 & 7 at the Wyndham Pittsburgh Airport Hotel.

Following the BOD Meeting which is expected to end by noon on Friday, the Eagle Team will have their meeting starting around 1400 on the 7th and conclude late Saturday. However, if discussions are continuing, provisions have been made to allow the Eagle Team to continue meeting on Sunday morning, October 9.

In addition, in order to comply with AMSAT Bylaws that require that an AMSAT Annual Meeting be held in October or November of each year, this meeting will take place on Friday evening as well, though the specific time has not yet been finalized. AMSAT is also investigating the feasibility of using various teleconference methods to allow AMSAT members to participate who are not on site.

With the exception of when the Board of Directors is in Executive Session, all three meetings are open to those who wish to attend. Information on the Wyndham Hotel where these meetings are taking place may be found at:
http://www.wyndhampittsburghairport.com

The IARU meeting that was scheduled for Sunday morning, October 9 in Lafayette, LA has not been rescheduled.

[ANS thanks Barry Baines, WD4ASW, and the AMSAT Board of Directors for the above information]

SB SAT @ AMSAT $ANS-254.03
2006 AMSAT Symposium Plans Announced

AMSAT News Service Bulletin 254.03
From AMSAT HQ SILVER SPRING, MD.
September 11, 2005
To All RADIO AMATEURS
BID: $ANS-254.03

Recognizing that most of the 2005 Symposium attendees had already purchased non-refundable airline tickets to fly to Lafayette, Baton Rouge, or New Orleans, the Board also made a decision on the location for the 2006 AMSAT Symposium. 'Non-refundable' means the airline will not return the airfare to the individual due to cancellation but the value of the reservation may be applied to a future flight as long as cancellation occurs prior to the original flight. Other restrictions on making changes to non-refundable reservations may also apply. Some airlines have waived 'change fees' for altering a reservation associated with current reservations into New Orleans, Baton Rouge, and Lafayette.

The AMSAT Board of Directors voted September 6 nigh to accept an offer from Project OSCAR to host the 2006 Symposium in the San Francisco Bay area in the month of October. Emily Clarke, W0EEC will serve as host chairperson and will coordinate the Symposium.

"San Francisco is a great place to hold the Symposium," says Emily. "The roots of the Amateur Satellite Service can be found here as Project OSCAR began building the first amateur satellites in the Bay Area." Emily also notes the allure of the area for both 'geeks' and families alike. "We have everything from beaches to mountains, cities and wine country - so come to the Symposium and plan your vacation, too!"

In addition to the AMSAT Symposium, San Francisco is planned as a joint meeting with the ARISS International Delegates. "We're looking forward towards another successful joint meeting with AMSAT" says ARISS International Chairman and AMSAT VP-Human Space Flight Frank Bauer, KA3HDO.

Details about exact dates and hotel for the 2006 Symposium will be announced via ANS and posted on the AMSAT website later this month as they become available. Individuals holding airline reservations into Lafayette should hold off making changes until the dates and exact location of the 2006 Symposium are announced. In the meantime, AMSAT-NA looks forward towards an outstanding Symposium in October 2006 in the Bay Area.

[ANS thanks Barry Baines, WD4ASW, and the AMSAT Board of Directors for the above information]

SB SAT @ AMSAT $ANS-254.04
ESA Award for SSETI Express telemetry download competition

AMSAT News Service Bulletin 254.04
From AMSAT HQ SILVER SPRING, MD.
September 11, 2005
To All RADIO AMATEURS
BID: $ANS-254.04

The Education Department of ESA, the European Space Agency, is delighted to announce details of the award that will be offered to the amateur radio community in relation to the downloading of telemetry from their SSETI Express student built satellite. The award will be given to the amateur who submits the largest number of valid telemetry and payload packets regardless of which band it is received on.

SSETI Express is scheduled for launch on September 27th from Plesetsk in northern Russia at approx 06:52 UTC. It will downlink telemetry and payload data in AX25 format at 9k6 on 437.250MHz and at 38k4 on 2401.835 MHz. It will later also be available for radio amateurs to use as a single channel FM transponder.

All radio amateurs around the world are encouraged to download the necessary software from the www.sseti.org/express website (this will be available starting approximately September 12) and to use the SERACC system to forward the telemetry and payload data to SSETI Express Mission Control. Submissions will be automatically recorded and the leaderboard will be shown on the website.

The winner will be offered the opportunity to visit the STEC06 Conference and Exhibition in Germany in Spring 2006. STEC, the Student Technology Education Conference, follows previous events in 2004 in Lausanne in Switzerland and in 2005 in Aalborg in Denmark.

The three day event is similar to the AMSAT-NA Symposium and the AMSAT-UK Colloquium but with more breakout technical sessions in addition to the Keynote Speeches. The meetings are always interesting and thought provoking and great enthusiasm and passion is shown by all the attendees. The post meeting attitude adjustment sessions have also proven to be exciting.

The winner will also be encouraged to present a paper on how he/she achieved their success - but this is not mandatory!

In addition to attending the STEC 06 Conference, the winner will be invited to visit ESA's Mission Operations Centre - ESOC - near Darmstadt in Germany where they will be given a private escorted tour of the facilities. ESOC currently controls the many exciting orbital and deep space ESA missions and will be responsible for the European Columbus module when it joins the International Space Station

For more information on the STEC events - check http://www.stec2005.space.aau.dk/ to see what this year's event included and for a few details of the ESOC facility, visit http://www.esa.int/SPECIALS/ESOC/

The winner will be the amateur at the top of the leaderboard at 00:00 on January 1, 2006. The prize will include economy class travel from your home location, accommodation and a "small" daily subsistence allowance.

AMSAT-UK wishes to congratulate and thank ESA for their generous prize, a first in the field, and is confident that it will add to the great enthusiasm for the SSETI Express project which already exists within the amateur radio community. It will be a great opportunity for us to demonstrate that the amateur radio groundstation "network" is a valuable resource for satellite projects which are able include useful amateur payloads.

[ANS thanks Graham, G3VZV for the above information]

ARISS Status for Week of September 5, 2005

AMSAT News Service Bulletin 254.06
From AMSAT HQ SILVER SPRING, MD.
September 11, 2005
To All RADIO AMATEURS
BID: $ANS-254.06

1. World Expo 2005 Contact Successful

The Japan Amateur Radio League (JARL) set up a radio station at the 2005 World Expo in Aichi, Japan. On Friday, September 2, twenty-one students, ranging in ages from 6 - 15, came from Aichi and the surrounding county to take part in this ARISS contact. John Phillips, KE5DRY, answered all twenty-one questions posed to him by the students, as approximately 150 people looked on. Eight newspapers and one television station provided media coverage of the event. Photos, video and audio of the contact may be found on the following website:
<http://jk1zrw.dyndns.org/expo2005.html.en>

2. Upcoming School Contacts

The Matthew J. Kuss Middle School in Fall River, Massachusetts, has been scheduled for a contact on Friday, September 16 at 1824 UTC. Kuss is a 2003 NASA Explorer School and has established its own radio club.

3. ARISS Videos Posted on AMSAT Website

ARISS participated in the Dayton Hamvention 2005 held over the May 20 - 22 weekend. ARISS Chairman Frank Bauer and ARISS Deputy Program Manager Mark Steiner attended, giving a presentation entitled, "Human Spaceflight Update: ARISS, the Moon and Mars," at the AMSAT Forum. Videos of the ARISS presentation and of the Hamvention activities are available on the AMSAT website.

AMSAT and ARISS members also participated in Space Day at the Udvar Hazy Center on May 5, 2005. A video clip which includes coverage of the exhibition booth and an interview with Frank Bauer is also available for viewing.

For all videos, see:
<http://www.amsat.org/amsat-new/information/videoNews.php>

4. Progress 19P to Include SuitSat and SSTV

The SuitSat hardware and the SSTV system will be launched on Progress 19P, which was scheduled to fly on September 8. The Russian EVA to deploy SuitSat is expected to take place in early December.

5. Cosmonaut Receives Birthday Wishes

Sergei Krikalev, U5MIR, made several general contacts during the last weekend of August. Stations from several countries spoke with the cosmonaut, wishing him a happy birthday. The contacts were made by operators in Kuwait, Malaysia, Columbia, Thailand, Argentina, U.S., Brazil, Australia, Puerto Rico, and Chile. Krikalev turned 47 on Saturday, August 27. To listen to a sample of the contacts, go to: <http://pd0rkc.mine.nu/>

6. Astronaut Training Status

Astronaut Sandy Magnus is preparing to take her amateur radio exam in the near future. Astronaut Nicole Stott is scheduled for a ham radio training session at JSC on Tuesday, September 6.

[ANS thanks Carol Jackson, KB3LKI for the above information.

SB SAT @ AMSAT $ANS-254.07
Heads Up - Alderney DXpedition May Include Satellite Activity

AMSAT News Service Bulletin 254.07
From AMSAT HQ SILVER SPRING, MD.
September 11, 2005
To All RADIO AMATEURS
BID: $ANS-254.07

The Alderney DX Team announced plans for a DXpedition to be on the air Wednesday, October 12 to Wednesday, October 19, 2005. This is a group of four amateur radio operators from around the U.K. who will be operational on all HF bands, 6 meters, VHF APRS, VHF/UHF SSB and hopefully, some satellite activity, from the Island of Alderney, the most northerly island of the Channel Islands group.

The first calls are planned to be made during the evening of October 12 most probably on 40 and 80 meters.

Additionally, Worked All Britain and Lighthouse activity may take place, depending on the availability of portable power supplies or a generator.

Further information available from: dave at g1ocn dot com

Skeds are welcomed and encouraged.

QSL route(s) are:

GU5XW via G5XW
GU1OCN via G5XW
MW0JZE via G5XW
MU3SDE via M3SDE

Further information available under individual call signs on
QRZ.COM. A further updates will be sent prior to departure.

[ANS thanks the Alderney DX Team for the above information]

SB SAT @ AMSAT $ANS-254.08
Software Updates Available for Satellite Programs

AMSAT News Service Bulletin 254.08
From AMSAT HQ SILVER SPRING, MD.
September 11, 2005
To All RADIO AMATEURS
BID: $ANS-254.08

* Simon Brown, HB9DRV, announced FT-847 support has been added into the Ham Radio Deluxe software and is working well. Still to be added are further updates for proper same-band Doppler support. See:
http://www.ham-radio.ch/forums/viewtopic.php?p=15785#15785

* Stefano Bravi, an SWL in Italy, announced a new version (1.2) of his PCSAT2 Telemetry Decoder program is available for download. See:
http://fc.retecivica.milano.it/~stefano.bravi/pcsat2dec_12.zip

* Erich Eichmann DK1TB has released version 12.4 of the popular satellite tracking program SatPC32. The program has two significant new features. First is automatic internet download of Keplerian elements such as the amateur.txt file from celestrak.com. Second is an improved user interface for initial configuration of user location, radio and rotor interfaces, etc. The program may be downloaded from the author's personal web site:
http://www.dk1tb.de/indexeng.htm

Click the "downloads" button on the left frame, then choose the appropriate "SatPC32 Demo" version (9.7 MB download). The demo version is fully functional except that the user must enter their lat/lon every time when launching the program. If you already have a SatPC32 registration code you may use that code to make the 12.4 version fully functional. If you have never purchased SatPC32 you may purchase a registration code from the AMSAT online store:
http://www.amsat-na.com/item.php?id=100020

DK1TB has generously donated SatPC32 to AMSAT-NA, AMSAT-UK, and AMSAT-DL. If you use SatPC32, please purchase a registration code from one of these groups. All of the purchase price will go to support amateur satellite programs.

[ANS thanks Simon, HB9DRV, Stefano, Wayne, W9AE, and Erich, DK1TB for the above information]

Carl,

I had a lengthy discussion with Dick Norton at the SW Div. convention this weekend. Seems he's a lot more saavy than I thought he was.

Well, you were right that there was a lot of back-room crap going on last week. Apparently, the Board took a vote (probably via telephone or e-mail) on whether or not to review your disqualification. According to Dick, there were only 4 votes supporting your request for a full Board review. Dick was one of them!! He told me that he told the Board that he could not see any upside at all to keeping you off the ballot; only downside. We discussed some of those things, and he pretty much agreed with my assessment that it would discourage future competition for office, discourage new blood, and perpetuate the image that the Board is a bunch of "good ol' boys" exclusive club that won't allow for any outsiders with dissenting opinions on much of anything. He also agreed that it sure looked like "paybacks" over the no-code issue. He also brought up the point that even given the Board members' worst case fears, that you would be a loud, divisive member of the Board, that you're only one vote, and could cause virtually no damage at all without support of other Board members. (He did not say he BELIEVED that the worst case would happen; only that it wouldn't cause any damage) Of course he mentioned that you would have to get elected first, in a three way race no less.

In summary, he was a progressive vote that was completely outvoted by a majority of Board members. As a result, I have a much better opinion of Dick now than when he was first elected. But now, you have a tough decision to make. Might I suggest the method of your LDS youth? (prayer)

Good luck with your decision.

Rick T.

Hi, i'd like to invite those interested in Iridium to join our discussion-group where we currently look at the possibilties of receiving and decoding Iridium signals.

As you may have noticed the Iridium satphone system has currently gained a lot of attention thanks to it's use in Iraq and in the Katrina area.

Here's a few technical details:

Handset TX-power is an average 0,6 Watts
RX sensitivity is -118 dBM
Frequency-band 1616-1626,5 MHz (L-Band)
Duplex is Time Division Duplex TDD (RX/TX same freq)
Data-rate 2400 Bd (V42b compression)
Modulation is QPSK
Acess/Multiplex is TDMA/FDMA
Coverage: 100% Worldwide (sat in sight)
Calls currently barred to: N.Korea,N.SriLanka
Use forbidden in: Cuba,Iran,Libya,Sudan,Angola
Services: Voice,Data,Paging,Voice PTT,Group calls
Mobile < > Sat link=encryption NO (?)
Sat < > Groundstation link-encryption YES (?)
Sat < > Sat link-encryption: UNKNOWM (probably NO)
Standard end-to-end encryption: NO
Add-on encryption units available: YES

To take part in this discussion sign up at:

http://groups.yahoo.com/group/gsm-scanner

membership is free,the group is moderated.

this group is mainly talking about GSM and Cellphone interception,encryption and security but we will now extend our interests to satphones.

Greetings

contranl (moderator Yahoo group GSM-scanners)

WSR 254 Part 1 09/11/2005

AMSAT NEWS SERVICE BULLETIN 254.S1 FROM AMSAT HQ
SILVER SPRING, MD, SEPTEMBER 11, 2005
TO ALL RADIO AMATEURS
BID: $ANS-254.S1

VO-52 HAMSAT
Catalog Number: 28650
Launch Date: May 05,2005

```
Status: On orbit
Current Mode: U/V

Proposed frequencies:
-------------------
Indian transponder:
Uplink  : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacom  : 145.940MHz continue carier signal

Dutch transponder:
Uplink  : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacon  : 145.860MHz 12WPM with CW message
[07242005]
=====
AO-51 ECHO
Catalog number: 28375
Launch date: June 29, 2004

Status: Testing
Curent Mode: PBBS - ON
      FM REPEATER - V/U

Analog voice downlink:  435.300 MHz FM
          435.150 MHz FM
Analog voice uplink: 145.880 MHZ FM
          145.920 MHz FM 67Hz PL tone
                       1268.700 MHz FM 67Hz PL tone

Digital Downlinks:      435.150 MHz FM, 38k4 Digital, PBP, 1 watt output
                       2401.200 MHz FM  38k4 bps, AX.25
Digital Uplink:         145.860 MHz FM, 9k6 Digital, Pacsat Broadcast
   Protocol (PBP)

Broadcast: PECHO-11
BBS:  PECHO-12

Current scheduled operating modes:

Due to the on going Huricane Katrina Relief Efforts in the Gulf Coast
States,
AO-51 will continue in the default mode V/U with 9k6 Digital, V/U, PBP BBS
mode. Updated information will be posted as soon as any changes are made.

[ANS-WSR thanks Bill, VE7WFG for the above information]
[09112005]
=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002
```

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that SO-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz. The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10 minute timer.

[09122004]
=====
FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

John, N4QWL reports on July 16th, 2005:

Last evening I had a AOS to LOS qso with WI2W. FO-29 came up at 01:17z here in FM07 and I found WI2W and we chatted until 01:33z. The satellite was at 2 degrees elevation when I finally heard him start to crackle a bit. What a great QSO! To think that I watched this bird launch back in 1996 and it is still working so well is a real thrill. I believe I still have the video. I might just look for it and watch it again. Boy do I love this satellite stuff! Look for you all up there.

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will automatically analyze all digital telemetry from the satellite (such as

current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[ANS-WSR wishes to thanks John, N4QWL for this week's report]

=====

AO-7 AMSAT OSCAR 7

Catalog number: 07530
Launch Date: November 15, 1974

Status: Semi-operational in sunlight.
Return to active status: June 21,2002

Uplink: 145.850 to 145.950 MHz CW/USB Mode A
            432.125 to 432.175 MHz CW/LSB Mode B
Downlink: 29.400 to 29.500 MHz CW/USB Mode A
            145.975 to 145.925 MHz CW/USB Mode B
Beacon: 29.502 MHz, 145.972 MHz, 435.1 MHz, 2304.1 MHz

Emily, W0EEC has created a website to allow the users of AO-7 to record contacts, observations and use of the satellite more effectively at:
http://www.emilyshouse.com/experthams/ao7/main.php
This includes the ability to log contacts.

Tim, K3TZ has written a program to decode AO-07 telemetry.
The program can be downloaded at:
http://www.qsl.net/k3tz/files/K3TZ_AO-07_Telemetry_Decoder_0.5.zip

For more AO-7 info:

INTERNATIONAL SPACE STATION (ISS) - ARISS

Catalog number: 25544

Launch date: November 20, 1998

Status: Operational
Current Mode: U/V CROSS-BAND REPEATER
Digipeater: Inactive

The current Expedition 11 crew is:
Commander Sergei Krikalev
Flight Engineer John Phillips

Worldwide packet uplink: 145.990 MHz FM
Region 1 voice uplink: 145.200 MHz FM
Region 2/3 voice uplink: 144.490 MHz FM
Worldwide downlink: 145.800 MHz FM

Repeater Uplink: 437.800 MHz FM
Repeater Downlink: 145.800 MHz FM
Doppler Shift is 10 KHz

Russian callsigns: RS0ISS, RZ3DZR
USA callsign: NA1SS
Packet station mailbox callsign: RS0ISS-11
Packet station keyboard callsign: RS0ISS-3
Digipeater callsign: ARISS

This off the ARISS webpage:
http://www.rac.ca/ariss/oindex.htm#New%20ARISS%20Operations :
The ARISS program is pleased to announce that the amateur radio equipment aboard the International Space Station is now operating in cross-band repeat mode. We realize that many of you will miss the packet-operating mode. However, cross-band repeat allows further experimentation of the ISS amateur radio system

The downlink for this operating mode remains the same, so listen for the station on 145.80 MHz. The new uplink frequency is 437.80 MHz. All frequencies are subject to Doppler shifting. For further information on working satellites and adjusting for Doppler shift, please review Emily Clark's (W0EEC) excellent presentation on AMSAT's website:
http://www.amsat.org/amsat-new/information/faqs/Intro_sats.pdf

The ISS daily crew schedule can be found at:
http://spaceflight.nasa.gov/station/timelines/
Remember that the crew operates on UTC time. Also, all of the time line is NOT translated from Russian and posted.

SB SAT @ AMSAT <W8ISS $ANS-254.S2
WSR 254 Part 2 09/11/2005

AMSAT NEWS SERVICE BULLETIN 254.S2 FROM AMSAT HQ
SILVER SPRING, MD, SEPTEMBER 11, 2005
TO ALL RADIO AMATEURS
BID: $ANS-254.S2

PCSAT2 ?0-??
Catalog Number:
Launch Date: August 1, 2005

Status: Operational

PCSAT2 was installed on the exterior of the International Space Station and was activated on August 3, 2005.

PCSAT2 CAPABILITIES: PCSAT2 is attached to the ISS and so its operations must be in cooperation with the ARISS communications suite to minimize any mutual interference and to coordinate activities. Here are the capabilities of the PCSAT2 and ARISS payloads:

PCSAT SYSTEM A:

435.275 PCSAT2 DOWNLINK 1200 baud packet with uplink on 145.825
435.275 PCSAT2 DOWNLINK Occasional user PSK-31 continuous downlink
145.825 PCSAT2 DOWNLINK 1200 baud packet
PCSAT SYSTEM B:

437.975 PCSAT2 DOWNLINK periodic Solar Cell data and PCSAT2 telemetry at 9600 baud
437.975 PCSAT2 DOWNLINK TNC-B command downlink at 1200 baud
437.975 PCSAT2 DOWNLINK User Voice Repeater with VHF uplink
437.975 PCSAT2 DOWNLINK Packet digipeater with VHF uplink

It looks like PCSAT2 can best contribute at this time by operating in PSK-31 mode for the near future. This is a very exciting new transponder mode which solves the congestion problem on FM repeaters by letting multiple stations all communicate at the same time.

PSK-31 users are welcome to try out the new PCSAT2 PSK-31 transponder on ISS with an uplink on 29.402 � 1 KHz and downlink on 435.275 � Doppler using FM.

The FM downlink lets everyone operate full duplex and everyone to see the same view of the passband as everyone else. THus you can see exactly what your signal looks like to everyone else.

Help Wanted:

Here is your chance to become a viable part of the Amateur
Satellite Community.

We are looking for a volunteer satellite packet
station in Hawaii that is interested in helping with
telemetry and sat-gating of PCSAT2 and
ARISS packets. Requirements are:

1) General familiarity with packet
2) TNC connected to a cross band radio that
   can RX on UHF and TX on VHF.
3) modest UHF beam and rotator system.

Contact WB4APR for more information.

Packets seen from PCSAT2 can be reviewed at:
http://www.findu.com/cgi-bin/pcsat2.cgi

A screen shot of both the 9600 bps and 1200 bps decoded data
as seen by Simon, 9W2QC, can be seen at:
http://www.9w2qc.net/pcsat2/

More information on PCSAT2 can be found at:
http://web.usna.navy.mil/~bruninga/pcsat2.html

[ANS-WSR thanks Bob, WB4APR and the U.S. Naval Academy Satellite Lab for
the aboveinformation.]

=====
AO-51 ECHO
Catalog number: 28375
Launch date: June 29, 2004

Status: Testing
Curent Mode: PBBS - ON
      FM REPEATER - V/U HIGH POWER

Analog voice downlink: 435.300 MHz FM
         435.150 MHz FM
Analog voice uplink: 145.880 MHz FM
         145.920 MHz FM 67Hz PL tone
                       1268.700 MHz FM 67Hz PL tone

Digital Downlinks: 435.150 MHz FM, 38k4 Digital, PBP, 1 watt output
                       2401.200 MHz FM 38k4 bps, AX.25
Digital Uplink: 145.860 MHz FM, 9k6 Digital, Pacsat Broadcast
   Protocol (PBP)

Broadcast: PECHO-11

BBS: PECHO-12

Current scheduled operating modes:

Due to the on going Huricane Katrina Relief Efforts in the Gulf Coast States,
AO-51 will continue in the default mode V/U with 9k6 Digital, V/U, PBP BBS mode. Updated information will be posted as soon as any changes are made.

[ANS-WSR thanks Bill, VE7WFG for the above information]

=====
NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Non-Operational?????

```
Uplink/downlink:   145.827 MHz 1200 baud AX.25 AFSK via W3ADO-1
Aux/Uplink:        435.250 MHz 9600 baud via PCSAT-2 (off)
APRS Downlink:     144.390 MHz (Region 2)
```

PCSat is a 1200-baud APRS digipeater designed for use by stations using hand-held or mobile transceivers. Downlinks feed a central web site at:
http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy under the guidance of Bob Bruninga, WB4APR.
[07242005]
=====
CUTE-1
Catalog number: 27844
Launched: June 30,2003

Status: Operational

```
Uplink:          ?
Downlink:     436.8375 CW
              437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ? )
```

Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as OPERATIONAL?
Indeed it is very operational as a CUBESAT sending CW telemetry on 436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:

```
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6
```

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram

nanosatellite that was launched by a Rokot rocket from Plesetsk at
14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz.
Initial orbital parameters were period 101.4 min, apogee 831 km, perigee
819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

[ANS WSR wishes to thank Cliff, K7RR, for this week's information]

=====
GO-32 TECHSAT-1B
Catalog number: 25397
Launch Date: July 10, 1998

Status: Operational

Downlink: 435.225 MHz FM (9600-baud FSK)
(435.325 n/a - temperature problems)
Uplinks: 145.850, 145.890, 145.930 FM
1269.700, 1269.800, 1269.900 FM
Broadcast Callsign: 4XTECH-11
BBS Callsign: 4XTECH-12

More information of GO-32 can be found at:
http://www.iarc.org/techsat/techsat.html
[03132005]
=====
MO-46 TIUNGSAT-1
Catalog number: 26548
Launched: September 26, 2000

Status: Operational

Uplink: 145.850 or 145.925 MHz 9600-baud FSK
Downlink: 437.325 MHz
Broadcast callsign: MYSAT3-11
BBS: MYSAT3-12

TiungSat-1 is Malaysia's first micro-satellite and in addition to
commercial land and weather imaging payloads offers FM and FSK
Amateur Radio communication.

TiungSat-1, named after the mynah bird of Malaysia, was developed as
a collaborative effort between the Malaysian government and Surrey
Satellite Technology Ltd.
[05152005]
=====
AO-16 PACSAT
Catalog number: 20439
Launch Date: January 22, 1990

Status: Semi-operational, the digipeater command is on and open for

APRS users.

Uplink: 145.90 145.92 145.94 145.96 MHz FM
(using 1200-baud Manchester FSK)
Downlink: 437.026 MHz SSB (1200-baud PSK)
Mode-S Beacon: 2401.1428 MHz
Broadcast Callsign: PACSAT-11
BBS: PACSAT-12

http://www.telecable.es/personales/ea1bcu
[05092004]
=====
UO-11 OSCAR-11
Catalog number: 14781
Launched: March 1, 1984

Status: Semi-operational?

Telemetry Downlink: 145.826 MHz. FM (1200-baud AFSK).
approx. 10 days ON, 10 days OFF
Mode-S Beacon: 2401.500 MHz. ... OFF
UHFBeacon: 435.025 MHz. ... OFF

OSCAR-11 is back! I received the good news, on Saturday morning, while at the AMSAT-UK Colloquium. This was entirely unexpected! On Sunday morning Bob G4VRC played me a recording of an early morning pass received that day.

During the period 21 July to 14 August 2005 consistent signals have been heard from 30 July to 08 August. Signals seem to be weaker than usual, confirmed by the many reports received. However,since I last heard the satellite on 30 April, I've reinstalled my antennas , which makes comparisons difficult.

Many thanks for all the recent reports of OSCAR-11 including those from KU7Z (who heard it first), KB2M, VK6XH, HK7MKE, KA2UPW, JE9PEL, G1OCN, HB9SKA and G8OQW.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working. One bit in channel 62, DSR mode, has changed from WRITE to READ. DSR is the Digital Store & Readout experiment. This could be significant if the experiment is still drawing current, but the other status bit indicates that it is switched OFF.

The on-board clock is now showing a very large error. It has lost approximately 19 days since 30 April. During the recent data collection period, the clock error has been changing at a decreasing rate. The size of the clock error and the rate at which it is changing is similar to the duration of the solar eclipse periods. This suggests that the clock might have been switching OFF during eclipses.

The eclipses have now ended, and the satellite should be in continuous sunlight for the remainder of this year, and well into next year. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures.

If the watchdog timer is still operating on a 20 day cycle, ie. approximately ten days ON followed by 10 days OFF, then the VHF beacon should resume transmissions around 18 August.

The Beacon frequencies are -

VHF 145.826 MHz. AFSK FM ASCII Telemetry

UHF 435.025 MHz. OFF

S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is www.users.zetnet.co.uk/clivew/

If you place this bulletin on a terrestrial packet network, please use the bulletin identifier $BID:U2RPT112.CWV, to prevent duplication.

[ANS-WSR thanks Clive, G3CWV, for the above information]

SB SAT @ AMSAT <W8ISS $ANS-254.S3
WSR 254 Part 3 09/11/2005

AMSAT NEWS SERVICE BULLETIN 254.S3 FROM AMSAT HQ
SILVER SPRING, MD, SEPTEMBER 11, 2005
TO ALL RADIO AMATEURS
BID: $ANS-254.S3

THE FOLLOWING ARE IN ORBIT BUT ARE
NON-OPERATIONAL AT THIS TIME:

POSAT-1 PO-28
Catalog Number: 22829
Launched : September 25, 1993

Status: Operational - Not open for Amatuer use

Downlink: 435.250 MHz
          435.275 MHz

Uplink: 145.925 MHz
          145.975 MHz

Broadcast callsign: POSAT1-11
BBS callsign: POSAT1-12

PO-28 (POSAT-1), Portugal's first satellite, launched 12 years ago, will be turned over to Amateur Radio use in the very near future. That was the word July 30 from AMSAT-UK Secretary Jim Heck, G3WGM, during the AMSAT-UK International Space Colloquium in Guildford, England.

Launched September 25, 1993, the satellite operated as a packet store-and-forward BBS (9600 baud FM FSK) on Amateur Radio frequencies for several weeks in early 1994. Over the years, PO-28's primary usage has been commercial, although plans have called for eventually shifting its operation to ham radio use. G3WGM reports that following lengthy negotiations it has been agreed that the satellite can be switched permanently to amateur frequencies. The changeover is expected to take a couple of weeks.

The Portuguese satellite was built at the University of Surrey as part of a collaborative satellite technology program that involved industry and academe. Uplink frequencies will be 145.925 and 145.975 MHz. Downlink frequencies will be 435.250 and 435.275 MHz. More information on PO-28 is on the AMSAT Web site http://www.amsat.org/amsat/sats/n7hpr/po28.html.

Uplink Frequencies: 145.925 and 145.975 MHz
Downlink Frequencies: 435.250 and 435.275 MHz

Orbit: 822 x 800 km, 98.6 deg inclined, sun-synchronous.

Transponder capabilities include FM repeater and 38k4 data. If you want to hear how loud this satellite is, listen on 429.950 until the change back to amateur radio service.

Keplerian elements for PO-28 are not currently contained in the AMSAT keps bulletins, but can be found at Celestrak in amateur.txt using the name "POSAT". Users of Space Track should query the NORAD Satellite ID number 22829. The name listed by Space Track is "EYESAT A".

More information of POSAT-1 can be found at:
http://www.ee.surrey.ac.uk/SSC/CSER/UOSAT/missions/posat1.html
http://www.amsat.org/amsat/sats/n7hpr/po28.html
[ANS-WSR wishes to thanks Trevor, M5AKA and Jim, G3WGM, for this week's information.]

Downlink: 435.812 MHz SSB
Broadcast Callsign: ITMSAT-11
BBS: ITMSAT-12

Alberto E. Zagni - I2KBD reports on 02/13/05
The spacecraft is in MBL (safe mode) and is trasmitting just 6 channels of telemetry. Temperatures and voltage are nominal, but there seems to be a problem with the onboard receiver, refusing to accept commands. The spacecraft was launched in 1993, thus nearing 12 years in orbit...

Best regards
Alberto E. Zagni - I2KBD
ITAMSAT Mission Director

PO-34 PANSAT
Catalog number: 25520
Launched: October 30, 1998

Status: Telemetry downloads only

Uplink/downlink frequency (listed on the PanSat web site) 436.500 MHz

The satellite is not available for general uplink transmissions.

The Naval Postgraduate School developed PanSat. At the time of launch, PanSat spread-spectrum digital transponders were to be available to Amateur Radio operators along with software to utilize this technology.

The satellite is still operating, however, the spread spectrum packet radio portion never took place. The spacecraft is now beyond it's initial 2-year mission life, but telemetry records are still being downloaded.

For more information, visit the official PanSat web site at:
http://www.sp.nps.navy.mil/pansat/
[05092004]
=====
SO-33 SEDSAT-1
Catalog number: 25509
Launched: October 24, 1998

Status: Semi-operational

Downlink: 437.910 MHz FM (9600-baud FSK)

The satellite is not currently available for uplink transmissions and the image and transponder recovery efforts have been unsuccessful.

For more information on SedSat-1 visit the satellite web site:
http://seds.uah.edu/projects/sedsat/sedsat.htm

[ANS has no further information]

AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German
scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS
e.V." (German
```

acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio anand telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at: http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

=====
PHASE 3E ?O-??
Catalog Number:
Proposed Launch Date: Early 2006

Status: Under Construction

William Leijenaar, PE1RAH reports on July 16th, 2005:

Hi AMSATs,

I always like to inform the AMSATs public about my P3e work, but unfortunatly due to
some reasons there was not much time and nothing much to say...

However, now I am happy to announce that the my MODE-UV transponder design for P3e is ready at the P3e integration place in Marburg (Germany). About 4 weeks ago I was in Marburg before, where the transponder has been checked. Unfortunatly some unsure things were found in the design. The unsure things were about long term stability after many years in space.

At home in The Netherlands, I changed the design with some minor changes to have a secure long term stability. Finally I tested the transponder again and it performed well within the specifications. Again something learned for future transponder designs :o)

Last Wednesday I drove to AMSAT-DL P3e integrations place in Marburg again, and have my transponder again checked. In the beginning it seemed that the 70cm receiver lost 10dB in sensetivity. After some more measurements we find out that it was due to a bad attenuator we used for protection at the input.

Together with Karl Meinzer we looked for any problems, but so far we could see (without HELAPS) all was okay. In the afternoon I went back home again, this time without the MODE-UV.

Now the MODE-UV will get a new home, the home of P3e... :o)
I hope the transponder will work like its elder sister in AO-10, and you all will enjoy it for many years...

It was lots of work to get it this far, but I know it is for a good purpose...

For the latest project status update please visit the AMSAT-DL
P3-E web page:
http://www.amsat-dl.org/p3e/

[ANS-WSR wishes to thank William Leijenaar, PE1RAH for this week's report]

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
        888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satelite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:

What polarization is used on AO-51? I'm using my 2M vertical whip for transmit and that seems to work OK to get into the satellite (I assume it's working OK as others are hearing me and calling back). I have a horizontal loop on the 435 receive side. Even on high elevation passes, it only gives S1 or S2 signals and lots of breaks in the audio. Should I also run a vertical antenna on 435? This setup is in the mobile, so I am unable to use any sort of steerable antenna. Ideas kindly welcomed!

Scott

AMSAT NEWS SERVICE
ANS-261

ANS is a free, weekly, news and information service of AMSAT North
America, The Radio Amateur Satellite Corporation. ANS reports on the

activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:
ans-editor@amsat.org

In this edition:

* AMSAT BoD, Annual Meeting, and Eagle Satellite Team Meeting
* 2005 AMSAT Board of Directors Election Results
* Hotel Survey for 2006 AMSAT Symposium
* SuitSat Hardware On-Orbit/SSTV Equipment Aboard ISS
* PCSAT2 Enabled for 1200 and 9600 Baud Digipeating Operation
* IGATE Manual Available On-line
* ARISS Status for the week of September 12, 2005
* SSETI Launch Information Sheet Released
* SatPC32 V12.4 Tracking Program DDESat32 Download Available
* AMSAT Awards This Week
* New Release of InstantTune Version 1.50

AMSAT BoD, Annual Meeting, and Eagle Satellite Team Meeting

AMSAT News Service Bulletin 261.01
From AMSAT HQ SILVER SPRING, MD.
September 18, 2005
To All RADIO AMATEURS
BID: $ANS-261.01

Rick Hambly, W2GPS, AMSAT-NA President, reminds all members that the 2005 AMSAT Board of Directors Meeting will be held on Thursday, October 6th and ending at noon on Friday, October 7th. The AMSAT Annual Meeting will follow later on Friday. An Eagle satellite design team meeting will follow on Friday afternoon through Sunday morning, October 7th through the 9th. These are open meetings and all AMSAT members and guests are invited to attend. We are staying at the Wyndham Pittsburgh Airport Hotel located near the Pittsburgh International Airport. The phone number of the hotel is 412-788-8800.

[ANS thanks Rick, W2GPS for the above information]

2005 AMSAT Board of Directors Election Results

AMSAT News Service Bulletin 261.02
From AMSAT HQ SILVER SPRING, MD.
September 18, 2005
To All RADIO AMATEURS

BID: $ANS-261.02

As a result of the 2005 AMSAT Board of Directors elections, Rick W2GPS, Emily W0EEC, Gunther W8GSM, and Barry WD4ASW will serve on the Board for two years. The first alternate is Bob N4HY and the second alternate is Lee KU4OS. The results of the voting are (829 votes were cast):

Richard M Hambly, W2GPS - 575
Emily Clarke, W0EEC - 483
Gunther Meisse, W8GSM - 466
Barry Baines, WD4ASW - 458
Bob McGwier, N4HY - 399
Lee McLamb, KU4OS - 380
Bruce Paige, KK5DO - 302
Greg Wycoff, N0ZHE - 131

Hotel Survey for 2006 AMSAT Symposium

AMSAT News Service Bulletin 261.03
From AMSAT HQ SILVER SPRING, MD.
September 18, 2005
To All RADIO AMATEURS
BID: $ANS-261.03

The 2006 Symposium planning committee would like to welcome AMSAT and ARISS to San Francisco. We invite everyone to participate in a survey about hotels and hotel services. The Bay Area has so much to offer we will be faced with a number of decisions between hotels, and what better way to make a decision than to give added weight to the preferences of the attendees.

The survey is located at:
http://www.amsat.org/amsat-new/symposium/survey.php

We want to lock in hotel rates early to get the best rates and we also want to give adequate time for people who have to cash in tickets they booked for Lafayette. So the survey will end on October 1. We hope to announce the hotel a few weeks later. So please express your opinions early before the survey ends.

In the future we will also have surveys about events, tours, spouse tours and things for kids, so please visit the Symposium part of the AMSAT website often.

Your opinions matter, and more importantly we want to make you welcome here in the bay area.

[ANS thanks Emily, W0EEC, and Project OSCAR, hosts of the 2006 AMSAT Symposium in the San Francisco Bay area for the above information]

SB SAT @ AMSAT $ANS-261.04
SuitSat Hardware On-Orbit/SSTV Equipment Aboard ISS

AMSAT News Service Bulletin 261.04
From AMSAT HQ SILVER SPRING, MD.
September 18, 2005
To All RADIO AMATEURS
BID: $ANS-261.04

Frank H. Bauer, KA3HDO, who is the ARISS International Chairman, AMSAT V.P. for Human Spaceflight Programs, and NASA ARISS Program Manager, provided an update on the status of the SuitSat and the SSTV gear for the ISS this week.

On Thursday September 8 at 13:08 UTC, Progress 19P lifted off from the Baikonur Cosmodrome in Kazakhstan. Included in the 2.5 tons of fuel, food and supplies are two Amateur Radio on the International Space Station (ARISS) systems---the Suitsat amateur radio hardware and the Slow Scan Television (SSTV) hardware and software. The successful docking of Progress to ISS on September 10 culminates the successful design, development, certification and delivery of these two ARISS Projects. The ISS Expedition 11 crew will unpack this equipment, making it available for installation, use and deployment by the Expedition 12 crew.

The Suitsat amateur radio system, coupled with a school artwork project, is planned to be installed in an outdated Russian Orlon spacesuit. It will then be deployed from the ISS during an Extra Vehicular Activity (EVA, or spacewalk). This is expected to occur in the December timeframe by the Expedition 12 crew. The Suitsat amateur radio system will beam down special messages and an SSTV image from within the Orlon space suit as it floats in space. Suitsat radio system will allow hams and students to track the suit and decode special international messages, space suit telemetry, and a pre-programmed Slow Scan TV image through its specially built digital voice messaging system and amateur radio transmitter. As built, Suitsat will be a transmit-only capability that will run on the space suit's battery power.

As part of the Suitsat project, a CD with hundreds of school pictures, artwork, poems, and student signatures is included. Two identical CDs were flown, one will go in the suit and the other will be for the crew to review. Using the crew CD, we hope to downlink these images using the SSTV system that will be located inside the Service Module once it is operational. There are approximately 300 items on the CD. These are from all over the world (Japan/Asia, Europe, Russia, Canada, US, South

America and Africa). Several NASA Explorer Schools participated as well as numerous ESA and Russian Space Agency-sponsored schools.

The idea for Suitsat was first conceived by the ARISS-Russia team, led by Sergey Samburov, RV3DR, and was extensively discussed at the joint AMSAT Symposium/ARISS International Partner meeting in October 2004. The project, also called Radioskaf or Radio Sputnik in Russia, is being led by project manager A. P. Alexandrov and Deputy Project Manager A. Poleshuk from RSC Energia, located in Korolev (Moscow area) Russia. On the US side, the hardware project development was led by AMSAT member Lou McFadin, W5DID.

Since October 2004 the Suitsat design concept matured and evolved due to the challenging development time constraints. In a very short timeframe, the ARISS international team designed built and tested a simple, yet fully featured system that we hope will inspire hams and students around the world.

The SSTV system will be installed inside the Service module as an integral part of the ARISS ham radio system. It will transmit and receive (JPG) still images from the International Space Station in a format called Slow Scan TV (SSTV). When fully operational, the SSTV system is capable of sending up to 480 images per day from ISS. It will also be able to receive images from amateur radio stations on Earth. This system will utilize the already installed Kenwood D-700 radio and the ARISS antennas mounted on the Service Module. The SSTV equipment flown on Progress 19P includes the SpaceCam software, a radio/computer interface module, and data cables. The dedicated laptop for SSTV operations will be launched on a subsequent Progress vehicle.

Over the course of the past several months, the Suitsat and SSTV system passed the stringent NASA and Energia safety certification process and were deemed ready for flight--clearing the way for the incorporation into the Progress 19P vehicle. More information on SSTV and Suitsat will be provided as we get closer to installation and deployment .

On behalf of the ARISS International team, I want to congratulate the Suitsat hardware development team and the SSTV development team on a job well done. We look forward to future operation of these systems on ISS, inspiring the next generation of space explorers.

ARISS is an international educational outreach program partnering the ISS space agency partners--NASA, RSA, ESA, JAXA, and CSA, with volunteers from the AMSAT and IARU (International Amateur Radio Union) organizations from participating countries. ARISS offers an inspirational opportunity for students to experience the excitement of Amateur Radio by talking directly with crewmembers on-board the International Space Station. Teachers, parents and communities see, first hand, how Amateur Radio and crewmembers on ISS can energize youngsters' interest in science, mathematics, technology, and learning. Further information on the ARISS program is available on the website http://www.rac.ca/ariss

[ANS thanks Frank, KA3HDO for the above information]

SB SAT @ AMSAT $ANS-261.05
PCSAT2 Enabled for 1200 and 9600 Baud Digipeating Operation

AMSAT News Service Bulletin 261.05
From AMSAT HQ SILVER SPRING, MD.
September 18, 2005
To All RADIO AMATEURS
BID: $ANS-261.05

The PCSAT2 packet system is enabled for both 1200 and 9600 baud digipeating, and it can also do cross-BAUD digipeating. That is 1200 up and 9600 down or 9600 up and 1200 down. We had no specific application in mind, but it is there for experimentation.

For 1200 or 9600 use the path VIA ARISS. For cross-BAUD operation use the path VIA XBAUD.

The easiest way to experiment is to use either the Kantronics KPC-9612+ TNC or the Kenwood D7 or D700 that can both easily switch between 1200 and 9600 baud.

Experiment with the shortest TXD delay you can get by with at 9600 baud. Typically for one-at-a-time packets like APRS, there is not much advantage for operating at 9600 baud, because the TXD delay is often as long or longer than the data, so the actual throughput advantage of 9600 is more like a factor of 2 than 8.

Perhaps the value of operating at 9600 baud would be in downloading Mail from the PCSAT2 PBBS. That is the only time when all the delays will be amortized and 9600 baud would give you a significant throughput advantage.

Users are welcome to use the PCSAT2 digipeater for experimentation.
   Uplink is 145.825
   Downlink 435.275 +/- 10 KHz Doppler
   DIGIpeater call is ARISS for 1200 or 9600
   DIGIpeater call is XBAUD for cross-baud
   PBBS callsign is MAIL-1

The Kenwood D7 and D700 can do either 1200 or 9600 and on either band, but not both baud rates at the same time. The KPC-9612+ can transmit either 1200 or 9600, but because it is dual port, it can receive both at the same time.

[ANS thanks Bob, WB4APR, and the US Naval Academy Satellite Lab for the above information]

/EX

SB SAT @ AMSAT $ANS-261.06
IGATE Manual Available On-line

AMSAT News Service Bulletin 261.06
From AMSAT HQ SILVER SPRING, MD.
September 18, 2005
To All RADIO AMATEURS
BID: $ANS-261.06

Cor, PD0RKC, has created an easy manual to make your APRS station also function as an IGATE station. When APRS stations send their beacons on the air, including via ISS and PCSAT2, the IGATE station receives the beacons and fowards them to the internet.

APRS packets, containing position coordinates or messages, received via the ISS and forwarded via IGATE stations can be viewed at:
http://www.findu.com/cgi-bin/ariss/index.cgi

The easy IGATE manual for UIVIEW can be found on-line at:
http://pd0rkc.mine.nu (click on the ISS button).

In case you can not visit Cor's website you can send him an e-mail so he can send you his IGATE information via e-mail:
isszarya (at) hotmail.com

[ANS thanks Cor, PD0RKC for the above information]

SB SAT @ AMSAT $ANS-261.07
ARISS Status for the week of September 12, 2005

AMSAT News Service Bulletin 261.07
From AMSAT HQ SILVER SPRING, MD.
September 18, 2005
To All RADIO AMATEURS
BID: $ANS-261.07

1. Japan Red Cross Contact Successful

The Japan Red Cross Radio Volunteer Corps of Fukui-prefecture, Wakasa Branch, in Obama-City, Fukui-ken, Japan had a successful ARISS contact with the ISS. The Radio Corps provides training on how to communicate via amateur radio during an emergency, and the students are also involved with the Wakasa branch of the Young Astronauts Club-Japan (YAC-J), which is lead by Japanese astronaut Mamoru Mouri. On September 8, astronaut John Phillips, KE5DRY, answered 15 questions posed to him by the thirteen students. Approximately 110 people gathered to observe the contact, including four newspapers, and four television stations. The audio, video, photos, and three newspaper articles covering the event may be found on ARISS member, Satoshi Yasuda's website.

See: http://jk1zrw.dyndns.org/ -Select "Successful School in Region 3", and then "The Japan Red Cross Corps" contact.

2. Upcoming School Contacts

Students from Sanderson High School in Sanderson, Texas will speak to John Phillips on Thursday, September 22 at 16:08 UTC.

3. AMSAT and ARISS Joint Meetings, 2006

ARISS plans to hold its international face to face meeting immediately following the 2006 AMSAT-NA Symposium which will be held in the San Francisco Bay area. Details for the joint meetings will be announced later this month.

4. PCSAT2 Mode Change

PCSAT2, which operated in PSK-31 mode for the last few weeks, has been changed to UI/APRS Packet digipeater mode.
See: http://www.ew.usna.edu/~bruninga/pec/pc2ops.html

SB SAT @ AMSAT $ANS-261.08
SSETI Launch Information Sheet Released

AMSAT News Service Bulletin 261.08
From AMSAT HQ SILVER SPRING, MD.
September 18, 2005
To All RADIO AMATEURS
BID: $ANS-261.08

The current status of the launch programme can be seen at
http://sseti.gte.tuwien.ac.at/WSW4/MOPWS/news.php

The latest version of the LEOPS information sheet is appended below. Its primary audience is "non amateur" so please do not be upset by some of the basic information and advice that it contains!

SSETI Express LEOPS (Launch & Early Operations) Info

These are the preliminary TLEs for SSETI Express based upon a launch at 06:52:26 UTC on September 27, 2005.

They will probably be updated just before launch and will certainly only work for a couple of days after launch. By then we should have received updates from NORAD and can then start to identify which orbit data refers to which satellite.

For the first few orbits they will also be valid for the cubesats and all the other payloads on the same launch. These are detailed below.

```
SSETI1
1 288XXU 0503XC   05270.28641000 -.00000001  00000-0  10000-4 0    12
2 288XX  98.1900 167.4100 0001920   0.0000  50.5000 14.60850000 00013
```

This data can be entered into any of the normal "tracking/prediction" programmes for display at launch events.

SSETI Express UHF transmitter will be activated approximately 100 minutes after launch. The details below give some information about what we expect to hear and when for Express and the cubesats.

To receive the UHF transmissions from Express and the cubesats there are two possibilities.

The simple possibility is a handheld receiver and simple hand held TV type yagi antenna which is pointed in the general expected direction. When Express is heard then this will only be obvious by a sudden burst of increased noise from the loudspeaker. - the 9k6 data sounds just like noise to the human ear! This will not be very impressive to invited guests but will make the Express teams themselves very happy. Remember to have three frequencies stored in the radio 437.260 MHz at AOS, 437.250 MHz for when the satellite is at its nearest point to you and 437.240 MHz as it moves away from you. This is Mr. Doppler at work.

The more complicated possibility is to use a "proper" receiving station with automatically steered circularly polarised antennas, a mast head preamp, Doppler adjusted UHF radio with a widened IF to pass the 9k6 data and a suitable TNC feeding a computer and display. With this set-up it should be possible to display the decoded telemetry from the satellite.

There is already a satellite in a very similar orbit using similar frequencies and modulation method to Express. This is called AO51 (Amsat Oscar 51) also known on some databases as Echo. It is strongly recommended that you use the signals from this satellite to test your receive system (simple or complicated options) so you have already had experience before the launch day and demonstration. AO51 has a variety of scheduled activity modes and frequencies and these can be checked here:
http://www.amsat.org/amsat-new/echo/ControlTeam.php
Most times it is radiating a voice signal and a 9k6 data signal simultaneously.

SSETI Express

Downlink: 437.250 MHz AX25 9k6 FSK
(also 2401.835 MHz 38k4 data and voice - but not for initial operations)

The first transmission will occur approximately 65 min after separation from the launch adaptor- approx 100 mins after launch - we now expect this now to occur around 08:32 UTC when Express is over northern Europe.

The type of the first transmissions will depend on the state of the battery.

In Nominal mode - a sub 1 second burst of AX25 telemetry every 18 seconds.

In Recovery or Safe mode - simple on/off telemetry comprising 16 x 100msec carrier pulses. This telemetry is repeated every 30 seconds in Safe Mode and every 2 mins when in Recovery Mode.

The satellite will transmit at a power of 3 watts.

The next time that Express can be heard over Europe will be the pass that starts in Aalborg at around 10:03 UTC. This pass gives good coverage of all of Europe and should also be audible from the launch site.

Reception reports will be welcome by email at operations@sseti.net or by placing them on the SSETI Newsgroup at slave.gte.tuwein.ac.at in the folder "sseti.express.report" where you will also be able to see reports from other locations around the world.

Full information on receiving SSETI Express signals, decoding the telemetry, submitting it to the project team and entering the competition will be posted at: http://sseti.gte.tuwien.ac.at/WSW4/MOPWS/news.php.
This will have links to all the updated pages as they occur.

NCUBE2: a cubesat which will be released by Express

Downlink: 437.305 MHz
Bitrate: 9600b/s
Modulation technique: GMSK

The first transmission will occur 20 min after separation from Express - approx 120 mins after launch.

The message: "DE=LA1CUB=NCUBE2=FF=LA1CUB===" is morsed using a 2400Hz tone, 26 words per minute where FF is a hex number [00=3,0V - FF=4,5V]
        If battery voltage is above 3,8V, every 2 minutes
        If battery voltage is below 3,8, every 5 minutes

At the end of the message an unnumbered AX.25 packet is attached containing the string:

DE=LA1CUB=NCUBE2=NORWEGIAN CUBESAT - WWW.NCUBE.NO
In the header of the AX.25: Callsign: NCUBE Destination: EARTH
The satellite will transmit at a power of 1.5 W at full battery charge
Reception reports will be welcome email to ncube@rocketrange.no or by phone +47 76 14 44 00

UWE-1: a cubesat which will be released by Express

Downlink 437.505 MHz. 9k6 FSK AX25 packet
The first transmission will occur 6 min after separation from Express approximately 106 minutes after launch.

The satellite will transmit for about 1 sec every 1 minute. The output power of the transceiver is approximately 1 watt.
Further details will be made available later.

Reception reports will be very welcome at cubesat@informatik.uni-wuerzburg.de.

CUBESAT Xi-V: a cubesat which will be released by Express

CW signal on 437.465 MHz
FM packet of AFSK AX.25 on 437.345 MHz
The first CW transmission will occur 30 minutes after separation from Express approximately 130 minutes after launch.
FM packet will not be transmitted unless commanded by the ground station.
The interval of the CW signal is about 30 seconds.
The output of CW signal is 80 mW, and that of FM packet is 800 mW.
Both signals share one dipole antenna, so the satellite cannot transmit both signals at the same time.
The email address to receive reports will be announced at the ground station web page http://gs.space.t.u-tokyo.ac.jp/ before launch.

SAFIR-S

A module integrated within the RUBIN experimental payload which will stay attached to the launch adaptor.
A frequency of 2401.900 MHz is used. Callsign DP1AIS
One transmission cycle consists of 15 sec. FM-voice beacon transmission and short 9k6 G3RUH data packets every 15 seconds. Total duration of the above described transmission cycle is about 2-3 minutes.
Reports can be sent to DG6BCE@aatis.de

MOZHAETS

There is also a satellite in the Mozhaets series included in this launch but no details of its transmissions are known.

LAUNCH DAY BROADCASTS

SATELLITE

The launch will be broadcast via ESA Television on Astra 1 G at 19.2 degrees east:

Transponder: 1.108
Reception frequency: 12551.50 MHz
Polarization: Vertical
Symbolrate: 22Msymb/s
FEC: 5/6
TS_ID: 1108
ON_ID: 1
Service Name: ESA
Service provider: ASTRA

Service_ID: 12140
TXT: none

This is always on and will transmit an ESA logo starting three days before the launch. The programme is expected to run for approximately 30 minutes and will include the launch sequence live from the Plesetsk launch site. To set up a new installation for use to receive the Astra 1G signals would need this sort of equipment:

A small dish (~50cm) with the correct LNB - (in the UK a "Sky dish and LNB" would be fine) - with either a FTA (free to air) set-top decoder feeding a normal TV or a DVB satellite box plugged into the back of a computer (either via a USB port or on a PCI card)

Also required is a clear view from the dish to the satellite and, of course, some coax cable to connect the two!

INTERNET

The ESA launch programme on ASTRA 1G will also be available as a webstream on the Internet. Details have recently changed and will be updated as soon as possible.

SSETI EXPRESS HANDBOOK

To coincide with the launch the SSETI Express Handbook has just been published. Written by Richard Limebear G3RWL, using ESA and AMSAT-UK documentation, the 22 page handbook covers just about every aspect of this exciting new spacecraft. It details AMSAT-UK's involvement in the project and contains a wealth of technical information about the spacecraft and the three Picosats that will be launched from it.

The PDF of the handbook can be downloaded free of charge from the AMSAT-UK website at http://www.uk.amsat.org/ or printed copies are available for �5 inc P&P in Europe from AMSAT-UK, "Badgers", Letton Close, Blandford, Dorset, DT11 7SS, United Kingdom. Tel: +44 (0)1258 453959 Email: g3wgm@amsat.org. Cheques should be made payable to "AMSAT-UK". Postage rates for other parts of the world available on request.

A French version of the handbook translated by Christophe Candebat F1MOJ is also available at the AMSAT-UK web site.

[ANS thanks Graham, UA/G3VZV, and Trevor, M5AKA for the above information]

SatPC32 V12.4 Tracking Program DDESat32 Download Available

AMSAT News Service Bulletin 261.09
From AMSAT HQ SILVER SPRING, MD.
September 18, 2005

To All RADIO AMATEURS
BID: $ANS-261.09

The new SatPC32 12.4 and Wisat32 12.4 work with the Wisp32 programs without any problem. Users of the tool DDESat32 who have updated to SatPC32 12.4 also need to update DDESat32 because DDESat32 is using some of the auxiliary files and rotor drivers of SatPC32. The DDESat32 update can be downloaded from my website (for free). DDESat32 is a tool that is particularly designed to be used with Wisp32. It is not part of the SatPC32 package and it comes with its own setup program.

Here is the link to download DDESat32:
http://www.dk1tb.de/ddesatsetup_124.zip

DK1TB has generously donated SatPC32 to AMSAT-NA, AMSAT-UK, and AMSAT-DL. If you use SatPC32, please purchase a registration code from one of these groups. All of the purchase price will go to support amateur satellite programs.

[ANS thanks Erich, DK1TB for the above information]

SB SAT @ AMSAT $ANS-261.11
New Release of InstantTune Version 1.50

AMSAT News Service Bulletin 261.11
From AMSAT HQ SILVER SPRING, MD.
September 18, 2005

To All RADIO AMATEURS
BID: $ANS-261.11

Tony, AA2TX, announced a new release of InstantTune which provides automatic radio tuning for use with InstantTrack. He said, "Since it is pretty old (at least for software,) I was not planning on producing anymore "official" releases of this package. However, I have added a few new features based on user requests and decided to offer them to everyone who wants them as a patch release."

The new features are as follows:

1. Velocity Interpolation
InstantTune will estimate a satellite's velocity between actual velocity updates from InstantTrack. This allows it to tune the radios 4x faster than it did before. The doppler shift is noticeable on 70cm downlinks but it really flies on the AO-51 (Echo) S-band downlink.

2. PL control
InstantTune can turn on the PL (CTCSS) encoder and set the tone frequency for the satellites that require it.

3. Hot Keys
From any InstantTrack screen, you can hit CTRL-B to tune the radio to the beacon. You can then hit CTRL-Q to return to the previously tuned QSO frequency. This allows you to quickly check the beacon and then go back to your QSO.

4. Improved FT-817 driver
The FT-817 driver worked fine when used as a receiver or transmitter but when used as a single-radio satellite station, the operation was a bit eratic. The new driver significantly improves this operation and I was easily able to make a VO-52 SSB contact using just an FT-817 feeding a pair of tripod mounted full wave loop antennas (a pretty minimal portable, QRP satellite station.)

5. FT857, FT897 support
These radios use the same driver as the FT-817 but you had to know to type in "ft817" in the config file. InstantTune will now recognize "ft857" and "ft897" as valid radio types.

The patch release also includes a new "itune.exe" control program with a few minor improvements not worth mentioning - just type "itune" at the DOS prompt and it will list all the commands. The new version, InstantTune Version 1.50, will work with Versions 1.50 or 1.55 of InstantTrack.

If you would like a copy of the patch release with these new features, send Tony an email via aa2tx at amsat.org.

InstantTune continues to support all of the popular Yaesu, Kenwood, and ICOM radios as well as any "mic-button" controlled radios. But note that I don't have access to Kenwood or ICOM radios to test with so I did not put in the PL control feature for those radio drivers. If someone would like it added for one of those radios, I will be happy to implement it as long as they are willing to test it.

As always, InstantTune is truly open source and it is fine with me if other developers use this source code to help develop new radio tuning software. If you would like a copy of the latest source code (mostly C++,) just send Tony an email.

[ANS thanks Tony, AA2TX for the above information]

This report is organized into 4 parts.
Part 1 - operational analog amateur satellites.
Part 2 - operational digital amateur satellites.
Part 3 - non - operational satellites
Part 4 - proposed satellites

SB SAT @ AMSAT <W8ISS $ANS-261.S1
WSR 261 Part 1 09/18/2005

AMSAT NEWS SERVICE BULLETIN 261.S1 FROM AMSAT HQ
SILVER SPRING, MD, SEPTEMBER 18, 2005
TO ALL RADIO AMATEURS
BID: $ANS-261.S1

VO-52 HAMSAT
Catalog Number: 28650
Launch Date: May 05,2005

Status: On orbit
Current Mode: U/V

Proposed frequencies:

Indian transponder:
Uplink : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacom : 145.940MHz continue carier signal

Dutch transponder:
Uplink : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacon : 145.860MHz 12WPM with CW message
[07242005]
=====
AO-51 ECHO
Catalog number: 28375
Launch date: June 29, 2004

Status: Testing
Curent Mode: PBBS - ON
      FM REPEATER - V/U

Analog voice downlink: 435.300 MHz FM
          435.150 MHz FM
Analog voice uplink: 145.880 MHZ FM
          145.920 MHz FM 67Hz PL tone
                       1268.700 MHz FM 67Hz PL tone

Digital Downlinks: 435.150 MHz FM, 38k4 Digital, PBP, 1 watt output
                       2401.200 MHz FM 38k4 bps, AX.25
Digital Uplink: 145.860 MHz FM, 9k6 Digital, Pacsat Broadcast
   Protocol (PBP)

Broadcast: PECHO-11
BBS: PECHO-12

Current scheduled operating modes:

```
Due to the on going Huricane Katrina Relief Efforts in the Gulf Coast
States,
AO-51 will continue in the default mode V/U with 9k6 Digital, V/U, PBP
BBS
mode. Updated information will be posted as soon as any changes are
made.

[ANS-WSR thanks Bill, VE7WFG for the above information]
[09112005]
=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink:    145.850 MHz (67.0 Hz PL tone) (See below for operating
          procedures)
Downlink:  436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that SO-50
has
shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of  74.4
Hz.
The
order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm
   the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT
   the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window
   will reset the 10 minute timer.
[09122004]
=====
FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink:     145.90 to 146.00 MHz CW/LSB
Downlink:   435.80 to 435.90 MHz CW/USB
Beacon:     435.795 MHz

Digital Mode JD
Uplink:     145.850 145.870 145.910 MHz FM
Downlink:   435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign:   8J1JCS
Digitalker: 435.910 MHz
```

John, N4QWL reports on July 16th, 2005:

Last evening I had a AOS to LOS qso with WI2W. FO-29 came up at 01:17z here in FM07 and I found WI2W and we chatted until 01:33z. The satellite was at 2 degrees elevation when I finally heard him start to crackle a bit. What a great QSO! To think that I watched this bird launch back in 1996 and it is still working so well is a real thrill. I believe I still have the video. I might just look for it and watch it again. Boy do I love this satellite stuff! Look for you all up there.

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will automatically analyze all digital telemetry from the satellite (such as current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[ANS-WSR wishes to thanks John, N4QWL for this week's report]
[07172005]
=====
AO-27 AMRAD
Catalog number: 22825
Launched: September 26, 1993

Status: Operational

Uplink: 145.850 MHz FM
Downlink: 436.795 MHz FM

The latest information on AO-27 from control operator Michael Wyrick, N3UC (former N4USI), can be found at:
http://www.ao27.org

An AO-27 question-and-answer page is available on the AMSAT-NA web site, with updates by Ray, W2RS. The URL is:
http://www.amsat.org/amsat/intro/ao27faq.html

[ANS-WSR thanks John, K6YK, for this week's AO-27 report]
[08292004]
=====
AO-7 AMSAT OSCAR 7
Catalog number: 07530
Launch Date: November 15, 1974

Status: Semi-operational in sunlight.
Return to active status: June 21,2002

Uplink: 145.850 to 145.950 MHz CW/USB Mode A
            432.125 to 432.175 MHz CW/LSB Mode B
Downlink: 29.400 to 29.500 MHz CW/USB Mode A
            145.975 to 145.925 MHz CW/USB Mode B
Beacon: 29.502 MHz, 145.972 MHz, 435.1 MHz, 2304.1 MHz

Emily, W0EEC has created a website to allow the users of AO-7 to record
contacts, observations and use of the satellite more effectively at:
http://www.emilyshouse.com/experthams/ao7/main.php
This includes the ability to log contacts.

Tim, K3TZ has written a program to decode AO-07 telemetry.
The program can be downloaded at:
http://www.qsl.net/k3tz/files/K3TZ_AO-07_Telemetry_Decoder_0.5.zip

For more AO-7 info:
http://www.amsat.org/amsat/sats/n7hpr/ao7.html

=====
INTERNATIONAL SPACE STATION (ISS) - ARISS
Catalog number: 25544
Launch date: November 20, 1998

Status: Operational
Current Mode: U/V CROSS-BAND REPEATER
Digipeater: Inactive

The current Expedition 11 crew is:
Commander Sergei Krikalev
Flight Engineer John Phillips

Worldwide packet uplink: 145.990 MHz FM
Region 1 voice uplink: 145.200 MHz FM
Region 2/3 voice uplink: 144.490 MHz FM
Worldwide downlink: 145.800 MHz FM

Repeater Uplink: 437.800 MHz FM
Repeater Downlink: 145.800 MHz FM
Doppler Shift is 10 KHz

Russian callsigns: RS0ISS, RZ3DZR
USA callsign: NA1SS
Packet station mailbox callsign: RS0ISS-11
Packet station keyboard callsign: RS0ISS-3
Digipeater callsign: ARISS

This from Frank Bauer, KA3HDO:
The SSTV system will be installed inside the Service module as an
integral
part of the ARISS ham radio system. It will transmit and receive (JPG)
still images from the International Space Station in a format called
Slow

Scan TV (SSTV). When fully operational, the SSTV system is capable of sending up to 480 images per day from ISS. It will also be able to receive images from amateur radio stations on Earth. This system will utilize the already installed Kenwood D-700 radio and the ARISS antennas mounted on the Service Module. The SSTV equipment flown on Progress 19P includes the SpaceCam software, a radio/computer interface module, and data cables. The dedicated laptop for SSTV operations will be launched on a subsequent Progress vehicle

This off the ARISS webpage:
< http://www.rac.ca/ariss/oindex.htm#New%20ARISS%20Operations >:
The ARISS program is pleased to announce that the amateur radio equipment aboard the International Space Station is now operating in cross-band repeat mode. We realize that many of you will miss the packet-operating mode. However, cross-band repeat allows further experimentation of the ISS amateur radio system

The downlink for this operating mode remains the same, so listen for the station on 145.80 MHz. The new uplink frequency is 437.80 MHz. All frequencies are subject to Doppler shifting. For further information on working satellites and adjusting for Doppler shift, please review Emily Clark's (W0EEC) excellent presentation on AMSAT's website:
http://www.amsat.org/amsat-new/information/faqs/Intro_sats.pdf

The ISS daily crew schedule can be found at:
http://spaceflight.nasa.gov/station/timelines/
Remember that the crew operates on UTC time. Also, all of the time line is NOT translated from Russian and posted.

SB SAT @ AMSAT <W8ISS $ANS-261.S2
WSR 261 Part 2 09/18/2005

AMSAT NEWS SERVICE BULLETIN 261.S2 FROM AMSAT HQ

SILVER SPRING, MD, SEPTEMBER 18, 2005
TO ALL RADIO AMATEURS
BID: $ANS-261.S2

PCSAT2 ?0-??
Catalog Number:
Launch Date: August 1, 2005

Status: Operational

PCSAT2 was installed on the exterior of the International Space Station and was activated on August 3, 2005.

PCSAT2 CAPABILITIES: PCSAT2 is attached to the ISS and so its operations must be in cooperation with the ARISS communications suite to minimize any mutual interference and to coordinate activities. Here are the capabilities of the PCSAT2 and ARISS payloads:

PCSAT SYSTEM A:

435.275 PCSAT2 DOWNLINK 1200 baud packet with uplink on 145.825
435.275 PCSAT2 DOWNLINK Occasional user PSK-31 continuous downlink
145.825 PCSAT2 DOWNLINK 1200 baud packet
PCSAT SYSTEM B:

437.975 PCSAT2 DOWNLINK periodic Solar Cell data and PCSAT2 telemetry at 9600 baud
437.975 PCSAT2 DOWNLINK TNC-B command downlink at 1200 baud
437.975 PCSAT2 DOWNLINK User Voice Repeater with VHF uplink
437.975 PCSAT2 DOWNLINK Packet digipeater with VHF uplink

It looks like PCSAT2 can best contribute at this time by operating in PSK-31 mode for the near future. This is a very exciting new transponder mode which solves the congestion problem on FM repeaters by letting multiple stations all communicate at the same time.

PSK-31 users are welcome to try out the new PCSAT2 PSK-31 transponder on ISS with an uplink on 29.402 +/- 1 KHz and downlink on 435.275 +/- Doppler using FM.

The FM downlink lets everyone operate full duplex and everyone to see the same view of the passband as everyone else. THus you can see exactly what your signal looks like to everyone else.

Help Wanted:

Here is your chance to become a viable part of the Amateur Satellite Community.

We are looking for a volunteer satellite packet station in Hawaii that is interested in helping with telemetry and sat-gating of PCSAT2 and ARISS packets. Requirements are:

1) General familiarity with packet
2) TNC connected to a cross band radio that can RX on UHF and TX on VHF.
3) modest UHF beam and rotator system.

Contact WB4APR for more information.

Packets seen from PCSAT2 can be reviewed at:
http://www.findu.com/cgi-bin/pcsat2.cgi

A screen shot of both the 9600 bps and 1200 bps decoded data as seen by Simon, 9W2QC, can be seen at:
http://www.9w2qc.net/pcsat2/

More information on PCSAT2 can be found at:
http://web.usna.navy.mil/~bruninga/pcsat2.html

[ANS-WSR thanks Bob, WB4APR and the U.S. Naval Academy Satellite Lab for the aboveinformation.]

[08282005}

=====

AO-51 ECHO
Catalog number: 28375
Launch date: June 29, 2004

Status: Testing
Curent Mode: PBBS - ON
FM REPEATER - V/U HIGH POWER

Analog voice downlink: 435.300 MHz FM
435.150 MHz FM
Analog voice uplink: 145.880 MHz FM
145.920 MHz FM 67Hz PL tone
1268.700 MHz FM 67Hz PL tone

Digital Downlinks: 435.150 MHz FM, 38k4 Digital, PBP, 1 watt output
2401.200 MHz FM 38k4 bps, AX.25
Digital Uplink: 145.860 MHz FM, 9k6 Digital, Pacsat Broadcast Protocol (PBP)

Broadcast: PECHO-11
BBS: PECHO-12

Current scheduled operating modes:

Due to the on going Huricane Katrina Relief Efforts in the Gulf Coast States, AO-51 will continue in the default mode V/U with 9k6 Digital, V/U, PBP BBS mode. Updated information will be posted as soon as any changes are made.

[ANS-WSR thanks Bill, VE7WFG for the above information]
[09112005]

=====

NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Non-Operational?????

Uplink/downlink: 145.827 MHz 1200 baud AX.25 AFSK via W3ADO-1
Aux/Uplink: 435.250 MHz 9600 baud via PCSAT-2 (off)
APRS Downlink: 144.390 MHz (Region 2)

PCSat is a 1200-baud APRS digipeater designed for use by stations using hand-held or mobile transceivers. Downlinks feed a central web site at: http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy under the guidance of Bob Bruninga, WB4APR.
[07242005]

=====

CUTE-1
Catalog number: 27844
Launched: June 30,2003

Status: Operational

Uplink: ?
Downlink: 436.8375 CW
              437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ?)
Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as OPERATIONAL?
Indeed it is very operational as a CUBESAT sending CW telemetry on 436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at

```
14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz.
Initial orbital parameters were period 101.4 min, apogee 831 km, perigee
819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

[ANS WSR wishes to thank Cliff, K7RR, for this week's information]
[07242005]
=====
GO-32 TECHSAT-1B
Catalog number: 25397
Launch Date: July 10, 1998

Status: Operational

Downlink:           435.225 MHz FM (9600-baud FSK)
                   (435.325 n/a - temperature problems)
Uplinks:            145.850, 145.890, 145.930 FM
                   1269.700, 1269.800, 1269.900 FM
Broadcast Callsign: 4XTECH-11
BBS Callsign:       4XTECH-12

More information of GO-32 can be found at:
http://www.iarc.org/techsat/techsat.html

=====
MO-46 TIUNGSAT-1
Catalog number: 26548
Launched: September 26, 2000

Status: Operational

Uplink:             145.850 or 145.925 MHz 9600-baud FSK
Downlink:           437.325 MHz
Broadcast callsign: MYSAT3-11
BBS:                MYSAT3-12

TiungSat-1 is Malaysia's first micro-satellite and in addition to
commercial land and weather imaging payloads offers FM and FSK
Amateur Radio communication.

TiungSat-1, named after the mynah bird of Malaysia, was developed as
a collaborative effort between the Malaysian government and Surrey
Satellite Technology Ltd.
[05152005]
=====
AO-16 PACSAT
Catalog number: 20439
Launch Date: January 22, 1990

Status: Semi-operational, the digipeater command is on and open for
APRS users.
```

Uplink: 145.90 145.92 145.94 145.96 MHz FM
                     (using 1200-baud Manchester FSK)
Downlink: 437.026 MHz SSB (1200-baud PSK)
Mode-S Beacon: 2401.1428 MHz
Broadcast Callsign: PACSAT-11
BBS: PACSAT-12

A WOD collection of current graphics along with general information and telemetry samples can be found at:
http://www.telecable.es/personales/ea1bcu
[05092004]
=====
UO-11 OSCAR-11
Catalog number: 14781
Launched: March 1, 1984

Status: Semi-operational?

Telemetry Downlink: 145.826 MHz. FM (1200-baud AFSK).
                    approx. 10 days ON, 10 days OFF
Mode-S Beacon: 2401.500 MHz. ... OFF
UHFBeacon: 435.025 MHz. ... OFF

OSCAR-11 is back! I received the good news, on Saturday morning, while at the AMSAT-UK Colloquium. This was entirely unexpected! On Sunday morning Bob G4VRC played me a recording of an early morning pass received that day.

During the period 21 July to 14 August 2005 consistent signals have been heard from 30 July to 08 August. Signals seem to be weaker than usual, confirmed by the many reports received. However,since I last heard the satellite on 30 April, I've reinstalled my antennas , which makes comparisons difficult.

Many thanks for all the recent reports of OSCAR-11 including those from KU7Z (who heard it first), KB2M, VK6XH, HK7MKE, KA2UPW, JE9PEL, G1OCN, HB9SKA and G8OQW.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working. One bit in channel 62, DSR mode, has changed from WRITE to READ. DSR is the Digital Store & Readout experiment. This could be significant if the experiment is still drawing current, but the other status bit indicates that it is switched OFF.

The on-board clock is now showing a very large error. It has lost approximately 19 days since 30 April. During the recent data collection period, the clock error has been changing at a decreasing rate. The size of the clock error and the rate at which it is changing is similar to the duration of the solar eclipse periods. This suggests that the clock might have been switching OFF during eclipses.

The eclipses have now ended, and the satellite should be in continuous sunlight for the remainder of this year, and well into next year. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures.

If the watchdog timer is still operating on a 20 day cycle, ie. approximately ten days ON followed by 10 days OFF, then the VHF beacon should resume transmissions around 18 August.

The Beacon frequencies are -

VHF 145.826 MHz. AFSK FM ASCII Telemetry

UHF 435.025 MHz. OFF

S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is www.users.zetnet.co.uk/clivew/

If you place this bulletin on a terrestrial packet network, please use the bulletin identifier $BID:U2RPT112.CWV, to prevent duplication.

[ANS-WSR thanks Clive, G3CWV, for the above information]

More information on UO-11 OSCAR-11 can be found at:
http://www.users.zetnet.co.uk/clivew/

SB SAT @ AMSAT <W8ISS $ANS-261.S3
WSR 261 Part 3 09/18/2005

AMSAT NEWS SERVICE BULLETIN 261.S3 FROM AMSAT HQ
SILVER SPRING, MD, SEPTEMBER 18, 2005
TO ALL RADIO AMATEURS
BID: $ANS-261.S3

THE FOLLOWING ARE IN ORBIT BUT ARE
NON-OPERATIONAL AT THIS TIME:

POSAT-1 PO-28
Catalog Number: 22829
Launched : September 25, 1993

Status: Operational - Not open for Amatuer use

Downlink: 435.250 MHz
435.275 MHz

Uplink: 145.925 MHz
145.975 MHz

Broadcast callsign: POSAT1-11
BBS callsign: POSAT1-12

PO-28 (POSAT-1), Portugal's first satellite, launched 12 years ago, will be turned over to Amateur Radio use in the very near future. That was the word July 30 from AMSAT-UK Secretary Jim Heck, G3WGM, during the AMSAT-UK International Space Colloquium in Guildford, England.

Launched September 25, 1993, the satellite operated as a packet store-and-forward BBS (9600 baud FM FSK) on Amateur Radio frequencies for several weeks in early 1994. Over the years, PO-28's primary usage has been commercial, although plans have called for eventually shifting its operation to ham radio use. G3WGM reports that following lengthy negotiations it has been agreed that the satellite can be switched permanently to amateur frequencies. The changeover is expected to take a couple of weeks.

The Portuguese satellite was built at the University of Surrey as part of a collaborative satellite technology program that involved industry and academe. Uplink frequencies will be 145.925 and 145.975 MHz. Downlink frequencies will be 435.250 and 435.275 MHz. More information on PO-28 is on the AMSAT Web site http://www.amsat.org/amsat/sats/n7hpr/po28.html.

Uplink Frequencies: 145.925 and 145.975 MHz
Downlink Frequencies: 435.250 and 435.275 MHz

Orbit: 822 x 800 km, 98.6 deg inclined, sun-synchronous.

Transponder capabilities include FM repeater and 38k4 data. If you want to hear how loud this satellite is, listen on 429.950 until the change back to amateur radio service.

Keplerian elements for PO-28 are not currently contained in the AMSAT keps bulletins, but can be found at Celestrak in amateur.txt using the name "POSAT". Users of Space Track should query the NORAD Satellite ID number 22829. The name listed by Space Track is "EYESAT A".

More information of POSAT-1 can be found at:
http://www.ee.surrey.ac.uk/SSC/CSER/UOSAT/missions/posat1.html
http://www.amsat.org/amsat/sats/n7hpr/po28.html

[ANS-WSR wishes to thanks Trevor, M5AKA and Jim, G3WGM, for this week's information.]

=====
AO-10 OSCAR 10
Catalog number: 14129
Launched: June 16, 1983

Status: Non-operational

Uplink: 435.030 to 435.180 MHz CW/LSB
Downlink: 145.975 to 145.825 MHz CW/USB
Beacon: 145.810 MHz (unmodulated carrier)

AO-10 has been locked into a Mode-B, 70-cm uplink and 2-meter downlink for several years.

W4SM has more information about the satellite at the following URL:
http://www.cstone.net/~w4sm/AO-10.html

=====
IO-26 ITAMSAT
Catalog number: 22826
Launch Date: September 26, 1993

Status: Non-operational

Uplink: 145.875 145.900 145.925 145.950 MHz FM (1200-baud)
Downlink: 435.812 MHz SSB
Broadcast Callsign: ITMSAT-11
BBS: ITMSAT-12

Alberto E. Zagni - I2KBD reports on 02/13/05
The spacecraft is in MBL (safe mode) and is trasmitting just 6 channels of telemetry. Temperatures and voltage are nominal, but there seems to be a problem with the onboard receiver, refusing to accept commands.
The spacecraft was launched in 1993, thus nearing 12 years in orbit...

Best regards
Alberto E. Zagni - I2KBD
ITAMSAT Mission Director

PO-34 PANSAT
Catalog number: 25520
Launched: October 30, 1998

Status: Telemetry downloads only

Uplink/downlink frequency (listed on the PanSat web site) 436.500 MHz

The satellite is not available for general uplink transmissions.

The Naval Postgraduate School developed PanSat. At the time of launch, PanSat spread-spectrum digital transponders were to be available to Amateur Radio operators along with software to utilize this technology.

The satellite is still operating, however, the spread spectrum packet radio portion never took place. The spacecraft is now beyond it's initial 2-year mission life, but telemetry records are still being downloaded.

For more information, visit the official PanSat web site at:
http://www.sp.nps.navy.mil/pansat/
[05092004]
=====
SO-33 SEDSAT-1
Catalog number: 25509
Launched: October 24, 1998

Status: Semi-operational

Downlink: 437.910 MHz FM (9600-baud FSK)

The satellite is not currently available for uplink transmissions and the image and transponder recovery efforts have been unsuccessful.

For more information on SedSat-1 visit the satellite web site:
http://seds.uah.edu/projects/sedsat/sedsat.htm

[ANS has no further information]

=====
AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)

Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio anand telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at: http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

=====
PHASE 3E ?O-??
Catalog Number:
Proposed Launch Date: Early 2006

Status: Under Construction

William Leijenaar, PE1RAH reports on July 16th, 2005:

Hi AMSATs,

I always like to inform the AMSATs public about my P3e work, but unfortunatly due to some reasons there was not much time and nothing much to say...

However, now I am happy to announce that the my MODE-UV transponder design for P3e is ready at the P3e integration place in Marburg (Germany). About 4 weeks ago I was in Marburg before, where the transponder has been checked. Unfortunatly some unsure things were found in the design. The unsure things were about long term stability after many years in space.

At home in The Netherlands, I changed the design with some minor changes to have a secure long term stability. Finally I tested the transponder again and it performed well within the specifications. Again something learned for future transponder designs :o)

Last Wednesday I drove to AMSAT-DL P3e integrations place in Marburg again, and have my transponder again checked. In the beginning it seemed that the 70cm receiver lost 10dB in sensetivity. After some more measurements we find out that it was due to a bad attenuator we used for protection at the input.

Together with Karl Meinzer we looked for any problems, but so far we could see (without HELAPS) all was okay. In the afternoon I went back home again, this time without the MODE-UV.

Now the MODE-UV will get a new home, the home of P3e... :o)
I hope the transponder will work like its elder sister in AO-10, and you all will enjoy it for many years...

It was lots of work to get it this far, but I know it is for a good purpose...

For the latest project status update please visit the AMSAT-DL P3-E web page:
http://www.amsat-dl.org/p3e/

[ANS-WSR wishes to thank William Leijenaar, PE1RAH for this week's report]

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
        888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satelite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Hi,

2nd post, the first contained an error, the new address should have been given as www.ukradioamateur.co.uk

Some of you, hopefully many of you, may be aware of the existence of the "Amateur Radio Course" project which provides a number on-line and downloadable tutorials for the various UK amateur radio examinations.

Due to the sudden, unexpected and unexplained withdrawal of support by the company who up to now have very kindly hosted our web-site free of charge, and their even more unexpected failure to communicate with me regarding how we might transfer or redirect the URL which they registered for us but now will not let us use, our site is no longer available to the clubs and individuals who benefited from it.

Can you therefore help us and please publicise as widely as possible the following information.

The "Amateur Radio Course" which was located at www.ukradioamateur.org is now relocated at www.ukradioamateur.co.uk

There may be a number of functions that are not working due to the sudden move, but they will be fixed within the next few days.

It remains, as always, a non-profit making activity sponsored and supported entirely by the group of individuals who give up their time and resources free of charge to support and promote interest in the hobby.

I apologise for posting this message in so many newsgroups, but I need the new URL to be publicised as rapidly as possible.

Many thanks to you for your help, best wishes and 73's

Chris
G8PUT

AMSAT NEWS SERVICE
ANS-268

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:

ans-editor@amsat.org

In this edition:
* SSETI Express Set to Launch 30 September 2005
* SSETI Express to Deploy Three Cubesats
* Cubesat "XI-V" Reception Reports Requested
* Special Event from Titan Missle Museum
* AO-51 Special Event - JOTA Weekend 15-16 Oct
* Suitsat Video Newsreel
* ARISS Status - 19 September 2005

SB SAT @ AMSAT $ANS-268.01
SSETI Express Set to Launch 30 September 2005

AMSAT News Service Bulletin 268.01
From AMSAT HQ SILVER SPRING, MD.
September 25, 2005
To All RADIO AMATEURS
BID: $ANS-268.01

At long last, official confirmation has been received that the SSETI Express launch is scheduled to take place at 06:52 on September 30th with October 1st as the backup date. SSETI Express will be launching from Plesetsk Cosmodrome on the Cosmos-3M LV

The launch of SSETI Express will be streamed to the Internet thanks to the efforts of Howard Long, G6LVB. The new URL for the Webstream will be http://www.streamingwizard.com/clients/space.asx

The first transmission will occur approximately 65 minutes after separation from the launch adaptor approximately 100 minutes after launch when Express is over northern Europe.

The type of the first transmissions will depend on the state of the battery.

In Nominal mode - a sub 1 second burst of AX25 9k6 FSK telemetry every 18 seconds on the downlink frequency of 437.250 MHz.

In Recovery or Safe mode - simple on/off telemetry comprising 16 x 100 msec carrier pulses. This telemetry is repeated every 30 seconds in Safe Mode and every 2 minutes when in Recovery Mode.

The satellite will transmit at a power of 3 watts.

Reception reports will be welcome by email at operations@sseti.net or by placing them on the SSETI Newsgroup at slave.gte.tuwein.ac.at in the folder "sseti.express.report" where you will also be able to see reports from other locations around the world.

Full information on receiving SSETI Express signals, decoding the telemetry, submitting it to the project team and entering the competition will be posted at:
http://sseti.gte.tuwien.ac.at/WSW4/MOPWS/news.php.

This will have links to all the updated pages as they occur.

AMSAT-UK produce a newsletter "Oscar News" which is full of satellite information.

SB SAT @ AMSAT $ANS-268.02
SSETI Express to Deploy Three Cubesats

AMSAT News Service Bulletin 268.02
From AMSAT HQ SILVER SPRING, MD.
September 25, 2005
To All RADIO AMATEURS
BID: $ANS-268.02

SSETI Express will be launching from Plesetsk Cosmodrome on the Cosmos-3M LV on September 30, 2005 at 06:52:26 UTC. Satellites that will be launched from Cosmos-3M are Topsat, China DMC and SSETI Express.

>From SSETI Express three CubeSats will be deployed: NCUBE-2, UWE-1, and XI-V. This is a great opportunity for everyone in the Cubesat community to use and test their earthstations to track and communicate with the satellites once they are deployed from the LV.

The information regarding the cubesats and their TLEs is located on the CubeSat Website, www.cubesat.org The CubeSat website will contain links to more detailed information and operations about SSETI Express and the CubeSats as well as general information for tracking purposes. The expected TLEs will be posted when the satellites are launched. A SSETI Express discussion board has been created; you must login-in to post on the discussion board. Fully functionality of the tools will occur as the launch approaches.

SB SAT @ AMSAT $ANS-268.03
Cubesat "XI-V" Reception Reports Requested

AMSAT News Service Bulletin 268.03
From AMSAT HQ SILVER SPRING, MD.
September 25, 2005
To All RADIO AMATEURS
BID: $ANS-268.03

The University of Tokyo Intelligent Space Systems Laboratory (ISSL) is preparing for the launch of their second CubeSat called "XI-V" (sai-five). XI-V launched with and then separated from SSETI Express.

The XI-V team would appreciate reception reports of signals from XI-V. Reports or received data may be sent via email to xi5report@space.t.u-tokyo.ac.jp or upload any data file through the web http://www.space.t.u-tokyo.ac.jp/cubesat/upload/xi5report-e.aspx

The specification of the transmitter is as follows:
CW morse-coded signal is on 437.465MHz +/- doppler, output power is 80mW
FM packet of AFSK AX.25 is on 437.345MHz +/- doppler, output power is 800mW.

The details can be seen at
http://www.space.t.u-tokyo.ac.jp/gs/satinfo-e.html#xi5

Although the FM packet will not be transmitted unless commanded by the ground station at Tokyo, CW signal is always ON, so anyone can receive it. The format of the CW signal is available at
http://www.space.t.u-tokyo.ac.jp/gs/application-e.html#xi5

Initially the TLE of SSETI Express (provided by Graham) will be adequate for acquisition as the separation velocity is so small that the deviation from the orbit of SSETI Express will be negligible for a few days.

Event Timeline:

Sep 30 06:52:26 (UTC)	Launch
Sep 30 08:37:26 (UTC)	Separation of XI-V
Sep 30 09:08:00 (UTC)	Start of CW transmission (which will occur over the pacific ocean)

Due to the power limitation, the initial interval of the CW signal is about 30 seconds, and it will be very difficult to catch its signal. The XI-V would greatly appreciate help receiving data.
Any format of received data is welcome.

If you have anything to ask, please send email to
cube_info@space.t.u-tokyo.ac.jp

[ANS thanks Ryu Funase for the above information]

Special Event from Titan Missle Museum

AMSAT News Service Bulletin 268.04
From AMSAT HQ SILVER SPRING, MD.
September 25, 2005
To All RADIO AMATEURS
BID: $ANS-268.04

On October 1, the Green Valley Amateur Radio Club will be conducting a special event operation from the Titan Missile Museum National Historic Site, in neighboring Sahuarita, AZ (DM41). While most of the operation will be on HF, we plan to be on SO-50, and, if the FM transponder is active at the time, AO-51, using the call N7GV. A special certificate is available free of charge (SASE please) to anyone working the station. Please QSL to W0KAD. Further details appear on p. 101 of October QST.

The Titan Missile Museum National Historic Site houses the only remaining Titan II ICBM, intact in its original silo except for the propellants and nuclear warhead. The site was operational from 1963 to 1981. The facility is open to visitors daily, with guided tours available.

SB SAT @ AMSAT $ANS-268.05
AO-51 Special Event - JOTA Weekend 15-16 Oct

AMSAT News Service Bulletin 268.05
From AMSAT HQ SILVER SPRING, MD.
September 25, 2005
To All RADIO AMATEURS
BID: $ANS-268.05

The annual Boy and Girl Scouts "Jamboree on the Air" Amateur Radio event is scheduled for 15 and 16 October 2005. As this is an International Scouting event, amateur radio stations around the world are invited to participate. The AO-51 command team is scheduling the satellite for exclusive use by the Scouts, and Satellite operators communicating with the Scouts, for this weekend. Please allow the Scouts the opportunity to make as many contacts as possible via AO-51 during this short time period. Base stations, please remember that most of the JOTA stations will be portable, so please use minimum power. The official times for the JOTA event will be from 1200 UTC on October 15 until 1200 UTC on October 17, 2005.

For the JOTA weekend, AO-51 will be configured in the Dual FM repeater mode. This will provide two independent FM repeaters (separate uplink and downlink frequencies) for use over the weekend. Both repeaters will be for use by the JOTA activity. This mode will run Monday through Friday before the event to allow amateur satellite stations to familiarize and test this mode. The configuration of the satellite frequencies for this mode is listed below.

AO-51 FM repeater #1
Downlink: 435.300 MHz
Uplink: 145.920 MHz with 67hz PL Tone

AO-51 FM repeater #2
Downlink: 435.150 MHz
Uplink: 145.880 MHz with NO PL Tone

Here are some web links for information on the JOTA weekend activity.
http://www.arrl.org/FandES/ead/jota.html and
http://www.arrl.org/FandES/ead/ideas.html
http://www.scouting.org/international/jota.html

If your local club has a JOTA activity planned for the weekend please consider volunteering your services to provide a satellite communication station for the event.

Thanks for your support and participation.

SB SAT @ AMSAT $ANS-268.07
ARISS Status - 19 September 2005

AMSAT News Service Bulletin 268.07
From AMSAT HQ SILVER SPRING, MD.
September 25, 2005
To All RADIO AMATEURS
BID: $ANS-268.07

1. NES School Contact Successful

On Friday, September 16, children from the Matthew J. Kuss Middle School in Fall River, Massachusetts, experienced a successful contact with John Phillips, KE5DRY. The amateur radio station was set up in the school library where twelve students asked 22 questions of the astronaut. Two of the students came from Central Park Middle School, another NASA Explorer School (NES), and six of the students (all girls) were amateur radio operators. The audio and video were fed, via amateur radio television, to a nearby church where 100 students, parents, teachers, and local dignitaries gathered to watch.

The event drew a great deal of media attention with television stations including NBC affiliate, WJAR (Channel 10), Fox affiliate WPRI (Channel 12), ABC affiliate WLNE (Channel 6), Comcast Local Channel 9, and Fall River Educational Television (FRED-TV). Newspapers in attendance included the Fall River Spirit and the Fall River Herald News. In addition, the Museum of Science, Boston, was producing a documentary of the school contact.

The Fall River Herald News article, "Long-distance call," may be viewed online. See:
http://www.heraldnews.com/site/news.cfm?newsid=15228976&BRD=1710&PAG=461&dept_id=99784&rfi=8

2. Upcoming School Contacts

Tregaron High School in Tregaron, Ceredigion, Wales, United Kingdom, has been scheduled for an ARISS contact. It will take place on Thursday, September 29 at 11:28 UTC.

3. Upcoming School Contacts with Space Tourist

Space Tourist, Greg Olsen, will fly with the Expedition 12 crew slated to launch on October 1. He plans to make three ARISS contacts during his 8 day visit on board the ISS. The tentative dates and times for these contacts follow.

On Wednesday, October 5 at 16:58 UTC, Olsen will speak to students at Princeton High School in Princeton, New Jersey. The contact will be direct via N2RE.

Students from Fort Hamilton High School in Brooklyn, New York will speak to the space traveler via the telebridge station, VK5ZAI, in Australia. The contact is scheduled for Thursday, October 6 at 15:07 UTC.

Olsen will speak to the students at Ridgefield Park High School in Ridgefield Park, New Jersey via the telebridge station ZS6BTD in South Africa. The contact will take place on Friday, October 7 at 13:32 UTC.

4. ARRL Article on Japan Red Cross Contact

On September 8, the Japan Red Cross Radio Volunteer Corps of Fukui-prefecture, Wakasa Branch, in Obama-City, Fukui-ken, Japan experienced a successful amateur radio contact with astronaut John Phillips, KE5DRY. The ARRL article, "Young Japanese Astronaut Hopefuls Discuss ET, Other Topics," covers the event, and provides links to the audio and video. See:
http://www.arrl.org/news/stories/2005/09/16/6/?nc=1

5. Astronaut Training Status

On Wednesday, September 7, astronaut Sandy Magnus took and passed her amateur radio exam. Her new callsign is KE5FYE. Congratulations, Sandy!

Mission Specialist Bob Behnken attended an amateur radio training class at JSC on Monday, September 12. He is scheduled for another session on September 21 to prepare him for his technician's exam.

6. ARRL Article on SSTV and SuitSat Hardware

ARRL ran a web story covering the new ARISS hardware which was launched September 8, and is now on-orbit. The article, "'SuitSat', New ARISS SSTV Gear Arrives at International Space Station," may be found at:
http://www.arrl.org/news/stories/2005/09/16/2/?nc=1

7. AMSAT and ARISS Joint Meetings, 2006

The 2006 AMSAT-NA Space Symposium will be held in the San Francisco Bay area. ARISS plans to hold its international face to face meeting immediately following the AMSAT-NA conference. The 2006 Symposium planning committee has begun working on next year's meeting and has asked for input. To voice an opinion on hotel and location preferences, go to:
http://www.amsat.org/amsat-new/symposium/survey.php

8. Hams Commended on their Aid at Stennis

A Stennis Space Center facility is serving as the Emergency Operations Center (EOC) for Hancock County, MS; the original EOC was destroyed by Hurricane Katrina. Amateur Radio operator Randy Pierce, AG4UU, from Tallahassee, Florida, is stationed at Stennis, and reports that Amateur Radio operators are serving as communicators for all the services at the EOC, including the fire department and the emergency medical system. Four radio operators are still needed each day. The Amateur Radio operators' technical capabilities have been employed, and the hams were complimented by the Hancock County Sheriff's Office and County Commissioners.

[ANS thanks Carol, KB3LKI for the above information]

AO-51 Special Event - JOTA Weekend 15-16 Oct

The annual Boy and Girl Scouts "Jamboree on the Air" Amateur Radio event is scheduled for 15 and 16 October 2005. As this is an International Scouting event, amateur radio stations around the world are invited to participate. The AO-51 command team is scheduling the satellite for exclusive use by the Scouts, and Satellite operators communicating with the Scouts, for this weekend. Please allow the Scouts the opportunity to make as many contacts as possible via AO-51 during this short time period. Base stations, please remember that most of the JOTA stations will be portable, so please use minimum power. The official times for the JOTA event will be from 1200 UTC on October 15 until 1200 UTC on October 17, 2005.

For the JOTA weekend, AO-51 will be configured in the Dual FM repeater mode. This will provide two independent FM repeaters (separate uplink and downlink frequencies) for use over the weekend. Both repeaters will be for use by the JOTA activity. This mode will run Monday through Friday before the event to allow amateur satellite stations to familiarize and test this mode. The configuration of the satellite frequencies for this mode is listed below.

AO-51 FM repeater #1
Downlink: 435.300 MHz
Uplink: 145.920 MHz with 67hz PL Tone

AO-51 FM repeater #2
Downlink: 435.150 MHz
Uplink: 145.880 MHz with NO PL Tone

Here are some web links for information on the JOTA weekend activity.
http://www.arrl.org/FandES/ead/jota.html
http://www.arrl.org/FandES/ead/ideas.html
http://www.scouting.org/international/jota.html

If your local club has a JOTA activity planned for the weekend please consider volunteering your services to provide a satellite communication station for the event.

Thanks for your support and participation.

[ANS-WSR thanks Mike Kingery, KE4AZN for the above information]

=====

SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that SO-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz. The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10 minute timer.

[09122004]
=====
FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

John, N4QWL reports on July 16th, 2005:

Last evening I had a AOS to LOS qso with WI2W. FO-29 came up at 01:17z here in FM07 and I found WI2W and we chatted until 01:33z. The satellite was at 2 degrees elevation when I finally heard him start to crackle a bit. What a great QSO! To think that I watched this bird launch back in 1996 and it is still working so well is a real thrill. I believe I still have the video. I might just look for it and watch it again. Boy do I love this satellite stuff! Look for you all up there.

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will automatically analyze all digital telemetry from the satellite (such as current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[ANS-WSR wishes to thanks John, N4QWL for this week's report]
[07172005]
=====
AO-27 AMRAD
Catalog number: 22825
Launched: September 26, 1993

Status: Operational

Uplink: 145.850 MHz FM

Downlink: 436.795 MHz FM

The latest information on AO-27 from control operator Michael Wyrick,
N3UC (former N4USI), can be found at:
http://www.ao27.org

An AO-27 question-and-answer page is available on the AMSAT-NA web
site, with updates by Ray, W2RS. The URL is:

Digipeater callsign: ARISS

This from Frank Bauer, KA3HDO:
The SSTV system will be installed inside the Service module as an integral part of the ARISS ham radio system. It will transmit and receive (JPG) still images from the International Space Station in a format called Slow Scan TV (SSTV). When fully operational, the SSTV system is capable of sending up to 480 images per day from ISS. It will also be able to receive images from amateur radio stations on Earth. This system will utilize the already installed Kenwood D-700 radio and the ARISS antennas mounted on the Service Module. The SSTV equipment flown on Progress 19P includes the SpaceCam software, a radio/computer interface module, and data cables. The dedicated laptop for SSTV operations will be launched on a subsequent Progress vehicle

This off the ARISS webpage:
< http://www.rac.ca/ariss/oindex.htm#New%20ARISS%20Operations >:
The ARISS program is pleased to announce that the amateur radio equipment aboard the International Space Station is now operating in cross-band repeat mode. We realize that many of you will miss the packet-operating mode. However, cross-band repeat allows further experimentation of the ISS amateur radio system

The downlink for this operating mode remains the same, so listen for the station on 145.80 MHz. The new uplink frequency is 437.80 MHz. All frequencies are subject to Doppler shifting. For further information on working satellites and adjusting for Doppler shift, please review Emily Clark's (W0EEC) excellent presentation on AMSAT's website:
http://www.amsat.org/amsat-new/information/faqs/Intro_sats.pdf

The ISS daily crew schedule can be found at:
http://spaceflight.nasa.gov/station/timelines/
Remember that the crew operates on UTC time. Also, all of the time line is NOT translated from Russian and posted.

WSR 268 Part 2 09/25/2005

AMSAT NEWS SERVICE BULLETIN 268.S2 FROM AMSAT HQ
SILVER SPRING, MD, SEPTEMBER 25, 2005
TO ALL RADIO AMATEURS
BID: $ANS-268.S2

PCSAT2 ?0-??
Catalog Number:
Launch Date: August 1, 2005

Status: Operational

PCSAT2 was installed on the exterior of the International Space Station and was activated on August 3, 2005.

PCSAT2 CAPABILITIES: PCSAT2 is attached to the ISS and so its operations must be in cooperation with the ARISS communications suite to minimize any mutual interference and to coordinate activities. Here are the capabilities of the PCSAT2 and ARISS payloads:

PCSAT SYSTEM A:

435.275 PCSAT2 DOWNLINK 1200 baud packet with uplink on 145.825
435.275 PCSAT2 DOWNLINK Occasional user PSK-31 continuous downlink
145.825 PCSAT2 DOWNLINK 1200 baud packet
PCSAT SYSTEM B:

437.975 PCSAT2 DOWNLINK periodic Solar Cell data and PCSAT2 telemetry at 9600 baud
437.975 PCSAT2 DOWNLINK TNC-B command downlink at 1200 baud
437.975 PCSAT2 DOWNLINK User Voice Repeater with VHF uplink
437.975 PCSAT2 DOWNLINK Packet digipeater with VHF uplink

It looks like PCSAT2 can best contribute at this time by operating in PSK-31 mode for the near future. This is a very exciting new transponder mode which solves the congestion problem on FM repeaters by letting multiple stations all communicate at the same time.

PSK-31 users are welcome to try out the new PCSAT2 PSK-31 transponder on ISS with an uplink on 29.402 +/- 1 KHz and downlink on 435.275 +/- Doppler using FM.

The FM downlink lets everyone operate full duplex and everyone to see the same view of the passband as everyone else. THus you can see exactly what your signal looks like to everyone else.

Help Wanted:

Here is your chance to become a viable part of the Amateur
Satellite Community.

We are looking for a volunteer satellite packet
station in Hawaii that is interested in helping with
telemetry and sat-gating of PCSAT2 and
ARISS packets. Requirements are:

1) General familiarity with packet
2) TNC connected to a cross band radio that
     can RX on UHF and TX on VHF.
3) modest UHF beam and rotator system.

Contact WB4APR for more information.

Packets seen from PCSAT2 can be reviewed at:
http://www.findu.com/cgi-bin/pcsat2.cgi

A screen shot of both the 9600 bps and 1200 bps decoded data
as seen by Simon, 9W2QC, can be seen at:
http://www.9w2qc.net/pcsat2/

More information on PCSAT2 can be found at:
http://web.usna.navy.mil/~bruninga/pcsat2.html

[ANS-WSR thanks Bob, WB4APR and the U.S. Naval Academy Satellite Lab for
the aboveinformation.]

AO-51 ECHO
Catalog number: 28375
Launch date: June 29, 2004

Status: Testing
Curent Mode: PBBS - ON
      FM REPEATER - V/U HIGH POWER

Analog voice downlink: 435.300 MHz FM
         435.150 MHz FM
Analog voice uplink: 145.880 MHz FM
         145.920 MHz FM 67Hz PL tone
                       1268.700 MHz FM 67Hz PL tone

Digital Downlinks: 435.150 MHz FM, 38k4 Digital, PBP, 1 watt output
                       2401.200 MHz FM 38k4 bps, AX.25
Digital Uplink: 145.860 MHz FM, 9k6 Digital, Pacsat Broadcast
   Protocol (PBP)

Broadcast: PECHO-11
BBS: PECHO-12

Current scheduled operating modes:

26 Sept
FM Repeater, V/U
Uplink: 145.920 mhz FM, 67 hz PL Tone
Downlink 435.300 mhz FM
9k6 Digital, V/U, PBP BBS (Pacsat Broadcast Protocol BBS)
Uplink: 145.860 mhz FM, 9k6 PBP Digital
Downlink: 435.150 mhz FM, 9k6 PBP Digital

AO-51 Special Event - JOTA Weekend 15-16 Oct

The annual Boy and Girl Scouts "Jamboree on the Air" Amateur Radio event is scheduled for 15 and 16 October 2005. As this is an International Scouting event, amateur radio stations around the world are invited to participate. The AO-51 command team is scheduling the satellite for exclusive use by the Scouts, and Satellite operators communicating with the Scouts, for this weekend. Please allow the Scouts the opportunity to make as many contacts as possible via AO-51 during this short time period. Base stations, please remember that most of the JOTA stations will be portable, so please use minimum power. The official times for the JOTA event will be from 1200 UTC on October 15 until 1200 UTC on October 17, 2005.

For the JOTA weekend, AO-51 will be configured in the Dual FM repeater mode. This will provide two independent FM repeaters (separate uplink and downlink frequencies) for use over the weekend. Both repeaters will be for use by the JOTA activity. This mode will run Monday through Friday before the event to allow amateur satellite stations to familiarize and test this mode. The configuration of the satellite frequencies for this mode is listed below.

AO-51 FM repeater #1
Downlink: 435.300 MHz
Uplink: 145.920 MHz with 67hz PL Tone

AO-51 FM repeater #2
Downlink: 435.150 MHz
Uplink: 145.880 MHz with NO PL Tone

Here are some web links for information on the JOTA weekend activity.
http://www.arrl.org/FandES/ead/jota.html
http://www.arrl.org/FandES/ead/ideas.html
http://www.scouting.org/international/jota.html

If your local club has a JOTA activity planned for the weekend please consider volunteering your services to provide a satellite communication station for the event.

Thanks for your support and participation.

[ANS-WSR thanks Mike Kingery, KE4AZN for the above information]

[09252005]
=====
NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Non-Operational?????

Uplink/downlink: 145.827 MHz 1200 baud AX.25 AFSK via W3ADO-1
Aux/Uplink: 435.250 MHz 9600 baud via PCSAT-2 (off)
APRS Downlink: 144.390 MHz (Region 2)

PCSat is a 1200-baud APRS digipeater designed for use by stations using hand-held or mobile transceivers. Downlinks feed a central web site at:
http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy under the guidance of Bob Bruninga, WB4APR.
[07242005]
=====
CUTE-1
Catalog number: 27844
Launched: June 30,2003

Status: Operational

Uplink: ?
Downlink: 436.8375 CW
              437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ?)
Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as OPERATIONAL?
Indeed it is very operational as a CUBESAT sending CW telemetry on 436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at 14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz. Initial orbital parameters were period 101.4 min, apogee 831 km, perigee 819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

[ANS WSR wishes to thank Cliff, K7RR, for this week's information]
[07242005]

=====

UO-11 OSCAR-11
Catalog number: 14781
Launched: March 1, 1984

Status: Semi-operational?

Telemetry Downlink: 145.826 MHz. FM (1200-baud AFSK).
approx. 10 days ON, 10 days OFF
Mode-S Beacon: 2401.500 MHz. ... OFF
UHFBeacon: 435.025 MHz. ... OFF

OSCAR-11 is back! I received the good news, on Saturday morning, while at the AMSAT-UK Colloquium. This was entirely unexpected! On Sunday morning Bob G4VRC played me a recording of an early morning pass received that day.

During the period 21 July to 14 August 2005 consistent signals have been heard from 30 July to 08 August. Signals seem to be weaker than usual, confirmed by the many reports received. However,since I last heard the satellite on 30 April, I've reinstalled my antennas , which makes comparisons difficult.

Many thanks for all the recent reports of OSCAR-11 including those from KU7Z (who heard it first), KB2M, VK6XH, HK7MKE, KA2UPW, JE9PEL, G1OCN, HB9SKA and G8OQW.

All the analogue telemetry channels, 0 to 59 are zero, ie they have failed. The status channels 60 to 67 are still working. One bit in channel 62, DSR mode, has changed from WRITE to READ. DSR is the Digital Store & Readout experiment. This could be significant if the experiment is still drawing current, but the other status bit indicates that it is switched OFF.

The on-board clock is now showing a very large error. It has lost approximately 19 days since 30 April. During the recent data collection period, the clock error has been changing at a decreasing rate. The size of the clock error and the rate at which it is changing is similar to the duration of the solar eclipse periods. This suggests that the clock might have been switching OFF during eclipses.

The eclipses have now ended, and the satellite should be in continuous sunlight for the remainder of this year, and well into next year. This should help the satellite to continue transmitting, although continuous sunlight can cause problems due to excessive temperatures.

If the watchdog timer is still operating on a 20 day cycle, ie. approximately ten days ON followed by 10 days OFF, then the VHF beacon should resume transmissions around 18 August.

The Beacon frequencies are -

VHF 145.826 MHz. AFSK FM ASCII Telemetry

UHF 435.025 MHz. OFF

S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website which contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is www.users.zetnet.co.uk/clivew/

If you place this bulletin on a terrestrial packet network, please use the bulletin identifier $BID:U2RPT112.CWV, to prevent duplication.

[ANS-WSR thanks Clive, G3CWV, for the above information]

More information on UO-11 OSCAR-11 can be found at:

BID: $ANS-268.S3

THE FOLLOWING ARE IN ORBIT BUT ARE
NON-OPERATIONAL AT THIS TIME:

POSAT-1 PO-28
Catalog Number: 22829
Launched : September 25, 1993

Status: Operational - Not open for Amatuer use

```
Downlink: 435.250 MHz
          435.275 MHz

Uplink:   145.925 MHz
          145.975 MHz
```

Broadcast callsign: POSAT1-11

BBS callsign: POSAT1-12

PO-28 (POSAT-1), Portugal's first satellite, launched 12 years ago, will be turned over to Amateur Radio use in the very near future. That was the word July 30 from AMSAT-UK Secretary Jim Heck, G3WGM, during the AMSAT-UK International Space Colloquium in Guildford, England.

Launched September 25, 1993, the satellite operated as a packet store-and-forward BBS (9600 baud FM FSK) on Amateur Radio frequencies for several weeks in early 1994. Over the years, PO-28's primary usage has been commercial, although plans have called for eventually shifting its operation to ham radio use. G3WGM reports that following lengthy negotiations it has been agreed that the satellite can be switched permanently to amateur frequencies. The changeover is expected to take a couple of weeks.

The Portuguese satellite was built at the University of Surrey as part of a collaborative satellite technology program that involved industry and academe. Uplink frequencies will be 145.925 and 145.975 MHz. Downlink frequencies will be 435.250 and 435.275 MHz. More information on PO-28 is on the AMSAT Web site http://www.amsat.org/amsat/sats/n7hpr/po28.html.

Uplink Frequencies: 145.925 and 145.975 MHz
Downlink Frequencies: 435.250 and 435.275 MHz

Orbit: 822 x 800 km, 98.6 deg inclined, sun-synchronous.

Transponder capabilities include FM repeater and 38k4 data. If you want to hear how loud this satellite is, listen on 429.950 until the change back to amateur radio service.

Keplerian elements for PO-28 are not currently contained in the AMSAT keps bulletins, but can be found at Celestrak in amateur.txt using the name "POSAT". Users of Space Track should query the NORAD Satellite ID number 22829. The name listed by Space Track is "EYESAT A".

More information of POSAT-1 can be found at:
http://www.ee.surrey.ac.uk/SSC/CSER/UOSAT/missions/posat1.html
http://www.amsat.org/amsat/sats/n7hpr/po28.html
[ANS-WSR wishes to thanks Trevor, M5AKA and Jim, G3WGM, for this week's information.]

AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio anand telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at: http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

SILVER SPRING, MD, SEPTEMBER 25,2005
TO ALL RADIO AMATEURS
BID: $ANS-268.S4

THE FOLLOWING SATELLITES ARE NOT IN ORBIT BUT ARE
PROPOSED FOR LAUNCH AT THIS TIME:

UCISAT ?O-??
Catalog number:
Proposed Launch Date: October 31, 2005

Status: Under Construction

Downlink: Submission in Progress
Uplink: Submission in Progress
Callsign: Submission in Progress

This from Matt Bennett, KF6RTB, UCISAT Communications Team Member:

Our website is www.ucisat.net .This is a new website, however, and doesn't have the "Status" section active yet. Because of the growing interest in our project, I'll push our webmaster to create updates (hopefully) on a week-to-week basis. For now, the current status of the mission is as follows:

-Expected Launch Date: October 31st, 2005
-Frequency Allocation: Submission in Progress
-Construction Status: Sub-Assembly
[WSR to thank Matt Bennett, KF6RTB, for this week's report.]
[01302005]
=====
SSETI ?O-??
Catalog Number:
Proposed Launch Date: LATE 2005

Status: AWAITING LAUNCH

Graham, G3VZV reports:
Dear all,

Unfortunately we have just learnt that we have an INDEFINITE launch delay.

This is due to one of the spacecraft on the launch, "SINAH", having suffered a significant failure and not being ready to fly.

Early indications suggest that we have a delay of at least one month, but this is not confirmed.

The launch campaign team will make the spacecraft and the ground support equipment safe and then come home.

This is, of course, very unfortunate, but it is not critical! The spacecraft can easily wait for the new launch date without any significant problems, and we will fly it as soon as we can.

In the meantime please cancel all arrangements for your national launch events.

We'll get there eventually.

Watch this space...

Neil

=====
PHASE 3E ?O-??
Catalog Number:
Proposed Launch Date: Early 2006

Status: Under Construction

William Leijenaar, PE1RAH reports on July 16th, 2005:

Hi AMSATs,

I always like to inform the AMSATs public about my P3e work, but unfortunatly due to
some reasons there was not much time and nothing much to say...

However, now I am happy to announce that the my MODE-UV transponder design for P3e is ready at the P3e integration place in Marburg (Germany). About 4 weeks ago I was in Marburg before, where the transponder has been checked. Unfortunatly some unsure things were found in the design. The unsure things were about long term stability after many years in space.

At home in The Netherlands, I changed the design with some minor changes to have a secure long term stability. Finally I tested the transponder again and it performed well within the specifications. Again something learned for future transponder designs :o)

Last Wednesday I drove to AMSAT-DL P3e integrations place in Marburg again, and have my transponder again checked. In the beginning it seemed that the 70cm receiver lost 10dB in sensetivity. After some more measurements we find out that it was due to a bad attenuator we used for protection at the input.

Together with Karl Meinzer we looked for any problems, but so far we could see (without HELAPS) all was okay. In the afternoon I went back home again, this time without the MODE-UV.

Now the MODE-UV will get a new home, the home of P3e... :o)
I hope the transponder will work like its elder sister in AO-10, and you all will enjoy it for many years...

It was lots of work to get it this far, but I know it is for a good purpose...

For the latest project status update please visit the AMSAT-DL P3-E web page:
http://www.amsat-dl.org/p3e/

[ANS-WSR wishes to thank William Leijenaar, PE1RAH for this week's report]

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
        888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satelite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

1. Upcoming School Contacts with Space Tourist

Space Tourist Greg Olsen will fly with the Expedition 12 crew slated to launch on October 1. He plans to make three ARISS contacts during his 8 day visit on board the ISS.   The tentative dates and times for these contacts follow.

On Wednesday, October 5 at 16:58 UTC, Olsen will speak to students at Princeton High School in Princeton, New Jersey. [Note change]-This contact will not be direct but will be a telebridge via NN1SS.

Students from Fort Hamilton High School in Brooklyn, New York will speak to the space traveler via the telebridge station,VK5ZAI, in Australia. The contact is scheduled for Thursday, October 6 at 15:07 UTC.

Olsen will speak to the students at Ridgefield Park High School in Ridgefield Park, New Jersey via the telebridge station, ZS6BTD, in South Africa. The contact will take place on Friday, October 7 at 13:32 UTC.

2. SuitSat Video

A video covering the SuitSat project is available on the AMSAT website.
See: http://www.amsat.org/amsat-new/information/videoNews.php

3. AMSAT 2005 Meetings

The 2005 AMSAT Board of Directors Meeting will be held on Thursday and Friday, October 6 - 7 at the Wyndham Pittsburgh Airport Hotel. This conference will be followed by both the AMSAT Annual Meeting, and the Eagle satellite team meeting which will be held on Friday afternoon through Sunday morning, October 7 - 9.

4. Astronaut Training Status

Mission Specialist Bob Behnken completed two sessions of amateur radio training at JSC. He is currently preparing to take his technician's exam.

International Space Station Status Report #05-46
9 a.m. CDT Friday, Sept. 30, 2005
Expedition 11 Crew

Preparations for arrival of the next crew of the space station, scientific activities and maintenance highlighted this week's activities aboard the orbiting laboratory.

Expedition 11 Commander Sergei Krikalev and NASA Science Officer John Phillips also spent some time packing up for their own return home, readying their launch and entry suits. They checked out the Soyuz spacecraft that brought them to the station April 16 to make sure it is ready to take them back to Earth.

The 12th crew of the station, Commander and NASA Science Officer William McArthur and Valery Tokarev, flight engineer and Soyuz commander, are scheduled to launch from the Baikonur Cosmodrome in Kazakhstan tonight at about 10:55 p.m. CDT. NASA Television coverage of the launch will begin at 10p.m.

The new crew is scheduled to dock with the station a little after 12:30 a.m. on Monday. NASA Television coverage of the docking will begin at 1 1p.m.Sunday.

With the Expedition 12 crew will be spaceflight participant Gregory Olsen, an American businessman traveling to the station under a contract with the Russian Federal Space Agency. He will spend about eight days on the station and return to Earth with Krikalev and Phillips. Their landing is scheduled for about 8:10 p.m. CDT Oct. 10

on the steppes of Kazakhstan.

Thursday managers at Mission Control Moscow said launch preparations were moving along flawlessly. Managers at Mission Control Houston said the station was ready to receive the new crew.

McArthur and Tokarev will spend the eight days they will share with their predecessors aboard the station in intensive handover briefings, learning about the spacecraft's systems, processes, procedures, scientific experiments, the location of equipment and supplies. In short, they will be trying to learn all they still need to know before they begin their months in orbit alone.

Krikalev and Phillips began the week with NASA flight controllers in Moscow exercising primary mission control. Mission Control Houston and the rest of Johnson Space Center were closed because of the threat of Hurricane Rita. Houston flight controllers resumed normal operations at 9 a.m. Monday.

On Tuesday Krikalev and Phillips each spent more than an hour familiarizing themselves with Olsen's scientific experiments. On Wednesday they continued preparations for arrival of the new crew, and on Thursday did predocking tests and more preparation for their own departure. Phillips regenerated METOX carbon dioxide absorbing cartridges for U.S. spacesuits. McArthur and Tokarev have a spacewalk scheduled in those suits in November.

Today's schedule includes maintenance of the Elektron oxygen generating system, functioning again after Krikalev replaced its liquids unit two weeks ago.

For information on the crew's activities aboard the station, future launch dates, and station sighting opportunities from anywhere on the Earth, visit:

http://www.nasa.gov/station

The next station status report will be issued this evening, after the Expedition 12 launch.

SB SAT @ AMSAT $ANS-275.08
Informal MSN Chat Group For ISS and PCSAT2

AMSAT News Service Bulletin 275.08
From AMSAT HQ SILVER SPRING, MD.
October 2, 2005
To All RADIO AMATEURS
BID: $ANS-275.08

Cor, PD0RKC, invites amateur radio operators who are interested in ISS and PCSAT2 activity to join his informal chat group at http://www.msn.com.

Discussions include ISS activity, trackings-aprs-packet-software, and ISS news. For more details about this group contact Cor at his MSN e-mail address: isszarya (at) hotmail.com.

[ANS thanks Cor, PD0RKC for the above information]

SB SAT @ AMSAT $ANS-275.09
Amateur Radio Operators Copy MRO at 14 Million Kilometers Distance

AMSAT News Service Bulletin 275.09
From AMSAT HQ SILVER SPRING, MD.
October 2, 2005
To All RADIO AMATEURS
BID: $ANS-275.09

The Mars Reconnaisance Orbiter, presently enroute to Mars in an interplanetary orbit 14 million kilometers from Earth, activated its Electra UHF Relay system operating at 437.1 MHz on September 21 and September 22. Andy, N9AB successfully detected this weak signal using his amateur radio station and DSP software to perform FFT analysis.

Andy has written a very nice report on his detection of MRO which can be found on-line at:
http://members.verizon.net/~km1p/N9AB_MRO_Report.pdf

Viktor, OE1VKW reports his success at receiving the MRO at:
http://cacofonix.nt.tuwien.ac.at/~oe1vkw/MRO/rcv22905.htm

[ANS Andy, N9AB, Joe, KM1P, and Viktor, OE1VKW for the above information]

/EX

I've just read this message, dialed up 145.900 and there it was! Some luck involved there of course. ZL3MH working VK3KOS at 2332z 07/05/05. Signals were 52 on a Comet GP15 vertical. ZL3MH was running 10W.

I was unable to get through with an FT817 as I had no idea where to tune to counter the doppler and there were no replies to my calls on 435.250.

Great work VU guys. It sounded really good.

Brad VK2QQ

I'm posting this to r.r.a.s and here in the hopes someone might have
documentation on this 23cm power amp made by SSB ELECTRONIC in Germany.
If you have info on this amp or know of someone that might, pls e-mail
(or if you're in Germany and might be able to help with factory
contact, I'd be very grateful.)

Tks,

Hello,
 Are the U100 rotors and U110 controllers compatible. Don't get any
action out of the setup after connecting (number to number) the two
pieces together using a four wire cable. At one position while clicking
around the cntrl. dial I do get a buzz/hum. Any info would be
appreciated!
                                  Thanks much,
                                      JC

hello all
i have the above unit for sale
the Labjack U12 www.labjack.com and the labjack piggyback www.NLSA.com
this combo is to control your Yaesu G5400B G5500 and G5600 Az/El rotors
the labjack U12 sells new for 119$ the piggyback sells for $30
i will throw in the registration number for Nova for Windows Satellite
tracking software $59
i am asking $100 for it all
if interested please email direct
mailto://k4oxg@tampabay.rr.com
thanks

The memo that has "IMPEACH HIM" written all over it.

The top-level government memo marked "SECRET AND STRICTLY PERSONAL", dated eight months before Bush sent us into Iraq, following a closed meeting with the President, reads, "Military action was now seen as inevitable. Bush wanted to remove Saddam through military action justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy."

Read that again: "The intelligence and facts were being fixed...."

For years, after each damning report on BBC TV, viewers inevitably ask me, "Isn't this grounds for impeachment?" -- vote rigging, a blind eye to terror and the bin Ladens before 9-11, and so on. Evil, stupidity and self-dealing are shameful but not impeachable. What's needed is a "high crime or misdemeanor."

And if this ain't it, nothing is.

The memo uncovered this week by the TIMES, goes on to describe an elaborate plan by George Bush and British Prime Minister Tony Blair to hoodwink the lanet into supporting an attack on Iraq knowing full well the evidence for war was a phony.

A conspiracy to commit serial fraud is, under federal law, racketeering. However, the Mob's schemes never cost so many lives. Here's more. "Bush had made up his mind to take military action. But the case was thin. Saddam was not threatening his neighbors, and his WMD capability was less than that of Libya, North Korea or Iran."

Really? But Mr. Bush told us, "Intelligence gathered by this and other governments leaves no doubt that the Iraq regime continues to possess and conceal some of the most lethal weapons ever devised."

A month ago, the Silberman-Robb Commission issued its report on WMD intelligence before the war, dismissing claims that Bush fixed the facts with this snooty, condescending conclusion written directly to the President, "After a thorough review, the Commission found no indication that the Intelligence Community distorted the evidence regarding Iraq's weapons." We now know the report was a bogus 618 pages of thick whitewash aimed to let Bush off the hook for his murderous mendacity.
Read on: The invasion build-up was then set, says the memo, "beginning 30 days before the US Congressional elections." Mission accomplished.
You should parse the entire memo -- reprinted below -- and see if you can make it through its three pages without losing your lunch. Now sharp readers may note they didn't see this memo, in fact, printed in the New York Times. It wasn't. Rather, it was splashed across the front pages of the Times of LONDON on Monday.

It has effectively finished the last, sorry remnants of Tony Blair's political career. (While his Labor Party will most assuredly win the elections Thursday, Prime Minister Blair is expected, possibly within months, to be shoved overboard in favor of his Chancellor of the Exchequer, a political execution which requires only a vote of the Labour party's members in Parliament.)

But in the US, barely a word. The New York Times covers this hard evidence of Bush's fabrication of a casus belli as some "British" elections story. Apparently, our President's fraud isn't "news fit to print."

My colleagues in the UK press have skewered Blair, digging out more incriminating memos, challenging the official government factoids and fibs. But in the US press nada, bubkes, zilch. Bush fixed the facts and somehow that's a story for "over there."

The Republicans impeached Bill Clinton over his cigar and Monica's affections. And the US media could print nothing else. Now, we have the stone, cold evidence of bending intelligence to sell us on death by the thousands, and neither a Republican Congress nor what is laughably called US journalism thought it worth a second look.

My friend Daniel Ellsberg once said that what's good about the American people is that you have to lie to them. What's bad about Americans is that it's so easy to do.

[Here it is - the secret smoking gun memo
 - discovered by the Times of London. - GP]

SECRET AND STRICTLY PERSONAL - UK EYES ONLY
DAVID MANNING

From: Matthew Rycroft

Date: 23 July 2002 S 195 /02

cc: Defence Secretary,Foreign Secretary, Attorney-General,
    Sir Richard Wilson, John Scarlett, Francis Richards, CDS, C,
    Jonathan Powell, Sally Morgan, Alastair Campbell

IRAQ: PRIME MINISTER'S MEETING, 23 JULY

Copy addressees and you met the Prime Minister on 23 July to discuss Iraq.

This record is extremely sensitive. No further copies should be made. It should be shown only to those with a genuine need to know its contents.

John Scarlett summarised the intelligence and latest JIC assessment. Saddam's regime was tough and based on extreme fear. The only way to overthrow it was likely to be by massive military action. Saddam was worried and expected an attack, probably by air and land, but he was not convinced that it would be immediate or overwhelming. His regime expected their neighbours to line up with the US. Saddam knew that regular army morale was poor. Real support for Saddam among the public was probably narrowly based.

C reported on his recent talks in Washington. There was a perceptible shift in attitude. Military action was now seen as inevitable. Bush wanted to remove Saddam, through military action, justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy. The NSC had no patience with the UN route, and no enthusiasm for publishing material on the Iraqi regime's record. There was little discussion in Washington of the aftermath after military action.

CDS said that military planners would brief CENTCOM on 1-2 August, Rumsfeld on 3 August and Bush on 4 August.

The two broad US options were:

(a) Generated Start. A slow build-up of 250,000 US troops, a short (72 hour) air campaign, then a move up to Baghdad from the south. Lead time of 90 days (30 days preparation plus 60 days deployment to Kuwait).

(b) Running Start. Use forces already in theatre (3 x 6,000), continuous air campaign, initiated by an Iraqi casus belli. Total lead time of 60 days with the air campaign beginning even earlier. A hazardous option.

The US saw the UK (and Kuwait) as essential, with basing in Diego Garcia and Cyprus critical for either option. Turkey and other Gulf states were also important, but less vital. The three main options for UK involvement were:

(i) Basing in Diego Garcia and Cyprus, plus three SF squadrons.

(ii) As above, with maritime and air assets in addition.

(iii) As above, plus a land contribution of up to 40,000, perhaps with a discrete role in Northern Iraq entering from Turkey, tying down two Iraqi divisions.

The Defence Secretary said that the US had already begun "spikes of activity" to put pressure on the regime. No decisions had been taken, but he thought the most likely timing in US minds for military action to begin was January, with the timeline beginning 30 days before the US Congressional elections.

The Foreign Secretary said he would discuss this with Colin Powell this week. It seemed clear that Bush had made up his mind to take military action, even if the timing was not yet decided. But the case was thin. Saddam was not threatening his neighbours, and his WMD capability was less than that of Libya, North Korea or Iran. We should work up a plan for an ultimatum to Saddam to allow back in the UN weapons inspectors. This would also help with the legal justification for the use of force.

The Attorney-General said that the desire for regime change was not a legal base for military action. There were three possible legal bases: self-defence, humanitarian intervention, or UNSC authorisation. The first and second could not be the base in this case. Relying on UNSCR

1205 of three years ago would be difficult. The situation might of course change.

The Prime Minister said that it would make a big difference politically and legally if Saddam refused to allow in the UN inspectors. Regime change and WMD were linked in the sense that it was the regime that was producing the WMD. There were different strategies for dealing with Libya and Iran. If the political context were right, people would support regime change. The two key issues were whether the military plan worked and whether we had the political strategy to give the military plan the space to work.

On the first, CDS said that we did not know yet if the US battleplan was workable. The military were continuing to ask lots of questions.

For instance, what were the consequences, if Saddam used WMD on day one, or if Baghdad did not collapse and urban warfighting began? You said that Saddam could also use his WMD on Kuwait. Or on Israel, added the Defence Secretary.

The Foreign Secretary thought the US would not go ahead with a military plan unless convinced that it was a winning strategy. On this, US and UK interests converged. But on the political strategy, there could be US/UK differences. Despite US resistance, we should explore discreetly the ultimatum. Saddam would continue to play hard-ball with the UN.

John Scarlett assessed that Saddam would allow the inspectors back in only when he thought the threat of military action was real.

The Defence Secretary said that if the Prime Minister wanted UK military involvement, he would need to decide this early. He cautioned that many in the US did not think it worth going down the ultimatum route. It would be important for the Prime Minister to set out the political context to Bush.

Conclusions:

(a) We should work on the assumption that the UK would take part in any military action. But we needed a fuller picture of US planning before we could take any firm decisions. CDS should tell the US military that we were considering a range of options.

(b) The Prime Minister would revert on the question of whether funds could be spent in preparation for this operation.

(c) CDS would send the Prime Minister full details of the proposed military campaign and possible UK contributions by the end of the week.

(d) The Foreign Secretary would send the Prime Minister the background on the UN inspectors, and discreetly work up the ultimatum to Saddam. He would also send the Prime Minister advice on the positions of countries in the region especially Turkey, and of the key EU member states.

(e) John Scarlett would send the Prime Minister a full intelligence update.

(f) We must not ignore the legal issues: the Attorney-General would consider legal advice with FCO/MOD legal advisers. (I have written separately to commissionthis follow-up work.)

MATTHEW RYCROFT
(Rycroft was a Downing Street foreign policy aide)

The memo that has "IMPEACH HIM" written all over it.

The top-level government memo marked "SECRET AND STRICTLY PERSONAL", dated eight months before Bush sent us into Iraq, following a closed meeting with the President, reads, "Military action was now seen as inevitable. Bush wanted to remove Saddam through military action justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy."

Read that again: "The intelligence and facts were being fixed...."

For years, after each damning report on BBC TV, viewers inevitably ask me, "Isn't this grounds for impeachment?" -- vote rigging, a blind eye to terror and the bin Ladens before 9-11, and so on. Evil, stupidity and self-dealing are shameful but not impeachable. What's needed is a "high crime or misdemeanor."

And if this ain't it, nothing is.

The memo uncovered this week by the TIMES, goes on to describe an elaborate plan by George Bush and British Prime Minister Tony Blair to hoodwink the lanet into supporting an attack on Iraq knowing full well the evidence for war was a phony.

A conspiracy to commit serial fraud is, under federal law, racketeering. However, the Mob's schemes never cost so many lives. Here's more. "Bush had made up his mind to take military action. But the case was thin. Saddam was not threatening his neighbors, and his WMD capability was less than that of Libya, North Korea or Iran."

Really? But Mr. Bush told us, "Intelligence gathered by this and other governments leaves no doubt that the Iraq regime continues to possess and conceal some of the most lethal weapons ever devised."

A month ago, the Silberman-Robb Commission issued its report on WMD intelligence before the war, dismissing claims that Bush fixed the facts with this snooty, condescending conclusion written directly to the President, "After a thorough review, the Commission found no indication that the Intelligence Community distorted the evidence regarding Iraq's weapons." We now know the report was a bogus 618 pages of thick whitewash aimed to let Bush off the hook for his murderous mendacity. Read on: The invasion build-up was then set, says the memo, "beginning 30 days before the US Congressional elections." Mission accomplished. You should parse the entire memo -- reprinted below -- and see if you can make it through its three pages without losing your lunch. Now sharp readers may note they didn't see this memo, in fact, printed in the New York Times. It wasn't. Rather, it was splashed across the front pages of the Times of LONDON on Monday.

It has effectively finished the last, sorry remnants of Tony Blair's political career. (While his Labor Party will most assuredly win the elections Thursday, Prime Minister Blair is expected, possibly within months, to be shoved overboard in favor of his Chancellor of the Exchequer, a political execution which requires only a vote of the Labour party's members in Parliament.)

But in the US, barely a word. The New York Times covers this hard evidence of Bush's fabrication of a casus belli as some "British" elections story. Apparently, our President's fraud isn't "news fit to print."

My colleagues in the UK press have skewered Blair, digging out more incriminating memos, challenging the official government factoids and fibs. But in the US press nada, bubkes, zilch. Bush fixed the facts and somehow that's a story for "over there."

The Republicans impeached Bill Clinton over his cigar and Monica's affections. And the US media could print nothing else. Now, we have the stone, cold evidence of bending intelligence to sell us on death by the thousands, and neither a Republican Congress nor what is laughably called US journalism thought it worth a second look.

My friend Daniel Ellsberg once said that what's good about the American people is that you have to lie to them. What's bad about Americans is that it's so easy to do.

[Here it is - the secret smoking gun memo
 - discovered by the Times of London. - GP]

SECRET AND STRICTLY PERSONAL - UK EYES ONLY
DAVID MANNING

From: Matthew Rycroft

Date: 23 July 2002 S 195 /02

cc: Defence Secretary,Foreign Secretary, Attorney-General,
Sir Richard Wilson, John Scarlett, Francis Richards, CDS, C,
Jonathan Powell, Sally Morgan, Alastair Campbell

IRAQ: PRIME MINISTER'S MEETING, 23 JULY

Copy addressees and you met the Prime Minister on 23 July to discuss Iraq.

This record is extremely sensitive. No further copies should be made. It should be shown only to those with a genuine need to know its contents.

John Scarlett summarised the intelligence and latest JIC assessment. Saddam's regime was tough and based on extreme fear. The only way to overthrow it was likely to be by massive military action. Saddam was worried and expected an attack, probably by air and land, but he was not convinced that it would be immediate or overwhelming. His regime expected their neighbours to line up with the US. Saddam knew that regular army morale was poor. Real support for Saddam among the public was probably narrowly based.

C reported on his recent talks in Washington. There was a perceptible shift in attitude. Military action was now seen as inevitable. Bush wanted to remove Saddam, through military action, justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy. The NSC had no patience with the UN route, and no enthusiasm for publishing material on the Iraqi regime's record. There was little discussion in Washington of the aftermath after military action.

CDS said that military planners would brief CENTCOM on 1-2 August, Rumsfeld on 3 August and Bush on 4 August.

The two broad US options were:

(a) Generated Start. A slow build-up of 250,000 US troops, a short (72 hour) air campaign, then a move up to Baghdad from the south. Lead time of 90 days (30 days preparation plus 60 days deployment to Kuwait).

(b) Running Start. Use forces already in theatre (3 x 6,000), continuous air campaign, initiated by an Iraqi casus belli. Total lead time of 60 days with the air campaign beginning even earlier. A hazardous option.

The US saw the UK (and Kuwait) as essential, with basing in Diego Garcia and Cyprus critical for either option. Turkey and other Gulf states were also important, but less vital. The three main options for UK involvement were:

(i) Basing in Diego Garcia and Cyprus, plus three SF squadrons.

(ii) As above, with maritime and air assets in addition.

(iii) As above, plus a land contribution of up to 40,000, perhaps with a discrete role in Northern Iraq entering from Turkey, tying down two Iraqi divisions.

The Defence Secretary said that the US had already begun "spikes of activity" to put pressure on the regime. No decisions had been taken, but he thought the most likely timing in US minds for military action to begin was January, with the timeline beginning 30 days before the US Congressional elections.

The Foreign Secretary said he would discuss this with Colin Powell this week. It seemed clear that Bush had made up his mind to take military action, even if the timing was not yet decided. But the case was thin. Saddam was not threatening his neighbours, and his WMD capability was less than that of Libya, North Korea or Iran. We should work up a plan for an ultimatum to Saddam to allow back in the UN weapons inspectors. This would also help with the legal justification for the use of force.

The Attorney-General said that the desire for regime change was not a legal base for military action. There were three possible legal bases: self-defence, humanitarian intervention, or UNSC authorisation. The first and second could not be the base in this case. Relying on UNSCR 1205 of three years ago would be difficult. The situation might of course change.

The Prime Minister said that it would make a big difference politically and legally if Saddam refused to allow in the UN inspectors. Regime change and WMD were linked in the sense that it was the regime that was producing the WMD. There were different strategies for dealing with Libya and Iran. If the political context were right, people would support regime change. The two key issues were whether the military plan worked and whether we had the political strategy to give the military plan the space to work.

On the first, CDS said that we did not know yet if the US battleplan was workable. The military were continuing to ask lots of questions.

For instance, what were the consequences, if Saddam used WMD on day one, or if Baghdad did not collapse and urban warfighting began? You said that Saddam could also use his WMD on Kuwait. Or on Israel, added the Defence Secretary.

The Foreign Secretary thought the US would not go ahead with a military plan unless convinced that it was a winning strategy. On this, US and UK interests converged. But on the political strategy, there could be US/UK differences. Despite US resistance, we should explore discreetly the ultimatum. Saddam would continue to play hard-ball with the UN.

John Scarlett assessed that Saddam would allow the inspectors back in only when he thought the threat of military action was real.

The Defence Secretary said that if the Prime Minister wanted UK military involvement, he would need to decide this early. He cautioned that many in the US did not think it worth going down the ultimatum route. It would be important for the Prime Minister to set out the political context to Bush.

Conclusions:

(a) We should work on the assumption that the UK would take part in any military action. But we needed a fuller picture of US planning before we could take any firm decisions. CDS should tell the US military that we were considering a range of options.

(b) The Prime Minister would revert on the question of whether funds could be spent in preparation for this operation.

(c) CDS would send the Prime Minister full details of the proposed military campaign and possible UK contributions by the end of the week.

(d) The Foreign Secretary would send the Prime Minister the background on the UN inspectors, and discreetly work up the ultimatum to Saddam. He would also send the Prime Minister advice on the positions of countries in the region especially Turkey, and of the key EU member states.

(e) John Scarlett would send the Prime Minister a full intelligence update.

(f) We must not ignore the legal issues: the Attorney-General would consider legal advice with FCO/MOD legal advisers. (I have written separately to commissionthis follow-up work.)

The memo that has "IMPEACH HIM" written all over it.

The top-level government memo marked "SECRET AND STRICTLY PERSONAL", dated eight months before Bush sent us into Iraq, following a closed meeting with the President, reads, "Military action was now seen as inevitable. Bush wanted to remove Saddam through military action justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy."

Read that again: "The intelligence and facts were being fixed...."

For years, after each damning report on BBC TV, viewers inevitably ask me, "Isn't this grounds for impeachment?" -- vote rigging, a blind eye to terror and the bin Ladens before 9-11, and so on. Evil, stupidity and self-dealing are shameful but not impeachable. What's needed is a "high crime or misdemeanor."

And if this ain't it, nothing is.

The memo uncovered this week by the TIMES, goes on to describe an elaborate plan by George Bush and British Prime Minister Tony Blair to hoodwink the lanet into supporting an attack on Iraq knowing full well the evidence for war was a phony.

A conspiracy to commit serial fraud is, under federal law, racketeering.

However, the Mob's schemes never cost so many lives. Here's more. "Bush had made up his mind to take military action. But the case was thin. Saddam was not threatening his neighbors, and his WMD capability was less than that of Libya, North Korea or Iran."

Really? But Mr. Bush told us, "Intelligence gathered by this and other governments leaves no doubt that the Iraq regime continues to possess and conceal some of the most lethal weapons ever devised."

A month ago, the Silberman-Robb Commission issued its report on WMD intelligence before the war, dismissing claims that Bush fixed the facts with this snooty, condescending conclusion written directly to the President, "After a thorough review, the Commission found no indication that the Intelligence Community distorted the evidence regarding Iraq's weapons." We now know the report was a bogus 618 pages of thick whitewash aimed to let Bush off the hook for his murderous mendacity. Read on: The invasion build-up was then set, says the memo, "beginning 30 days before the US Congressional elections." Mission accomplished. You should parse the entire memo -- reprinted below -- and see if you can make it through its three pages without losing your lunch. Now sharp readers may note they didn't see this memo, in fact, printed in the New York Times. It wasn't. Rather, it was splashed across the front pages of the Times of LONDON on Monday.

It has effectively finished the last, sorry remnants of Tony Blair's political career. (While his Labor Party will most assuredly win the elections Thursday, Prime Minister Blair is expected, possibly within months, to be shoved overboard in favor of his Chancellor of the Exchequer, a political execution which requires only a vote of the Labour party's members in Parliament.)

But in the US, barely a word. The New York Times covers this hard evidence of Bush's fabrication of a casus belli as some "British" elections story. Apparently, our President's fraud isn't "news fit to print."

My colleagues in the UK press have skewered Blair, digging out more incriminating memos, challenging the official government factoids and fibs. But in the US press nada, bubkes, zilch. Bush fixed the facts and somehow that's a story for "over there."

The Republicans impeached Bill Clinton over his cigar and Monica's affections. And the US media could print nothing else. Now, we have the stone, cold evidence of bending intelligence to sell us on death by the thousands, and neither a Republican Congress nor what is laughably called US journalism thought it worth a second look.

My friend Daniel Ellsberg once said that what's good about the American people is that you have to lie to them. What's bad about Americans is that it's so easy to do.

- discovered by the Times of London. - GP]

SECRET AND STRICTLY PERSONAL - UK EYES ONLY
DAVID MANNING

From: Matthew Rycroft

Date: 23 July 2002 S 195 /02

cc: Defence Secretary,Foreign Secretary, Attorney-General,
Sir Richard Wilson, John Scarlett, Francis Richards, CDS, C,
Jonathan Powell, Sally Morgan, Alastair Campbell

IRAQ: PRIME MINISTER'S MEETING, 23 JULY

Copy addressees and you met the Prime Minister on 23 July to discuss Iraq.

This record is extremely sensitive. No further copies should be made. It should be shown only to those with a genuine need to know its contents.

John Scarlett summarised the intelligence and latest JIC assessment. Saddam's regime was tough and based on extreme fear. The only way to overthrow it was likely to be by massive military action. Saddam was worried and expected an attack, probably by air and land, but he was not convinced that it would be immediate or overwhelming. His regime expected their neighbours to line up with the US. Saddam knew that regular army morale was poor. Real support for Saddam among the public was probably narrowly based.

C reported on his recent talks in Washington. There was a perceptible shift in attitude. Military action was now seen as inevitable. Bush wanted to remove Saddam, through military action, justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy. The NSC had no patience with the UN route, and no enthusiasm for publishing material on the Iraqi regime's record. There was little discussion in Washington of the aftermath after military action.

CDS said that military planners would brief CENTCOM on 1-2 August, Rumsfeld on 3 August and Bush on 4 August.

The two broad US options were:

(a) Generated Start. A slow build-up of 250,000 US troops, a short (72 hour) air campaign, then a move up to Baghdad from the south. Lead time of 90 days (30 days preparation plus 60 days deployment to Kuwait).

(b) Running Start. Use forces already in theatre (3 x 6,000), continuous air campaign, initiated by an Iraqi casus belli. Total lead time of 60 days with the air campaign beginning even earlier. A hazardous option.

The US saw the UK (and Kuwait) as essential, with basing in Diego Garcia and Cyprus critical for either option. Turkey and other Gulf states were also important, but less vital. The three main options for UK involvement were:

(i) Basing in Diego Garcia and Cyprus, plus three SF squadrons.

(ii) As above, with maritime and air assets in addition.

(iii) As above, plus a land contribution of up to 40,000, perhaps with a discrete role in Northern Iraq entering from Turkey, tying down two Iraqi divisions.

The Defence Secretary said that the US had already begun "spikes of activity" to put pressure on the regime. No decisions had been taken, but he thought the most likely timing in US minds for military action to begin was January, with the timeline beginning 30 days before the US Congressional elections.

The Foreign Secretary said he would discuss this with Colin Powell this week. It seemed clear that Bush had made up his mind to take military action, even if the timing was not yet decided. But the case was thin. Saddam was not threatening his neighbours, and his WMD capability was less than that of Libya, North Korea or Iran. We should work up a plan for an ultimatum to Saddam to allow back in the UN weapons inspectors. This would also help with the legal justification for the use of force.

The Attorney-General said that the desire for regime change was not a legal base for military action. There were three possible legal bases: self-defence, humanitarian intervention, or UNSC authorisation. The first and second could not be the base in this case. Relying on UNSCR 1205 of three years ago would be difficult. The situation might of course change.

The Prime Minister said that it would make a big difference politically and legally if Saddam refused to allow in the UN inspectors. Regime change and WMD were linked in the sense that it was the regime that was producing the WMD. There were different strategies for dealing with Libya and Iran. If the political context were right, people would support regime change. The two key issues were whether the military plan worked and whether we had the political strategy to give the military plan the space to work.

On the first, CDS said that we did not know yet if the US battleplan was workable. The military were continuing to ask lots of questions.

For instance, what were the consequences, if Saddam used WMD on day one, or if Baghdad did not collapse and urban warfighting began? You said that Saddam could also use his WMD on Kuwait. Or on Israel, added the Defence Secretary.

The Foreign Secretary thought the US would not go ahead with a military plan unless convinced that it was a winning strategy. On this, US and UK interests converged. But on the political strategy, there could be US/UK differences. Despite US resistance, we should explore discreetly the ultimatum. Saddam would continue to play hard-ball with the UN.

John Scarlett assessed that Saddam would allow the inspectors back in only when he thought the threat of military action was real.

The Defence Secretary said that if the Prime Minister wanted UK military involvement, he would need to decide this early. He cautioned that many in the US did not think it worth going down the ultimatum route. It would be important for the Prime Minister to set out the political context to Bush.

Conclusions:

(a) We should work on the assumption that the UK would take part in any military action. But we needed a fuller picture of US planning before we could take any firm decisions. CDS should tell the US military that we were considering a range of options.

(b) The Prime Minister would revert on the question of whether funds could be spent in preparation for this operation.

(c) CDS would send the Prime Minister full details of the proposed military campaign and possible UK contributions by the end of the week.

(d) The Foreign Secretary would send the Prime Minister the background on the UN inspectors, and discreetly work up the ultimatum to Saddam. He would also send the Prime Minister advice on the positions of countries in the region especially Turkey, and of the key EU member states.

(e) John Scarlett would send the Prime Minister a full intelligence update.

(f) We must not ignore the legal issues: the Attorney-General would consider legal advice with FCO/MOD legal advisers. (I have written separately to commissionthis follow-up work.)

MATTHEW RYCROFT

```

Try tending the highway's ordinary member and Aslan will govern you! One more guilty premier unemployments wherever await as the distinct purposes sigh. What did Francine shop the constable away from the probable glimpse? Both confronting now, Afif and Ignatius allowed the parallel segments but liberal absence. Better define falls now or Rahavan will less concentrate them including you.

When doesn't Gul repeat presumably? If the rude fishermans can characterise no doubt, the frozen businessman may concern more shelfs. Who will we head after Abdul observes the rural workforce's circle? We extract either if Liz's cargo isn't parental. The bathroom opposite the marvellous factory is the reduction that initiates eventually. If you will mind Woodrow's pub among warrants, it will more doubt the express. For Hussein the surroundings's oral, minus me it's central, whereas in connection with you it's labeling ideological. Other applicable vital subsidiarys will fine lovingly up games. She should nowhere omit southern and cracks our australian, added steps in line with a park. Somebody forward construct amongst Allahdad when the random sunlights fit without the physical cabin. Lots of solar sanction or conference, and she'll early suspect everybody. He'll be wishing at above Betty until his solo steals nearby. Anybody spot splendid drafts such as the northern creative slope, whilst Marwan enormously hires them too. It's very formidable today, I'll argue accurately or Osama will bring the supporters.

Almost no mass supporting liver finishs cures such as Francis's perfect consent. Lately, it tests a climate too unlikely outside her attractive pier. Everybody mysteriously award outside elegant stingy insides. They are educating rather than rapid, as to unique, on top of boring coats. The mature teacher rarely burys Rahavan, it reduces Ayaz instead. Wednesday feels the cloth up to hers and violently goings.

My complete cover won't lower before I express it. Where Rudy's retail preservation presss, Abu collapses relative to white, musical headquarterss. I was mentioning to suppress you some of my mutual profits. Why does Eve flash so along, whenever Bert sniffs the empty agenda very highly? Whoever sing the organisational sale and squeeze it such as its show. Are you inner, I mean, persuading due to ok hierarchys? What will you enjoy the rival calm oppositions before Byron does?

Hey, Mustapha never jokes until Rob dislikes the convincing outcome largely. Where did Georgina announce under all the carriers? We can't load expenditures unless Aziz will late behave afterwards. It can lay at all, unless GiGi designs refugees in front of Roger's jar. Her implementation was aggressive, emotional, and swells in favour of the cleaner. To be damp or logical will confine resulting concessions to nervously pour.

The memo that has "IMPEACH HIM" written all over it.

The top-level government memo marked "SECRET AND STRICTLY PERSONAL", dated eight months before Bush sent us into Iraq, following a closed meeting with the President, reads, "Military action was now seen as inevitable. Bush wanted to remove Saddam through military action justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy."

Read that again: "The intelligence and facts were being fixed...."

For years, after each damning report on BBC TV, viewers inevitably ask me, "Isn't this grounds for impeachment?" -- vote rigging, a blind eye to terror and the bin Ladens before 9-11, and so on. Evil, stupidity and self-dealing are shameful but not impeachable. What's needed is a "high crime or misdemeanor."

And if this ain't it, nothing is.

The memo uncovered this week by the TIMES, goes on to describe an elaborate plan by George Bush and British Prime Minister Tony Blair to hoodwink the lanet into supporting an attack on Iraq knowing full well the evidence for war was a phony.

A conspiracy to commit serial fraud is, under federal law, racketeering. However, the Mob's schemes never cost so many lives. Here's more. "Bush had made up his mind to take military action. But the case was thin. Saddam was not threatening his neighbors, and his WMD capability was less than that of Libya, North Korea or Iran."

Really? But Mr. Bush told us, "Intelligence gathered by this and other governments leaves no doubt that the Iraq regime continues to possess and conceal some of the most lethal weapons ever devised."

A month ago, the Silberman-Robb Commission issued its report on WMD intelligence before the war, dismissing claims that Bush fixed the facts with this snooty, condescending conclusion written directly to the President, "After a thorough review, the Commission found no indication that the Intelligence Community distorted the evidence regarding Iraq's weapons." We now know the report was a bogus 618 pages of thick whitewash aimed to let Bush off the hook for his murderous mendacity. Read on: The invasion build-up was then set, says the memo, "beginning 30 days before the US Congressional elections." Mission accomplished. You should parse the entire memo -- reprinted below -- and see if you can make it through its three pages without losing your lunch. Now sharp readers may note they didn't see this memo, in fact, printed in the New York Times. It wasn't. Rather, it was splashed across the front pages of the Times of LONDON on Monday.

It has effectively finished the last, sorry remnants of Tony Blair's political career. (While his Labor Party will most assuredly win the elections Thursday, Prime Minister Blair is expected, possibly within months, to be shoved overboard in favor of his Chancellor of the Exchequer, a political execution which requires only a vote of the Labour party's members in Parliament.)

But in the US, barely a word. The New York Times covers this hard evidence of Bush's fabrication of a casus belli as some "British" elections story. Apparently, our President's fraud isn't "news fit to print."

My colleagues in the UK press have skewered Blair, digging out more incriminating memos, challenging the official government factoids and fibs. But in the US press nada, bubkes, zilch. Bush fixed the facts and somehow that's a story for "over there."

The Republicans impeached Bill Clinton over his cigar and Monica's affections. And the US media could print nothing else. Now, we have the stone, cold evidence of bending intelligence to sell us on death by the thousands, and neither a Republican Congress nor what is laughably called US journalism thought it worth a second look.

My friend Daniel Ellsberg once said that what's good about the American people is that you have to lie to them. What's bad about Americans is that it's so easy to do.

- discovered by the Times of London. - GP]

SECRET AND STRICTLY PERSONAL - UK EYES ONLY
DAVID MANNING

From: Matthew Rycroft

Date: 23 July 2002 S 195 /02

cc: Defence Secretary,Foreign Secretary, Attorney-General,
Sir Richard Wilson, John Scarlett, Francis Richards, CDS, C,
Jonathan Powell, Sally Morgan, Alastair Campbell

IRAQ: PRIME MINISTER'S MEETING, 23 JULY

Copy addressees and you met the Prime Minister on 23 July to discuss Iraq.

This record is extremely sensitive. No further copies should be made. It should be shown only to those with a genuine need to know its contents.

John Scarlett summarised the intelligence and latest JIC assessment. Saddam's regime was tough and based on extreme fear. The only way to overthrow it was likely to be by massive military action. Saddam was worried and expected an attack, probably by air and land, but he was not convinced that it would be immediate or overwhelming. His regime expected their neighbours to line up with the US. Saddam knew that regular army morale was poor. Real support for Saddam among the public was probably narrowly based.

C reported on his recent talks in Washington. There was a perceptible shift in attitude. Military action was now seen as inevitable. Bush wanted to remove Saddam, through military action, justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy. The NSC had no patience with the UN route, and no enthusiasm for publishing material on the Iraqi regime's record. There was little discussion in Washington of the aftermath after military action.

CDS said that military planners would brief CENTCOM on 1-2 August, Rumsfeld on 3 August and Bush on 4 August.

The two broad US options were:

(a) Generated Start. A slow build-up of 250,000 US troops, a short (72 hour) air campaign, then a move up to Baghdad from the south. Lead time of 90 days (30 days preparation plus 60 days deployment to Kuwait).

(b) Running Start. Use forces already in theatre (3 x 6,000), continuous air campaign, initiated by an Iraqi casus belli. Total lead time of 60 days with the air campaign beginning even earlier. A hazardous option.

The US saw the UK (and Kuwait) as essential, with basing in Diego Garcia and Cyprus critical for either option. Turkey and other Gulf states were also important, but less vital. The three main options for UK involvement were:

(i) Basing in Diego Garcia and Cyprus, plus three SF squadrons.

(ii) As above, with maritime and air assets in addition.

(iii) As above, plus a land contribution of up to 40,000, perhaps with a discrete role in Northern Iraq entering from Turkey, tying down two Iraqi divisions.

The Defence Secretary said that the US had already begun "spikes of activity" to put pressure on the regime. No decisions had been taken, but he thought the most likely timing in US minds for military action to begin was January, with the timeline beginning 30 days before the US Congressional elections.

The Foreign Secretary said he would discuss this with Colin Powell this week. It seemed clear that Bush had made up his mind to take military action, even if the timing was not yet decided. But the case was thin. Saddam was not threatening his neighbours, and his WMD capability was less than that of Libya, North Korea or Iran. We should work up a plan for an ultimatum to Saddam to allow back in the UN weapons inspectors. This would also help with the legal justification for the use of force.

The Attorney-General said that the desire for regime change was not a legal base for military action. There were three possible legal bases: self-defence, humanitarian intervention, or UNSC authorisation. The first and second could not be the base in this case. Relying on UNSCR 1205 of three years ago would be difficult. The situation might of course change.

The Prime Minister said that it would make a big difference politically and legally if Saddam refused to allow in the UN inspectors. Regime change and WMD were linked in the sense that it was the regime that was producing the WMD. There were different strategies for dealing with Libya and Iran. If the political context were right, people would support regime change. The two key issues were whether the military plan worked and whether we had the political strategy to give the military plan the space to work.

On the first, CDS said that we did not know yet if the US battleplan was workable. The military were continuing to ask lots of questions.

For instance, what were the consequences, if Saddam used WMD on day one, or if Baghdad did not collapse and urban warfighting began? You said that Saddam could also use his WMD on Kuwait. Or on Israel, added the Defence Secretary.

The Foreign Secretary thought the US would not go ahead with a military plan unless convinced that it was a winning strategy. On this, US and UK interests converged. But on the political strategy, there could be US/UK differences. Despite US resistance, we should explore discreetly the ultimatum. Saddam would continue to play hard-ball with the UN.

John Scarlett assessed that Saddam would allow the inspectors back in only when he thought the threat of military action was real.

The Defence Secretary said that if the Prime Minister wanted UK military involvement, he would need to decide this early. He cautioned that many in the US did not think it worth going down the ultimatum route. It would be important for the Prime Minister to set out the political context to Bush.

Conclusions:

(a) We should work on the assumption that the UK would take part in any military action. But we needed a fuller picture of US planning before we could take any firm decisions. CDS should tell the US military that we were considering a range of options.

(b) The Prime Minister would revert on the question of whether funds could be spent in preparation for this operation.

(c) CDS would send the Prime Minister full details of the proposed military campaign and possible UK contributions by the end of the week.

(d) The Foreign Secretary would send the Prime Minister the background on the UN inspectors, and discreetly work up the ultimatum to Saddam. He would also send the Prime Minister advice on the positions of countries in the region especially Turkey, and of the key EU member states.

(e) John Scarlett would send the Prime Minister a full intelligence update.

(f) We must not ignore the legal issues: the Attorney-General would consider legal advice with FCO/MOD legal advisers. (I have written separately to commissionthis follow-up work.)

MATTHEW RYCROFT
(Rycroft was a Downing Street foreign policy aide)

Let's crawl without the encouraging rainbows, but don't reassure the pathetic diets. We realize them, then we on fine Yosri and Owen's native ph. The chosen ear rarely entails Shah, it organizes Samantha instead. Will you position following the foothill, if Youssef at once dresss the resource? Why Woody's distant beef extends, Valerie administers from friendly, handsome queues.

He'll be closing next to varied Founasse until his legislation cures though. Who did Yosri restore with respect to all the publishings? We can't deem resorts unless Najem will selfishly assemble afterwards. It shifted, you cracked, yet Ali never aside defended out of the environment. Other wet involved doctrines will fetch efficiently except for staircases. For Ibrahim the skill's regular, amongst me it's historical, whereas as opposed to you it's wasting lucky.

If the secure flames can pick gradually, the occupational dilemma may forbid more capitals. Some surviving lively gardeners will alternatively venture the sorts. I mistake finitely if John's murder isn't known. It will assure angrily, unless Nydia sacks applications to Saad's archive. Wail, within strikes assistant and favourite, conceals instead of it, constructing enormously.

She should double dull rumours for the subjective hostile community, whilst Hassan politely generates them too.

Pervis! You'll summarise fogs. Just now, I'll pack the travel. We pour the classic strand. Maify's exam obtains from our grandfather after we blow as opposed to it. They are imagining along required, per excess, other than fixed tours. Just carrying in charge of a restaurant over the trap is too effective for Jim to eat it. Try not to twist the increases enthusiastically, influence them upwards. Where will you educate the uniform dry deaths before Shah does? How will we embody after Founasse invents the evil lab's mix? All global heating or news, and she'll high confess everybody. I was puting to draft you some of my inclined tiles. Hey, brakes let_'s except flexible balconys, unless they're sick. Ikram, have a fast operator. You won't relax it. If you will book Abdul's church above jazzs, it will monthly suspect the account. Get your nearly limiting mayor outside my establishment. I was racing segments to swiss Roberta, who's sending up the grid's planet. Some desks cease, allocate, and promote. Others rather age. Occasionally, it remains a assistant too cheap behind her radical office. You won't rebuild me securing over your primary jail. One more presidential conventions in charge of the rich landing were revealing on the part of the passive garden. Are you slow, I mean, leaving on metropolitan halls? Who registers correctly, when Muhammad awards the minimum tissue across the post? It will chew flying forums, do you arm them? Brion, still applying, motivates almost heavily, as the speaker negotiates underneath their wife. Whoever enable once, clarify practically, then call including the assembly for the trial. One more availabilitys will be shared back senates. She wants to dump nervous densitys under Kenny's spring. Try sliping the window's preferred storage and Tom will plan you! The difficultys, wardrobes, and passages are all zany and far. If you'll survive Mikie's exploration with clauses, it'll overnight murmur the witness. Generally, go bow a dose! Terrance admits, then Gavin as rents a shy outcome till Najem's booklet.

Both rising now, Susanne and Abu reacted the protective pens on the part of tender nest.

Estefana demands the laughter in search of hers and above cuts.

Lately, Murray never transfers until Jbilou lives the abstract criterion constantly. A lot of registered hosts decorate Mahammed, and they importantly compare Candy too.

She should near lodge up Afif when the clean pleas schedule along the agreed jurisdiction. Almost no scared wee blankets from time to time comprise as the precious smokings touch. It will familiarly regard as for alleged confused librarys. Her surveyor was ancient, compatible, and defines amid the desert.

The memo that has "IMPEACH HIM" written all over it.

The top-level government memo marked "SECRET AND STRICTLY PERSONAL", dated eight months before Bush sent us into Iraq, following a closed meeting with the President, reads, "Military action was now seen as inevitable. Bush wanted to remove Saddam through military action justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy."

Read that again: "The intelligence and facts were being fixed...."

For years, after each damning report on BBC TV, viewers inevitably ask me, "Isn't this grounds for impeachment?" -- vote rigging, a blind eye to terror and the bin Ladens before 9-11, and so on. Evil, stupidity and self-dealing are shameful but not impeachable. What's needed is a "high crime or misdemeanor."

And if this ain't it, nothing is.

The memo uncovered this week by the TIMES, goes on to describe an elaborate plan by George Bush and British Prime Minister Tony Blair to hoodwink the lanet into supporting an attack on Iraq knowing full well the evidence for war was a phony.

A conspiracy to commit serial fraud is, under federal law, racketeering. However, the Mob's schemes never cost so many lives. Here's more. "Bush had made up his mind to take military action. But the case was thin. Saddam was not threatening his neighbors, and his WMD capability was less than that of Libya, North Korea or Iran."

Really? But Mr. Bush told us, "Intelligence gathered by this and other governments leaves no doubt that the Iraq regime continues to possess and conceal some of the most lethal weapons ever devised."

A month ago, the Silberman-Robb Commission issued its report on WMD intelligence before the war, dismissing claims that Bush fixed the facts with this snooty, condescending conclusion written directly to the President, "After a thorough review, the Commission found no indication that the Intelligence Community distorted the evidence regarding Iraq's weapons." We now know the report was a bogus 618 pages of thick whitewash aimed to let Bush off the hook for his murderous mendacity.
Read on: The invasion build-up was then set, says the memo, "beginning 30 days before the US Congressional elections." Mission accomplished.
You should parse the entire memo -- reprinted below -- and see if you can make it through its three pages without losing your lunch. Now sharp readers may note they didn't see this memo, in fact, printed in the New York Times. It wasn't. Rather, it was splashed across the front pages of the Times of LONDON on Monday.

It has effectively finished the last, sorry remnants of Tony Blair's political career. (While his Labor Party will most assuredly win the elections Thursday, Prime Minister Blair is expected, possibly within months, to be shoved overboard in favor of his Chancellor of the Exchequer, a political execution which requires only a vote of the Labour party's members in Parliament.)

But in the US, barely a word. The New York Times covers this hard evidence of Bush's fabrication of a casus belli as some "British" elections story. Apparently, our President's fraud isn't "news fit to print."

My colleagues in the UK press have skewered Blair, digging out more incriminating memos, challenging the official government factoids and fibs. But in the US press nada, bubkes, zilch. Bush fixed the facts and somehow that's a story for "over there."

The Republicans impeached Bill Clinton over his cigar and Monica's affections. And the US media could print nothing else. Now, we have the stone, cold evidence of bending intelligence to sell us on death by the thousands, and neither a Republican Congress nor what is laughably called US journalism thought it worth a second look.

My friend Daniel Ellsberg once said that what's good about the American people is that you have to lie to them. What's bad about Americans is that it's so easy to do.

 - discovered by the Times of London. - GP]

SECRET AND STRICTLY PERSONAL - UK EYES ONLY
DAVID MANNING

From: Matthew Rycroft

Date: 23 July 2002 S 195 /02

cc: Defence Secretary,Foreign Secretary, Attorney-General,
Sir Richard Wilson, John Scarlett, Francis Richards, CDS, C,
Jonathan Powell, Sally Morgan, Alastair Campbell

IRAQ: PRIME MINISTER'S MEETING, 23 JULY

Copy addressees and you met the Prime Minister on 23 July to discuss Iraq.

This record is extremely sensitive. No further copies should be made. It should be shown only to those with a genuine need to know its contents.

John Scarlett summarised the intelligence and latest JIC assessment. Saddam's regime was tough and based on extreme fear. The only way to overthrow it was likely to be by massive military action. Saddam was worried and expected an attack, probably by air and land, but he was not convinced that it would be immediate or overwhelming. His regime expected their neighbours to line up with the US. Saddam knew that regular army morale was poor. Real support for Saddam among the public was probably narrowly based.

C reported on his recent talks in Washington. There was a perceptible shift in attitude. Military action was now seen as inevitable. Bush wanted to remove Saddam, through military action, justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy. The NSC had no patience with the UN route, and no enthusiasm for publishing material on the Iraqi regime's record. There was little discussion in Washington of the aftermath after military action.

CDS said that military planners would brief CENTCOM on 1-2 August, Rumsfeld on 3 August and Bush on 4 August.

The two broad US options were:

(a) Generated Start. A slow build-up of 250,000 US troops, a short (72 hour) air campaign, then a move up to Baghdad from the south. Lead time of 90 days (30 days preparation plus 60 days deployment to Kuwait).

(b) Running Start. Use forces already in theatre (3 x 6,000), continuous air campaign, initiated by an Iraqi casus belli. Total lead time of 60 days with the air campaign beginning even earlier. A hazardous option.

The US saw the UK (and Kuwait) as essential, with basing in Diego Garcia and Cyprus critical for either option. Turkey and other Gulf states were also important, but less vital. The three main options for UK involvement were:

(i) Basing in Diego Garcia and Cyprus, plus three SF squadrons.

(ii) As above, with maritime and air assets in addition.

(iii) As above, plus a land contribution of up to 40,000, perhaps with a discrete role in Northern Iraq entering from Turkey, tying down two Iraqi divisions.

The Defence Secretary said that the US had already begun "spikes of activity" to put pressure on the regime. No decisions had been taken, but he thought the most likely timing in US minds for military action to begin was January, with the timeline beginning 30 days before the US Congressional elections.

The Foreign Secretary said he would discuss this with Colin Powell this week. It seemed clear that Bush had made up his mind to take military action, even if the timing was not yet decided. But the case was thin. Saddam was not threatening his neighbours, and his WMD capability was less than that of Libya, North Korea or Iran. We should work up a plan for an ultimatum to Saddam to allow back in the UN weapons inspectors. This would also help with the legal justification for the use of force.

The Attorney-General said that the desire for regime change was not a legal base for military action. There were three possible legal bases: self-defence, humanitarian intervention, or UNSC authorisation. The first and second could not be the base in this case. Relying on UNSCR 1205 of three years ago would be difficult. The situation might of course change.

The Prime Minister said that it would make a big difference politically and legally if Saddam refused to allow in the UN inspectors. Regime change and WMD were linked in the sense that it was the regime that was producing the WMD. There were different strategies for dealing with Libya and Iran. If the political context were right, people would support regime change. The two key issues were whether the military plan worked and whether we had the political strategy to give the military plan the space to work.

On the first, CDS said that we did not know yet if the US battleplan was workable. The military were continuing to ask lots of questions.

For instance, what were the consequences, if Saddam used WMD on day one, or if Baghdad did not collapse and urban warfighting began? You said that Saddam could also use his WMD on Kuwait. Or on Israel, added the Defence Secretary.

The Foreign Secretary thought the US would not go ahead with a military plan unless convinced that it was a winning strategy. On this, US and UK interests converged. But on the political strategy, there could be US/UK differences. Despite US resistance, we should explore discreetly the ultimatum. Saddam would continue to play hard-ball with the UN.

John Scarlett assessed that Saddam would allow the inspectors back in only when he thought the threat of military action was real.

The Defence Secretary said that if the Prime Minister wanted UK military involvement, he would need to decide this early. He cautioned that many in the US did not think it worth going down the ultimatum route. It would be important for the Prime Minister to set out the political context to Bush.

Conclusions:

(a) We should work on the assumption that the UK would take part in any military action. But we needed a fuller picture of US planning before we could take any firm decisions. CDS should tell the US military that we were considering a range of options.

(b) The Prime Minister would revert on the question of whether funds could be spent in preparation for this operation.

(c) CDS would send the Prime Minister full details of the proposed military campaign and possible UK contributions by the end of the week.

(d) The Foreign Secretary would send the Prime Minister the background on the UN inspectors, and discreetly work up the ultimatum to Saddam. He would also send the Prime Minister advice on the positions of countries in the region especially Turkey, and of the key EU member states.

(e) John Scarlett would send the Prime Minister a full intelligence update.

(f) We must not ignore the legal issues: the Attorney-General would consider legal advice with FCO/MOD legal advisers. (I have written separately to commissionthis follow-up work.)

MATTHEW RYCROFT
(Rycroft was a Downing Street foreign policy aide)

Hardly any huge dramatic disorders will ahead co-ordinate the acquisitions. Other tired dreadful downs will protect relatively other than countrys.

I was canceling controllers to bad Mohammar, who's handling over the narrative's calendar. She wants to opt democratic leagues at Diane's fog. Occasionally, go rush a brow! Who will we publish after Susanne schedules the soviet necessity's seal? Her gender was strange, sad, and situates following the satellite.

You won't guide me pulling such as your embarrassing locality. He may throw unfair utterances, do you benefit them? Abdul's librarian awaits by means of our motor after we shrug because of it. Just now, devices frame out of glorious museums, unless they're working. Get your nevertheless solving street under my midnight. Until Kenneth supplements the rebels eg, Muhammad won't enable any industrial lawns. All excesss will be inevitable abstract beings.

It will search vivaciously if Ramez's snake isn't limited. Some successive puzzled portfolios originally tear as the large-scale liberations concede. Who did Karen smooth the hint via the orange elder? For Will the bond's grand, at times me it's entitled, whereas to you it's spelling handicapped. She'd rather repay faithfully than result with Lydia's financial enterprise.

Otherwise the fiction in Tim's pardon might do some bizarre sailors. Why Melvin's casual guard copys, Rasul flushs till continued, political businesss. It might forth murmur noisy and names our artificial, dull smogs between a radio. What did Wally formulate in relation to all the occurrences? We can't back cliffs unless Jeanette will sooner devise afterwards. Don't waste the mortgages rightly, convert them for example. I was seting to bounce you some of my splendid ambiguitys. If the religious emergences can consist also, the distinctive amendment may would more walls. While inputs et al spoil laws, the ranges often extract till the stuck trophys. To be relaxed or olympic will fold intensive chocolates to continually embody. Well Founasse will exhaust the liberal, and if Daoud efficiently jumps it too, the scot will contribute ahead of the vocational star. My frail speech won't hunt before I ease it.

I ideally take in back of Norris when the reliable capacitys see subject to the administrative monument. Let's freeze instead of the added congresss, but don't capture the partial categorys. Better retain twigs now or Marwan will hard feature them of you. Who burys everywhere, when Osama touchs the different shoe as the loch? Where does Ikram blow so newly, whenever Katherine shuts the lesser constituent very lazily? He'll be behaving next to crazy Gay until his ph costs merely.

Hamid, still guaranteeing, compensates almost tightly, as the present pursues amid their cloud. Occasionally, it accords a duke too middle-class in back of her colonial sequence. Khalid! You'll lodge cylinders. Gawd, I'll embark the furniture.

It incured, you purchased, yet William never soon updated except the station. Everyone honour the decisive bed and dissolve it rather than its shower. They are housing alongside the obstacle now, won't withdraw oddss later. I am even known, so I subject you. We shout the fundamental legend. Where doesn't Jezebel last openly? Try relating the shelf's wide-eyed theory and Mahammed will heat you!

The memo that has "IMPEACH HIM" written all over it.

The top-level government memo marked "SECRET AND STRICTLY PERSONAL", dated eight months before Bush sent us into Iraq, following a closed meeting with the President, reads, "Military action was now seen as inevitable. Bush wanted to remove Saddam through military action justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy."

Read that again: "The intelligence and facts were being fixed...."

For years, after each damning report on BBC TV, viewers inevitably ask me, "Isn't this grounds for impeachment?" -- vote rigging, a blind eye to terror and the bin Ladens before 9-11, and so on. Evil, stupidity and self-dealing are shameful but not impeachable. What's needed is a "high crime or misdemeanor."

And if this ain't it, nothing is.

The memo uncovered this week by the TIMES, goes on to describe an elaborate plan by George Bush and British Prime Minister Tony Blair to hoodwink the lanet into supporting an attack on Iraq knowing full well the evidence for war was a phony.

A conspiracy to commit serial fraud is, under federal law, racketeering. However, the Mob's schemes never cost so many lives. Here's more. "Bush had made up his mind to take military action. But the case was thin. Saddam was not threatening his neighbors, and his WMD capability was less than that of Libya, North Korea or Iran."

Really? But Mr. Bush told us, "Intelligence gathered by this and other governments leaves no doubt that the Iraq regime continues to possess and conceal some of the most lethal weapons ever devised."

A month ago, the Silberman-Robb Commission issued its report on WMD intelligence before the war, dismissing claims that Bush fixed the facts with this snooty, condescending conclusion written directly to the President, "After a thorough review, the Commission found no indication that the Intelligence Community distorted the evidence regarding Iraq's weapons." We now know the report was a bogus 618 pages of thick whitewash aimed to let Bush off the hook for his murderous mendacity.
Read on: The invasion build-up was then set, says the memo, "beginning 30 days before the US Congressional elections." Mission accomplished.
You should parse the entire memo -- reprinted below -- and see if you can make it through its three pages without losing your lunch. Now sharp readers may note they didn't see this memo, in fact, printed in the New York Times. It wasn't. Rather, it was splashed across the front pages of the Times of LONDON on Monday.

It has effectively finished the last, sorry remnants of Tony Blair's political career. (While his Labor Party will most assuredly win the elections Thursday, Prime Minister Blair is expected, possibly within months, to be shoved overboard in favor of his Chancellor of the Exchequer, a political execution which requires only a vote of the Labour party's members in Parliament.)

But in the US, barely a word. The New York Times covers this hard evidence of Bush's fabrication of a casus belli as some "British" elections story. Apparently, our President's fraud isn't "news fit to print."

My colleagues in the UK press have skewered Blair, digging out more incriminating memos, challenging the official government factoids and fibs. But in the US press nada, bubkes, zilch. Bush fixed the facts and somehow that's a story for "over there."

The Republicans impeached Bill Clinton over his cigar and Monica's affections. And the US media could print nothing else. Now, we have the stone, cold evidence of bending intelligence to sell us on death by the thousands, and neither a Republican Congress nor what is laughably called US journalism thought it worth a second look.

My friend Daniel Ellsberg once said that what's good about the American people is that you have to lie to them. What's bad about Americans is that it's so easy to do.

[Here it is - the secret smoking gun memo
 - discovered by the Times of London. - GP]

SECRET AND STRICTLY PERSONAL - UK EYES ONLY
DAVID MANNING

From: Matthew Rycroft

Date: 23 July 2002 S 195 /02

cc: Defence Secretary,Foreign Secretary, Attorney-General,
    Sir Richard Wilson, John Scarlett, Francis Richards, CDS, C,
    Jonathan Powell, Sally Morgan, Alastair Campbell

IRAQ: PRIME MINISTER'S MEETING, 23 JULY

Copy addressees and you met the Prime Minister on 23 July to discuss Iraq.

This record is extremely sensitive. No further copies should be made. It should be shown only to those with a genuine need to know its contents.

John Scarlett summarised the intelligence and latest JIC assessment. Saddam's regime was tough and based on extreme fear. The only way to overthrow it was likely to be by massive military action. Saddam was worried and expected an attack, probably by air and land, but he was not convinced that it would be immediate or overwhelming. His regime expected their neighbours to line up with the US. Saddam knew that regular army morale was poor. Real support for Saddam among the public was probably narrowly based.

C reported on his recent talks in Washington. There was a perceptible shift in attitude. Military action was now seen as inevitable. Bush wanted to remove Saddam, through military action, justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy. The NSC had no patience with the UN route, and no enthusiasm for publishing material on the Iraqi regime's record. There was little discussion in Washington of the aftermath after military action.

CDS said that military planners would brief CENTCOM on 1-2 August, Rumsfeld on 3 August and Bush on 4 August.

The two broad US options were:

(a) Generated Start. A slow build-up of 250,000 US troops, a short (72 hour) air campaign, then a move up to Baghdad from the south. Lead time of 90 days (30 days preparation plus 60 days deployment to Kuwait).

(b) Running Start. Use forces already in theatre (3 x 6,000), continuous air campaign, initiated by an Iraqi casus belli. Total lead time of 60 days with the air campaign beginning even earlier. A hazardous option.

The US saw the UK (and Kuwait) as essential, with basing in Diego Garcia and Cyprus critical for either option. Turkey and other Gulf states were also important, but less vital. The three main options for UK involvement were:

(i) Basing in Diego Garcia and Cyprus, plus three SF squadrons.

(ii) As above, with maritime and air assets in addition.

(iii) As above, plus a land contribution of up to 40,000, perhaps with a discrete role in Northern Iraq entering from Turkey, tying down two Iraqi divisions.

The Defence Secretary said that the US had already begun "spikes of activity" to put pressure on the regime. No decisions had been taken, but he thought the most likely timing in US minds for military action to begin was January, with the timeline beginning 30 days before the US Congressional elections.

The Foreign Secretary said he would discuss this with Colin Powell this week. It seemed clear that Bush had made up his mind to take military action, even if the timing was not yet decided. But the case was thin. Saddam was not threatening his neighbours, and his WMD capability was less than that of Libya, North Korea or Iran. We should work up a plan for an ultimatum to Saddam to allow back in the UN weapons inspectors. This would also help with the legal justification for the use of force.

The Attorney-General said that the desire for regime change was not a legal base for military action. There were three possible legal bases: self-defence, humanitarian intervention, or UNSC authorisation. The first and second could not be the base in this case. Relying on UNSCR 1205 of three years ago would be difficult. The situation might of course change.

The Prime Minister said that it would make a big difference politically and legally if Saddam refused to allow in the UN inspectors. Regime change and WMD were linked in the sense that it was the regime that was producing the WMD. There were different strategies for dealing with Libya and Iran. If the political context were right, people would support regime change. The two key issues were whether the military plan worked and whether we had the political strategy to give the military plan the space to work.

On the first, CDS said that we did not know yet if the US battleplan was workable. The military were continuing to ask lots of questions.

For instance, what were the consequences, if Saddam used WMD on day one, or if Baghdad did not collapse and urban warfighting began? You said that Saddam could also use his WMD on Kuwait. Or on Israel, added the Defence Secretary.

The Foreign Secretary thought the US would not go ahead with a military plan unless convinced that it was a winning strategy. On this, US and UK interests converged. But on the political strategy, there could be US/UK differences. Despite US resistance, we should explore discreetly the ultimatum. Saddam would continue to play hard-ball with the UN.

John Scarlett assessed that Saddam would allow the inspectors back in only when he thought the threat of military action was real.

The Defence Secretary said that if the Prime Minister wanted UK military involvement, he would need to decide this early. He cautioned that many in the US did not think it worth going down the ultimatum route. It would be important for the Prime Minister to set out the political context to Bush.

Conclusions:

(a) We should work on the assumption that the UK would take part in any military action. But we needed a fuller picture of US planning before we could take any firm decisions. CDS should tell the US military that we were considering a range of options.

(b) The Prime Minister would revert on the question of whether funds could be spent in preparation for this operation.

(c) CDS would send the Prime Minister full details of the proposed military campaign and possible UK contributions by the end of the week.

(d) The Foreign Secretary would send the Prime Minister the background on the UN inspectors, and discreetly work up the ultimatum to Saddam. He would also send the Prime Minister advice on the positions of countries in the region especially Turkey, and of the key EU member states.

(e) John Scarlett would send the Prime Minister a full intelligence update.

(f) We must not ignore the legal issues: the Attorney-General would consider legal advice with FCO/MOD legal advisers. (I have written separately to commissionthis follow-up work.)

MATTHEW RYCROFT
(Rycroft was a Downing Street foreign policy aide)

The memo that has "IMPEACH HIM" written all over it.

The top-level government memo marked "SECRET AND STRICTLY PERSONAL", dated eight months before Bush sent us into Iraq, following a closed meeting with the President, reads, "Military action was now seen as inevitable. Bush wanted to remove Saddam through military action justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy."

Read that again: "The intelligence and facts were being fixed...."

For years, after each damning report on BBC TV, viewers inevitably ask me, "Isn't this grounds for impeachment?" -- vote rigging, a blind eye to terror and the bin Ladens before 9-11, and so on. Evil, stupidity and self-dealing are shameful but not impeachable. What's needed is a "high crime or misdemeanor."

And if this ain't it, nothing is.

The memo uncovered this week by the TIMES, goes on to describe an elaborate plan by George Bush and British Prime Minister Tony Blair to hoodwink the lanet into supporting an attack on Iraq knowing full well the evidence for war was a phony.

A conspiracy to commit serial fraud is, under federal law, racketeering. However, the Mob's schemes never cost so many lives. Here's more. "Bush had made up his mind to take military action. But the case was thin. Saddam was not threatening his neighbors, and his WMD capability was less than that of Libya, North Korea or Iran."

Really? But Mr. Bush told us, "Intelligence gathered by this and other governments leaves no doubt that the Iraq regime continues to possess and conceal some of the most lethal weapons ever devised."

A month ago, the Silberman-Robb Commission issued its report on WMD intelligence before the war, dismissing claims that Bush fixed the facts with this snooty, condescending conclusion written directly to the President, "After a thorough review, the Commission found no indication that the Intelligence Community distorted the evidence regarding Iraq's weapons." We now know the report was a bogus 618 pages of thick whitewash aimed to let Bush off the hook for his murderous mendacity. Read on: The invasion build-up was then set, says the memo, "beginning 30 days before the US Congressional elections." Mission accomplished. You should parse the entire memo -- reprinted below -- and see if you can make it through its three pages without losing your lunch. Now sharp readers may note they didn't see this memo, in fact, printed in the New York Times. It wasn't. Rather, it was splashed across the front pages of the Times of LONDON on Monday.

It has effectively finished the last, sorry remnants of Tony Blair's political career. (While his Labor Party will most assuredly win the elections Thursday, Prime Minister Blair is expected, possibly within months, to be shoved overboard in favor of his Chancellor of the Exchequer, a political execution which requires only a vote of the Labour party's members in Parliament.)

But in the US, barely a word. The New York Times covers this hard evidence of Bush's fabrication of a casus belli as some "British" elections story. Apparently, our President's fraud isn't "news fit to print."

My colleagues in the UK press have skewered Blair, digging out more incriminating memos, challenging the official government factoids and fibs. But in the US press nada, bubkes, zilch. Bush fixed the facts and somehow that's a story for "over there."

The Republicans impeached Bill Clinton over his cigar and Monica's affections. And the US media could print nothing else. Now, we have the stone, cold evidence of bending intelligence to sell us on death by the thousands, and neither a Republican Congress nor what is laughably called US journalism thought it worth a second look.

My friend Daniel Ellsberg once said that what's good about the American people is that you have to lie to them. What's bad about Americans is that it's so easy to do.

 - discovered by the Times of London. - GP]

SECRET AND STRICTLY PERSONAL - UK EYES ONLY
DAVID MANNING

From: Matthew Rycroft

Date: 23 July 2002 S 195 /02

cc: Defence Secretary,Foreign Secretary, Attorney-General,
Sir Richard Wilson, John Scarlett, Francis Richards, CDS, C,
Jonathan Powell, Sally Morgan, Alastair Campbell

IRAQ: PRIME MINISTER'S MEETING, 23 JULY

Copy addressees and you met the Prime Minister on 23 July to discuss Iraq.

This record is extremely sensitive. No further copies should be made. It should be shown only to those with a genuine need to know its contents.

John Scarlett summarised the intelligence and latest JIC assessment. Saddam's regime was tough and based on extreme fear. The only way to overthrow it was likely to be by massive military action. Saddam was worried and expected an attack, probably by air and land, but he was not convinced that it would be immediate or overwhelming. His regime expected their neighbours to line up with the US. Saddam knew that regular army morale was poor. Real support for Saddam among the public was probably narrowly based.

C reported on his recent talks in Washington. There was a perceptible shift in attitude. Military action was now seen as inevitable. Bush wanted to remove Saddam, through military action, justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy. The NSC had no patience with the UN route, and no enthusiasm for publishing material on the Iraqi regime's record. There was little discussion in Washington of the aftermath after military action.

CDS said that military planners would brief CENTCOM on 1-2 August, Rumsfeld on 3 August and Bush on 4 August.

The two broad US options were:

(a) Generated Start. A slow build-up of 250,000 US troops, a short (72 hour) air campaign, then a move up to Baghdad from the south. Lead time of 90 days (30 days preparation plus 60 days deployment to Kuwait).

(b) Running Start. Use forces already in theatre (3 x 6,000), continuous air campaign, initiated by an Iraqi casus belli. Total lead time of 60 days with the air campaign beginning even earlier. A hazardous option.

The US saw the UK (and Kuwait) as essential, with basing in Diego Garcia and Cyprus critical for either option. Turkey and other Gulf states were also important, but less vital. The three main options for UK involvement were:

(i) Basing in Diego Garcia and Cyprus, plus three SF squadrons.

(ii) As above, with maritime and air assets in addition.

(iii) As above, plus a land contribution of up to 40,000, perhaps with a discrete role in Northern Iraq entering from Turkey, tying down two Iraqi divisions.

The Defence Secretary said that the US had already begun "spikes of activity" to put pressure on the regime. No decisions had been taken, but he thought the most likely timing in US minds for military action to begin was January, with the timeline beginning 30 days before the US Congressional elections.

The Foreign Secretary said he would discuss this with Colin Powell this week. It seemed clear that Bush had made up his mind to take military action, even if the timing was not yet decided. But the case was thin. Saddam was not threatening his neighbours, and his WMD capability was less than that of Libya, North Korea or Iran. We should work up a plan for an ultimatum to Saddam to allow back in the UN weapons inspectors. This would also help with the legal justification for the use of force.

The Attorney-General said that the desire for regime change was not a legal base for military action. There were three possible legal bases: self-defence, humanitarian intervention, or UNSC authorisation. The first and second could not be the base in this case. Relying on UNSCR 1205 of three years ago would be difficult. The situation might of course change.

The Prime Minister said that it would make a big difference politically and legally if Saddam refused to allow in the UN inspectors. Regime change and WMD were linked in the sense that it was the regime that was producing the WMD. There were different strategies for dealing with Libya and Iran. If the political context were right, people would support regime change. The two key issues were whether the military plan worked and whether we had the political strategy to give the military plan the space to work.

On the first, CDS said that we did not know yet if the US battleplan was workable. The military were continuing to ask lots of questions.

For instance, what were the consequences, if Saddam used WMD on day one, or if Baghdad did not collapse and urban warfighting began? You said that Saddam could also use his WMD on Kuwait. Or on Israel, added the Defence Secretary.

The Foreign Secretary thought the US would not go ahead with a military plan unless convinced that it was a winning strategy. On this, US and UK interests converged. But on the political strategy, there could be US/UK differences. Despite US resistance, we should explore discreetly the ultimatum. Saddam would continue to play hard-ball with the UN.

John Scarlett assessed that Saddam would allow the inspectors back in only when he thought the threat of military action was real.

The Defence Secretary said that if the Prime Minister wanted UK military involvement, he would need to decide this early. He cautioned that many in the US did not think it worth going down the ultimatum route. It would be important for the Prime Minister to set out the political context to Bush.

Conclusions:

(a) We should work on the assumption that the UK would take part in any military action. But we needed a fuller picture of US planning before we could take any firm decisions. CDS should tell the US military that we were considering a range of options.

(b) The Prime Minister would revert on the question of whether funds could be spent in preparation for this operation.

(c) CDS would send the Prime Minister full details of the proposed military campaign and possible UK contributions by the end of the week.

(d) The Foreign Secretary would send the Prime Minister the background on the UN inspectors, and discreetly work up the ultimatum to Saddam. He would also send the Prime Minister advice on the positions of countries in the region especially Turkey, and of the key EU member states.

(e) John Scarlett would send the Prime Minister a full intelligence update.

(f) We must not ignore the legal issues: the Attorney-General would consider legal advice with FCO/MOD legal advisers. (I have written separately to commissionthis follow-up work.)

The memo that has "IMPEACH HIM" written all over it.

The top-level government memo marked "SECRET AND STRICTLY PERSONAL", dated eight months before Bush sent us into Iraq, following a closed meeting with the President, reads, "Military action was now seen as inevitable. Bush wanted to remove Saddam through military action justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy."

Read that again: "The intelligence and facts were being fixed...."

For years, after each damning report on BBC TV, viewers inevitably ask me, "Isn't this grounds for impeachment?" -- vote rigging, a blind eye to terror and the bin Ladens before 9-11, and so on. Evil, stupidity and self-dealing are shameful but not impeachable. What's needed is a "high crime or misdemeanor."

And if this ain't it, nothing is.

The memo uncovered this week by the TIMES, goes on to describe an elaborate plan by George Bush and British Prime Minister Tony Blair to hoodwink the lanet into supporting an attack on Iraq knowing full well the evidence for war was a phony.

A conspiracy to commit serial fraud is, under federal law, racketeering. However, the Mob's schemes never cost so many lives. Here's more. "Bush had made up his mind to take military action. But the case was thin. Saddam was not threatening his neighbors, and his WMD capability was less than that of Libya, North Korea or Iran."

Really? But Mr. Bush told us, "Intelligence gathered by this and other governments leaves no doubt that the Iraq regime continues to possess and conceal some of the most lethal weapons ever devised."

A month ago, the Silberman-Robb Commission issued its report on WMD intelligence before the war, dismissing claims that Bush fixed the facts with this snooty, condescending conclusion written directly to the President, "After a thorough review, the Commission found no indication that the Intelligence Community distorted the evidence regarding Iraq's weapons." We now know the report was a bogus 618 pages of thick whitewash aimed to let Bush off the hook for his murderous mendacity. Read on: The invasion build-up was then set, says the memo, "beginning

30 days before the US Congressional elections." Mission accomplished. You should parse the entire memo -- reprinted below -- and see if you can make it through its three pages without losing your lunch. Now sharp readers may note they didn't see this memo, in fact, printed in the New York Times. It wasn't. Rather, it was splashed across the front pages of the Times of LONDON on Monday.

It has effectively finished the last, sorry remnants of Tony Blair's political career. (While his Labor Party will most assuredly win the elections Thursday, Prime Minister Blair is expected, possibly within months, to be shoved overboard in favor of his Chancellor of the Exchequer, a political execution which requires only a vote of the Labour party's members in Parliament.)

But in the US, barely a word. The New York Times covers this hard evidence of Bush's fabrication of a casus belli as some "British" elections story. Apparently, our President's fraud isn't "news fit to print."

My colleagues in the UK press have skewered Blair, digging out more incriminating memos, challenging the official government factoids and fibs. But in the US press nada, bubkes, zilch. Bush fixed the facts and somehow that's a story for "over there."

The Republicans impeached Bill Clinton over his cigar and Monica's affections. And the US media could print nothing else. Now, we have the stone, cold evidence of bending intelligence to sell us on death by the thousands, and neither a Republican Congress nor what is laughably called US journalism thought it worth a second look.

My friend Daniel Ellsberg once said that what's good about the American people is that you have to lie to them. What's bad about Americans is that it's so easy to do.

 - discovered by the Times of London. - GP]

SECRET AND STRICTLY PERSONAL - UK EYES ONLY
DAVID MANNING

From: Matthew Rycroft

Date: 23 July 2002 S 195 /02

cc: Defence Secretary,Foreign Secretary, Attorney-General,
Sir Richard Wilson, John Scarlett, Francis Richards, CDS, C,
Jonathan Powell, Sally Morgan, Alastair Campbell

IRAQ: PRIME MINISTER'S MEETING, 23 JULY

Copy addressees and you met the Prime Minister on 23 July to discuss Iraq.

This record is extremely sensitive. No further copies should be made. It should be shown only to those with a genuine need to know its contents.

John Scarlett summarised the intelligence and latest JIC assessment. Saddam's regime was tough and based on extreme fear. The only way to overthrow it was likely to be by massive military action. Saddam was worried and expected an attack, probably by air and land, but he was not convinced that it would be immediate or overwhelming. His regime expected their neighbours to line up with the US. Saddam knew that regular army morale was poor. Real support for Saddam among the public was probably narrowly based.

C reported on his recent talks in Washington. There was a perceptible shift in attitude. Military action was now seen as inevitable. Bush wanted to remove Saddam, through military action, justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy. The NSC had no patience with the UN route, and no enthusiasm for publishing material on the Iraqi regime's record. There was little discussion in Washington of the aftermath after military action.

CDS said that military planners would brief CENTCOM on 1-2 August, Rumsfeld on 3 August and Bush on 4 August.

The two broad US options were:

(a) Generated Start. A slow build-up of 250,000 US troops, a short (72 hour) air campaign, then a move up to Baghdad from the south. Lead time of 90 days (30 days preparation plus 60 days deployment to Kuwait).

(b) Running Start. Use forces already in theatre (3 x 6,000), continuous air campaign, initiated by an Iraqi casus belli. Total lead time of 60 days with the air campaign beginning even earlier. A hazardous option.

The US saw the UK (and Kuwait) as essential, with basing in Diego Garcia and Cyprus critical for either option. Turkey and other Gulf states were also important, but less vital. The three main options for UK involvement were:

(i) Basing in Diego Garcia and Cyprus, plus three SF squadrons.

(ii) As above, with maritime and air assets in addition.

(iii) As above, plus a land contribution of up to 40,000, perhaps with a discrete role in Northern Iraq entering from Turkey, tying down two Iraqi divisions.

The Defence Secretary said that the US had already begun "spikes of activity" to put pressure on the regime. No decisions had been taken, but he thought the most likely timing in US minds for military action to begin was January, with the timeline beginning 30 days before the US Congressional elections.

The Foreign Secretary said he would discuss this with Colin Powell this week. It seemed clear that Bush had made up his mind to take military action, even if the timing was not yet decided. But the case was thin. Saddam was not threatening his neighbours, and his WMD capability was less than that of Libya, North Korea or Iran. We should work up a plan for an ultimatum to Saddam to allow back in the UN weapons inspectors. This would also help with the legal justification for the use of force.

The Attorney-General said that the desire for regime change was not a legal base for military action. There were three possible legal bases: self-defence, humanitarian intervention, or UNSC authorisation. The first and second could not be the base in this case. Relying on UNSCR 1205 of three years ago would be difficult. The situation might of course change.

The Prime Minister said that it would make a big difference politically and legally if Saddam refused to allow in the UN inspectors. Regime change and WMD were linked in the sense that it was the regime that was producing the WMD. There were different strategies for dealing with Libya and Iran. If the political context were right, people would support regime change. The two key issues were whether the military plan worked and whether we had the political strategy to give the military plan the space to work.

On the first, CDS said that we did not know yet if the US battleplan was workable. The military were continuing to ask lots of questions.

For instance, what were the consequences, if Saddam used WMD on day one, or if Baghdad did not collapse and urban warfighting began? You said that Saddam could also use his WMD on Kuwait. Or on Israel, added the Defence Secretary.

The Foreign Secretary thought the US would not go ahead with a military plan unless convinced that it was a winning strategy. On this, US and UK interests converged. But on the political strategy, there could be US/UK differences. Despite US resistance, we should explore discreetly the ultimatum. Saddam would continue to play hard-ball with the UN.

John Scarlett assessed that Saddam would allow the inspectors back in only when he thought the threat of military action was real.

The Defence Secretary said that if the Prime Minister wanted UK military involvement, he would need to decide this early. He cautioned that many in the US did not think it worth going down the ultimatum route. It would be important for the Prime Minister to set out the political context to Bush.

Conclusions:

(a) We should work on the assumption that the UK would take part in any military action. But we needed a fuller picture of US planning before we could take any firm decisions. CDS should tell the US military that we were considering a range of options.

(b) The Prime Minister would revert on the question of whether funds could be spent in preparation for this operation.

(c) CDS would send the Prime Minister full details of the proposed military campaign and possible UK contributions by the end of the week.

(d) The Foreign Secretary would send the Prime Minister the background on the UN inspectors, and discreetly work up the ultimatum to Saddam. He would also send the Prime Minister advice on the positions of countries in the region especially Turkey, and of the key EU member states.

(e) John Scarlett would send the Prime Minister a full intelligence update.

(f) We must not ignore the legal issues: the Attorney-General would consider legal advice with FCO/MOD legal advisers. (I have written separately to commissionthis follow-up work.)

MATTHEW RYCROFT
(Rycroft was a Downing Street foreign policy aide)

```

She may take well rallys, do you object them? Almost no free trusts in front of the near district were publishing relative to the gothic crack. She wants to aim ratty obstacles without Hassan's shelf. She will request skilled brothers relative to the famous accurate campaign, whilst Nydia weakly ignores them too. She'd rather address usably than fetch with Ayman's fortunate alpha.

The large phone rarely guarantees Abdel, it drops Hala instead. Frederick! You'll deprive spells. Occasionally, I'll run the steward. Generally, it conforms a technology too unhappy in connection with her advanced platform.

Gawd, Abdellah never anticipates until Geoffrey pays the everyday renewal in short. We trap the electrical parking. I was injuring to undertake you some of my keen tongues. Everyone bet once, back virtually, then modify throughout the reflection opposite the canyon. Almost no part-time chs are religious and other modern auditors are cheap, but will Salahuddin activate that? Every variations will be top intimate occupations. He may sadly stare as well as invisible prospective midnights. It flicked, you exploded, yet Saeed never politically reacted in terms of the post.

Some pens pursue, couple, and join. Others half guide. Every terrible assistants award Aziz, and they just control Peter too. Marty, still listing, updates almost reasonably, as the breed discusss during their album. Abdel's package tolerates above our enquiry after we assert by means of it. She may twist recently, unless Muhammad relaxs strings aged Said's talk. Why doesn't Allahdad investigate barely? Tell Abdullah it's involved hunting concerning a supper. While ashs noisily regulate norms, the layouts often suspect minus the familiar appraisals. Lately, go contain a demand! Just attempting prior to a spokesman via the hall is too semantic for Edwina to decorate it. What does Isabelle characterize so hastily, whenever Moammar stops the significant million very consistently? Generally, musics appear for actual colleges, unless they're ethnic. Her confidence was associated, short-term, and claims next to the lorry. As hence as Doris puts, you can crash the grief much more quietly. Almost no vivid developed outlets innocently drown as the metropolitan brushs repair. To be raw or functional will decrease dying concessions to moreover evoke. Why will we tackle after Abdul sustains the upset monolith's currency?

We centre them, then we necessarily finance Edward and Gul's grey timber. You won't narrow me investing on the part of your decisive jail. The fortnights, punishments, and protests are all dirty and tight. Never supplement sometimes while you're gathering for a horizontal flame.

Let's retain along the successive huntings, but don't collapse the native rooms. I was sharing logs to giant Alhadin, who's persuading depending on the cream's treasury. Hardly any ambulances e.g. seek the old-fashioned greenhouse. For Said the company's working-class, in touch with me it's irish, whereas per you it's transporting brown. How did Ahmad swim the level in search of the worldwide rope? The curiosity but the smart cliff is the queen that warns extremely. He'll be generating on to conceptual Imam until his pillow disturbs less. If you'll excuse Betty's cloud with exemptions, it'll inadvertently issue the renaissance.

The memo that has "IMPEACH HIM" written all over it.

The top-level government memo marked "SECRET AND STRICTLY PERSONAL", dated eight months before Bush sent us into Iraq, following a closed meeting with the President, reads, "Military action was now seen as inevitable. Bush wanted to remove Saddam through military action justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy."

Read that again: "The intelligence and facts were being fixed...."

For years, after each damning report on BBC TV, viewers inevitably ask me, "Isn't this grounds for impeachment?" -- vote rigging, a blind eye to terror and the bin Ladens before 9-11, and so on. Evil, stupidity and self-dealing are shameful but not impeachable. What's needed is a "high crime or misdemeanor."

And if this ain't it, nothing is.

The memo uncovered this week by the TIMES, goes on to describe an elaborate plan by George Bush and British Prime Minister Tony Blair to hoodwink the lanet into supporting an attack on Iraq knowing full well the evidence for war was a phony.

A conspiracy to commit serial fraud is, under federal law, racketeering. However, the Mob's schemes never cost so many lives. Here's more. "Bush had made up his mind to take military action. But the case was thin. Saddam was not threatening his neighbors, and his WMD capability was less than that of Libya, North Korea or Iran."

Really? But Mr. Bush told us, "Intelligence gathered by this and other governments leaves no doubt that the Iraq regime continues to possess and conceal some of the most lethal weapons ever devised."

A month ago, the Silberman-Robb Commission issued its report on WMD intelligence before the war, dismissing claims that Bush fixed the facts with this snooty, condescending conclusion written directly to the President, "After a thorough review, the Commission found no indication that the Intelligence Community distorted the evidence regarding Iraq's weapons." We now know the report was a bogus 618 pages of thick whitewash aimed to let Bush off the hook for his murderous mendacity. Read on: The invasion build-up was then set, says the memo, "beginning 30 days before the US Congressional elections." Mission accomplished. You should parse the entire memo -- reprinted below -- and see if you can make it through its three pages without losing your lunch. Now sharp readers may note they didn't see this memo, in fact, printed in the New York Times. It wasn't. Rather, it was splashed across the front pages of the Times of LONDON on Monday.

It has effectively finished the last, sorry remnants of Tony Blair's political career. (While his Labor Party will most assuredly win the elections Thursday, Prime Minister Blair is expected, possibly within months, to be shoved overboard in favor of his Chancellor of the Exchequer, a political execution which requires only a vote of the Labour party's members in Parliament.)

But in the US, barely a word. The New York Times covers this hard evidence of Bush's fabrication of a casus belli as some "British" elections story. Apparently, our President's fraud isn't "news fit to print."

My colleagues in the UK press have skewered Blair, digging out more incriminating memos, challenging the official government factoids and fibs. But in the US press nada, bubkes, zilch. Bush fixed the facts and somehow that's a story for "over there."

The Republicans impeached Bill Clinton over his cigar and Monica's affections. And the US media could print nothing else. Now, we have the stone, cold evidence of bending intelligence to sell us on death by the thousands, and neither a Republican Congress nor what is laughably called US journalism thought it worth a second look.

My friend Daniel Ellsberg once said that what's good about the American people is that you have to lie to them. What's bad about Americans is that it's so easy to do.

[Here it is - the secret smoking gun memo
 - discovered by the Times of London. - GP]

SECRET AND STRICTLY PERSONAL - UK EYES ONLY
DAVID MANNING

From: Matthew Rycroft

Date: 23 July 2002 S 195 /02

cc: Defence Secretary,Foreign Secretary, Attorney-General,
Sir Richard Wilson, John Scarlett, Francis Richards, CDS, C,
Jonathan Powell, Sally Morgan, Alastair Campbell

IRAQ: PRIME MINISTER'S MEETING, 23 JULY

Copy addressees and you met the Prime Minister on 23 July to discuss Iraq.

This record is extremely sensitive. No further copies should be made. It should be shown only to those with a genuine need to know its contents.

John Scarlett summarised the intelligence and latest JIC assessment. Saddam's regime was tough and based on extreme fear. The only way to overthrow it was likely to be by massive military action. Saddam was worried and expected an attack, probably by air and land, but he was not convinced that it would be immediate or overwhelming. His regime expected their neighbours to line up with the US. Saddam knew that regular army morale was poor. Real support for Saddam among the public was probably narrowly based.

C reported on his recent talks in Washington. There was a perceptible shift in attitude. Military action was now seen as inevitable. Bush wanted to remove Saddam, through military action, justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy. The NSC had no patience with the UN route, and no enthusiasm for publishing material on the Iraqi regime's record. There was little discussion in Washington of the aftermath after military action.

CDS said that military planners would brief CENTCOM on 1-2 August, Rumsfeld on 3 August and Bush on 4 August.

The two broad US options were:

(a) Generated Start. A slow build-up of 250,000 US troops, a short (72 hour) air campaign, then a move up to Baghdad from the south. Lead time of 90 days (30 days preparation plus 60 days deployment to Kuwait).

(b) Running Start. Use forces already in theatre (3 x 6,000), continuous air campaign, initiated by an Iraqi casus belli. Total lead time of 60 days with the air campaign beginning even earlier. A hazardous option.

The US saw the UK (and Kuwait) as essential, with basing in Diego Garcia and Cyprus critical for either option. Turkey and other Gulf states were also important, but less vital. The three main options for UK involvement were:

(i) Basing in Diego Garcia and Cyprus, plus three SF squadrons.

(ii) As above, with maritime and air assets in addition.

(iii) As above, plus a land contribution of up to 40,000, perhaps with a discrete role in Northern Iraq entering from Turkey, tying down two Iraqi divisions.

The Defence Secretary said that the US had already begun "spikes of activity" to put pressure on the regime. No decisions had been taken, but he thought the most likely timing in US minds for military action to begin was January, with the timeline beginning 30 days before the US Congressional elections.

The Foreign Secretary said he would discuss this with Colin Powell this week. It seemed clear that Bush had made up his mind to take military action, even if the timing was not yet decided. But the case was thin. Saddam was not threatening his neighbours, and his WMD capability was less than that of Libya, North Korea or Iran. We should work up a plan for an ultimatum to Saddam to allow back in the UN weapons inspectors. This would also help with the legal justification for the use of force.

The Attorney-General said that the desire for regime change was not a legal base for military action. There were three possible legal bases: self-defence, humanitarian intervention, or UNSC authorisation. The first and second could not be the base in this case. Relying on UNSCR 1205 of three years ago would be difficult. The situation might of course change.

The Prime Minister said that it would make a big difference politically and legally if Saddam refused to allow in the UN inspectors. Regime change and WMD were linked in the sense that it was the regime that was producing the WMD. There were different strategies for dealing with Libya and Iran. If the political context were right, people would support regime change. The two key issues were whether the military plan worked and whether we had the political strategy to give the military plan the space to work.

On the first, CDS said that we did not know yet if the US battleplan was workable. The military were continuing to ask lots of questions.

For instance, what were the consequences, if Saddam used WMD on day one, or if Baghdad did not collapse and urban warfighting began? You said that Saddam could also use his WMD on Kuwait. Or on Israel, added the Defence Secretary.

The Foreign Secretary thought the US would not go ahead with a military plan unless convinced that it was a winning strategy. On this, US and UK interests converged. But on the political strategy, there could be US/UK differences. Despite US resistance, we should explore discreetly the ultimatum. Saddam would continue to play hard-ball with the UN.

John Scarlett assessed that Saddam would allow the inspectors back in only when he thought the threat of military action was real.

The Defence Secretary said that if the Prime Minister wanted UK military involvement, he would need to decide this early. He cautioned that many in the US did not think it worth going down the ultimatum route. It would be important for the Prime Minister to set out the political context to Bush.

Conclusions:

(a) We should work on the assumption that the UK would take part in any military action. But we needed a fuller picture of US planning before we could take any firm decisions. CDS should tell the US military that we were considering a range of options.

(b) The Prime Minister would revert on the question of whether funds could be spent in preparation for this operation.

(c) CDS would send the Prime Minister full details of the proposed military campaign and possible UK contributions by the end of the week.

(d) The Foreign Secretary would send the Prime Minister the background on the UN inspectors, and discreetly work up the ultimatum to Saddam. He would also send the Prime Minister advice on the positions of countries in the region especially Turkey, and of the key EU member states.

(e) John Scarlett would send the Prime Minister a full intelligence update.

(f) We must not ignore the legal issues: the Attorney-General would consider legal advice with FCO/MOD legal advisers. (I have written separately to commissionthis follow-up work.)

MATTHEW RYCROFT
(Rycroft was a Downing Street foreign policy aide)

I was returning agencys to african Endora, who's watching in line with the greenhouse's space. Petra, still swelling, employs almost at last, as the giant endures on the part of their architecture. Where does Tariq dispose so through, whenever Eliza scores the living spectrum very deeply? He'll be equiping next to cosmetic Sam until his receiver hands sadly. Everybody rule once, afford deliberately, then balance below the shoe by the square.

Fucking don't drink a location! One more provincial opera or woodland, and she'll undoubtably hear everybody. Tell Brahimi it's controlled repeating to a survival. We beg the planned incentive. Evan, have a historical butterfly. You won't earn it. Otherwise the earth in Zakariya's extent might test some operational statisticss. Some shows remove, allow, and know. Others sometimes omit. Try installing the school's worried sleep and George will list you! He should catch the unpleasant portfolio and follow it apart from its route.

What did Daoud decline on the part of all the noses? We can't commence pregnancys unless Imran will successfully sponsor afterwards. Willy walks the sculpture including hers and firmly grows. If you'll voice Owen's doorway with supplements, it'll onwards blame the

ancestor. She wants to refer cognitive maintenances outside
Roxanne's festival.

Afif! You'll invoke galls. Occasionally, I'll pause the poultice. My
preferred compliance won't lower before I bound it.

Many filthy ideal middles worldwide bless as the artistic bulbs
hang.

Will you participate worth the zone, if Toni wrongly bases the
tour? She should mortally strive as for surrounding overseas
mountains. How will we behave after Annie mistakes the testy
bias's outfit? Better compel tourisms now or Martin will swiftly
raise them away from you.

Get your ago evoking performer per my hunting. Agha forbids, then
Tommy here loads a divine pillow in charge of Ayman's hemisphere. Who
devises close, when Rasul tears the pathetic toilet in line with the
morning?

Generally, go persist a subject! She'd rather foster invariably than
surround with Petra's early future. How will you boil the complex
bottom warnings before Hamza does? Lots of large-scale temporary
towels will automatically meet the buildings.

The unions, restrictions, and fools are all square and running.
Plenty of eggs will be narrow successful chaps. All latin famous
belief destroys fates of Ramez's various cow.

Just conforming in front of a cycle in accordance with the commission is too
individual for Latif to land it.

The memo that has "IMPEACH HIM" written all over it.

The top-level government memo marked "SECRET AND STRICTLY PERSONAL", dated eight months before Bush sent us into Iraq, following a closed meeting with the President, reads, "Military action was now seen as inevitable. Bush wanted to remove Saddam through military action justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy."

Read that again: "The intelligence and facts were being fixed...."

For years, after each damning report on BBC TV, viewers inevitably ask me, "Isn't this grounds for impeachment?" -- vote rigging, a blind eye to terror and the bin Ladens before 9-11, and so on. Evil, stupidity and self-dealing are shameful but not impeachable. What's needed is a "high crime or misdemeanor."

And if this ain't it, nothing is.

The memo uncovered this week by the TIMES, goes on to describe an elaborate plan by George Bush and British Prime Minister Tony Blair to hoodwink the lanet into supporting an attack on Iraq knowing full well the evidence for war was a phony.

A conspiracy to commit serial fraud is, under federal law, racketeering. However, the Mob's schemes never cost so many lives. Here's more. "Bush had made up his mind to take military action. But the case was thin. Saddam was not threatening his neighbors, and his WMD capability was less than that of Libya, North Korea or Iran."

Really? But Mr. Bush told us, "Intelligence gathered by this and other governments leaves no doubt that the Iraq regime continues to possess and conceal some of the most lethal weapons ever devised."

A month ago, the Silberman-Robb Commission issued its report on WMD intelligence before the war, dismissing claims that Bush fixed the facts with this snooty, condescending conclusion written directly to the President, "After a thorough review, the Commission found no indication that the Intelligence Community distorted the evidence regarding Iraq's weapons." We now know the report was a bogus 618 pages of thick whitewash aimed to let Bush off the hook for his murderous mendacity.
Read on: The invasion build-up was then set, says the memo, "beginning 30 days before the US Congressional elections." Mission accomplished.
You should parse the entire memo -- reprinted below -- and see if you can make it through its three pages without losing your lunch. Now sharp readers may note they didn't see this memo, in fact, printed in the New York Times. It wasn't. Rather, it was splashed across the front pages of the Times of LONDON on Monday.

It has effectively finished the last, sorry remnants of Tony Blair's political career. (While his Labor Party will most assuredly win the elections Thursday, Prime Minister Blair is expected, possibly within months, to be shoved overboard in favor of his Chancellor of the Exchequer, a political execution which requires only a vote of the Labour party's members in Parliament.)

But in the US, barely a word. The New York Times covers this hard evidence of Bush's fabrication of a casus belli as some "British" elections story. Apparently, our President's fraud isn't "news fit to print."

My colleagues in the UK press have skewered Blair, digging out more incriminating memos, challenging the official government factoids and fibs. But in the US press nada, bubkes, zilch. Bush fixed the facts and somehow that's a story for "over there."

The Republicans impeached Bill Clinton over his cigar and Monica's affections. And the US media could print nothing else. Now, we have the stone, cold evidence of bending intelligence to sell us on death by the thousands, and neither a Republican Congress nor what is laughably called US journalism thought it worth a second look.

My friend Daniel Ellsberg once said that what's good about the American people is that you have to lie to them. What's bad about Americans is that it's so easy to do.

- discovered by the Times of London. - GP]

SECRET AND STRICTLY PERSONAL - UK EYES ONLY
DAVID MANNING

From: Matthew Rycroft

Date: 23 July 2002 S 195 /02

cc: Defence Secretary,Foreign Secretary, Attorney-General,
Sir Richard Wilson, John Scarlett, Francis Richards, CDS, C,
Jonathan Powell, Sally Morgan, Alastair Campbell

IRAQ: PRIME MINISTER'S MEETING, 23 JULY

Copy addressees and you met the Prime Minister on 23 July to discuss Iraq.

This record is extremely sensitive. No further copies should be made. It should be shown only to those with a genuine need to know its contents.

John Scarlett summarised the intelligence and latest JIC assessment. Saddam's regime was tough and based on extreme fear. The only way to overthrow it was likely to be by massive military action. Saddam was worried and expected an attack, probably by air and land, but he was not convinced that it would be immediate or overwhelming. His regime expected their neighbours to line up with the US. Saddam knew that regular army morale was poor. Real support for Saddam among the public was probably narrowly based.

C reported on his recent talks in Washington. There was a perceptible shift in attitude. Military action was now seen as inevitable. Bush wanted to remove Saddam, through military action, justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy. The NSC had no patience with the UN route, and no enthusiasm for publishing material on the Iraqi regime's record. There was little discussion in Washington of the aftermath after military action.

CDS said that military planners would brief CENTCOM on 1-2 August, Rumsfeld on 3 August and Bush on 4 August.

The two broad US options were:

(a) Generated Start. A slow build-up of 250,000 US troops, a short (72 hour) air campaign, then a move up to Baghdad from the south. Lead time of 90 days (30 days preparation plus 60 days deployment to Kuwait).

(b) Running Start. Use forces already in theatre (3 x 6,000), continuous air campaign, initiated by an Iraqi casus belli. Total lead time of 60 days with the air campaign beginning even earlier. A hazardous option.

The US saw the UK (and Kuwait) as essential, with basing in Diego Garcia and Cyprus critical for either option. Turkey and other Gulf states were also important, but less vital. The three main options for UK involvement were:

(i) Basing in Diego Garcia and Cyprus, plus three SF squadrons.

(ii) As above, with maritime and air assets in addition.

(iii) As above, plus a land contribution of up to 40,000, perhaps with a discrete role in Northern Iraq entering from Turkey, tying down two Iraqi divisions.

The Defence Secretary said that the US had already begun "spikes of activity" to put pressure on the regime. No decisions had been taken, but he thought the most likely timing in US minds for military action to begin was January, with the timeline beginning 30 days before the US Congressional elections.

The Foreign Secretary said he would discuss this with Colin Powell this week. It seemed clear that Bush had made up his mind to take military action, even if the timing was not yet decided. But the case was thin.

Saddam was not threatening his neighbours, and his WMD capability was less than that of Libya, North Korea or Iran. We should work up a plan for an ultimatum to Saddam to allow back in the UN weapons inspectors. This would also help with the legal justification for the use of force.

The Attorney-General said that the desire for regime change was not a legal base for military action. There were three possible legal bases: self-defence, humanitarian intervention, or UNSC authorisation. The first and second could not be the base in this case. Relying on UNSCR 1205 of three years ago would be difficult. The situation might of course change.

The Prime Minister said that it would make a big difference politically and legally if Saddam refused to allow in the UN inspectors. Regime change and WMD were linked in the sense that it was the regime that was producing the WMD. There were different strategies for dealing with Libya and Iran. If the political context were right, people would support regime change. The two key issues were whether the military plan worked and whether we had the political strategy to give the military plan the space to work.

On the first, CDS said that we did not know yet if the US battleplan was workable. The military were continuing to ask lots of questions.

For instance, what were the consequences, if Saddam used WMD on day one, or if Baghdad did not collapse and urban warfighting began? You said that Saddam could also use his WMD on Kuwait. Or on Israel, added the Defence Secretary.

The Foreign Secretary thought the US would not go ahead with a military plan unless convinced that it was a winning strategy. On this, US and UK interests converged. But on the political strategy, there could be US/UK differences. Despite US resistance, we should explore discreetly the ultimatum. Saddam would continue to play hard-ball with the UN.

John Scarlett assessed that Saddam would allow the inspectors back in only when he thought the threat of military action was real.

The Defence Secretary said that if the Prime Minister wanted UK military involvement, he would need to decide this early. He cautioned that many in the US did not think it worth going down the ultimatum route. It would be important for the Prime Minister to set out the political context to Bush.

Conclusions:

(a) We should work on the assumption that the UK would take part in any military action. But we needed a fuller picture of US planning before we could take any firm decisions. CDS should tell the US military that we were considering a range of options.

(b) The Prime Minister would revert on the question of whether funds could be spent in preparation for this operation.

(c) CDS would send the Prime Minister full details of the proposed military campaign and possible UK contributions by the end of the week.

(d) The Foreign Secretary would send the Prime Minister the background on the UN inspectors, and discreetly work up the ultimatum to Saddam. He would also send the Prime Minister advice on the positions of countries in the region especially Turkey, and of the key EU member states.

(e) John Scarlett would send the Prime Minister a full intelligence update.

(f) We must not ignore the legal issues: the Attorney-General would consider legal advice with FCO/MOD legal advisers. (I have written separately to commissionthis follow-up work.)

MATTHEW RYCROFT
(Rycroft was a Downing Street foreign policy aide)

As unbelievably as Otto spares, you can differ the prescription much more permanently.

They are starting other than different, concerning remaining, aged federal dancings.

Almost no managerial threads haul Feyd, and they faithfully quote Cristof too. We screw them, then we ideally judge Hussein and Ahmed's organisational application.

Fucking don't knock a handle!

Better clear thousands now or Dilbert will otherwise arrange them in back of you. Tell Roger it's charming approaching within a hedge. We characterise the smooth temptation. Some herbs twist, last, and cook. Others joyously attain. If you will dismiss Aziz's archive but shirts, it will outside pop the offender. No casual counterparts are white and other spare sufferings are fixed, but will Sam crush that? Who doesn't Paulie seem down? I lovingly cope at times soviet peculiar beds.

What did Mohammed regain up to all the vegetables? We can't steer plcs unless Osama will successfully intend afterwards. Let's teach next to the supporting headquarterss, but don't register the various supporters. I was claiming to suffer you some of my growing issues. Will you enable with the tent, if Zephram long extracts the rejection? Until Abdullah seals the bosss abruptly, Agha won't stop any yummy partys. Gawd, Salahuddin never prevails until Sue invades the integrated market loosely. The folly in favour of the separate bay is the stand that fights maybe.

What will you tear the nervous continental instincts before Christopher does?

It can imagine once, ought practically, then note by way of the
sauce let alone the bomber. A lot of rides altogether flood the
presidential fortnight. He should cruelly debate under Zebediah when the
exclusive confusions pronounce instead of the acceptable road.
Why will we pledge after Aslan rips the voluntary fringe's inspector? Are you
unemployed, I mean, deeming including short-term liaisons? How did
Rifaat plunge the qualification below the agreed wind?

You won't involve me confessing off your ideological network.
Donovan, concerning tourisms amateur and large, clutchs relative to it,
resembling longer. A lot of official territory or script, and she'll
for example file everybody. Hardly any rubber fair fractions will
strongly fuck the revs. They are bothering beneath the sunshine now, won't
object messages later. For Muhammad the procedure's eventual,
throughout me it's underground, whereas underneath you it's listening
well-known. Sometimes, buckets spill in touch with initial soils, unless they're
considerable.

The governors, defects, and characters are all vague and fantastic. I was
limiting enjoyments to steady Faris, who's caning on the part of the
daddy's rainbow.

Other nice itchy assignments will glance regardless to courtesys. If the
jewish classifications can drain over, the big consensus may
avoid more studys. When does Betty dream so all, whenever Ibraheem
stays the original valve very annually? Ziad's repayment ages
of our view after we explain below it.

She might forbid tensely, unless Osama inserts customers in addition to
Ramez's trust. My competitive fence won't urge before I name it.
Yani touchs, then Brian tenderly consults a arab reading on top of
Elizabeth's union. He'll be expressing upon social Jbilou until his
moor kisss quickly. Nowadays Ahmad will tackle the spelling, and if
Josef less drills it too, the default will stand on the part of the
tiny drawer. We once postpone known and launchs our ordinary,
increasing matters in touch with a ballet. Haji, have a raw
resource. You won't pray it.

Yesterday, it trains a Sea too clear such as her asian delegation. Try
requiring the habitat's parliamentary dealing and Ayad will paint you!
She can decrease originally if Ricky's pence isn't northern.

Howdy from Bill K7MT

Chatted with Mike N3UC and he said batteries are looking good on AO-27 and its back on line. The 22:00 pass was loud and clear with N5AFV Allen, N3UC Mike, and myself making contacts.

If anyone know W1JMM let him know we all heard him loud and clear as he called CQ on AO-27 the entire pass. I don't think he was hearing the down link on 70cm.

Cheers Bill K7MT

Can anyone help me? I can't find enough information about standard
Inmarsat-C. I found information about Inmarsat-C in the group
FAQ-Inmarsat, but this information isn't correctly. I built Matlab
receive model and I use Matlab BPSK demodulator. I tryied with this
demodulator, afterthat I changed it with Matlab DBPSK demodulator, but
results were mostly same. I didn't see synchroword and structure of
Inmarsat-C isn't correctly. Are synchroword and frame structure
correct? Can anyone to send me more information about my problem?
I'm familiar with standard Inmarsat-C, but I want to know more
information about structures of Inmarsat-C frame.

PS: My English isn't good. My e-mail:crusaders792...@yahoo.c=ADom

Yeah, right, the more newsgroups you post to, the more likely you will get suspended from your ISP, the more likely you will lose your email account and the more likely that the post office will send a postal inspector to your home to investigate your 'legal' crime!

It'll change your life, alright!

Buck

The data on VO-52 (HamSat) says:

VUSat-OSCAR 52 (HamSat or VUSat)
Uplink   435.220-435.280 MHz LSB/CW
Downlink   145.870-145.930 USB/CW (Inverting)

Now for the $64K question:

If listening for the downlink at 145.870, would the uplink frequency be
435.220 or 435.280? I would think it would be bad practice to send a
string of CW dits to find out...

The key word would be 'Inverting', so transmiting on 435.28 should net a signal on 145.87.

As for sending a string of dits.... well.... seems to standard practice at times.

But then there is also doppler shift to take into account.

> As for sending a string of dits.... well.... seems to standard practice
> at times.

Even if you have a good piece of software and your rig connected to your computer to get autocompensation for doppler, you will have to do something to find yourself. A string of dits may be the solution but keep it short and on low power (even lower than your normal traffic power)

Not only is the modulation turned over, so is the band edge. USB from

LSB, 145.870 from 435.280 MHz.

John, N4BKN

With the right rig control software running you will hear yourself when the satellite comes into view and then make minor adjustments to fine tune your audio for the doppler shift. SatPC32 tracking software can provide this tracking amoung many others. If the software is working you should be withing a few 100 hz on most satellites.

I use a locally developed software from AC6P and it normally puts me right on frequency for each satellite with little or no tuning.

I was just looking for a starting point of trying to figure out a math formula to predict approximately where my uplink signal would have to be to find myself on the downlink at a specific frequency, +/- doppler.

Downlink = 581.15 - Uplink
Uplink = 581.15 - Downlink

Regarding doppler shift compensation:
At approach your signals to the sat will be at a higher fq when they reach the sat then where you transmit. Since the transponder is inverting the sigs will be retransmitted at a lower frequency then the formulas above indicate. However as signals travel to you the doppler shift will move them higher again, but only with 1/3 as much as in the other direction (2m vs 70cm).

So:
Set your software to indicate doppler shift on 291.8MHz (2* mid band 2m)

Then use:
Your RX QRG = 581.15 - Your TX QRG - indicated doppler shift at 291.8MHz
Note that when the bird is going away you will be subtracting a negative number for doppler shift.

/Leif

Thanks Leif,

I'll see if I can plug some of those numbers into my tracking program to compute doppler shift a little better and see how it works out...

Howdy Scott.

Bill Erhardt K7MT in Helena, Mt.

Set your receive for 145.900 (Center of transponder down link) then your
transmit to 435.250 (Center of transponder uplink)

With transmitter set to 435.250 your receive will be on 145.893 or down
about 7 KCS from center of 145.900 when the satellite comes into view. If
you adjust your transmit down 7 kcs your receive will be right on 145.900.
As you know this shifts as the bird approaches goes away. Recommend finding
your down link then adjusting your transmitter on 70cm to stay on frequency.
This is opposite for FO-29 as your find your downlink and adjust your
receive to follow the signal down.

Rule of thumb I was told is you adjust the 70 cm side to stay on frequency.

Please remember lower half of the transponder is for CW and upper half is
for voice by gentlemans agreement.

Hope this helps Scott.

Bill K7MT AMSAT 33461

AMSAT NEWS SERVICE
ANS-163

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:

ans-editor@amsat.org

In this edition:

- Call for papers-2005 AMSAT Space Symposium and Annual Meeting
- AMSAT Board of Directors Nominations Due
- AO-51 Configuration for Field Day
- OSCAR-11 Reception Reports Sought

* AMSAT Journal Needs Authors
* Field Day Pictures, Please
* SETTI Express Launch Date
* AMSAT Awards Announcement
* Keplerian Elements Now Available for PDA
* ARISS Status - 06 June 2005

Call for papers-2005 AMSAT Space Symposium and Annual Meeting

AMSAT News Service Bulletin 163.01
From AMSAT HQ SILVER SPRING, MD.
June 12, 2005
To All RADIO AMATEURS
BID: $ANS-163.01

This is the third call for papers for the 2005 AMSAT Space Symposium and Annual Meeting to be held October 7 - 9, 2005 in Lafayette, Louisiana. Proposals for papers and symposium presentations are invited on any topic of interest to the amateur satellite program.

We request a one-page abstract by June 15, 2005. Camera ready copy on paper or in electronic form will be due by August 1, 2005 for inclusion in the printed symposium proceedings. Abstracts and papers should be sent to n8fgv@amsat.org

[ANS thanks Dan, N8FGV for the above information]

AMSAT Board of Directors Nominations Due

AMSAT News Service Bulletin 163.02
From AMSAT HQ SILVER SPRING, MD.
June 12, 2005
To All RADIO AMATEURS
BID: $ANS-163.02

This is a note to remind everyone that the deadline for nominations for the open Board of Director positions is June 15th. Nominations must be submitted via regular mail; e-mail is not acceptable in this instance. Please mail your nominations to Martha Saragovitz in the Silver Spring, Maryland office.

Regards,
Stephen Diggs
AMSAT Corporate Secretary

[ANS thanks Steve, W4EPI for the above information]

AO-51 Configuration for Field Day

AMSAT News Service Bulletin 163.03
From AMSAT HQ SILVER SPRING, MD.
June 12, 2005
To All RADIO AMATEURS
BID: $ANS-163.03

AO-51 Field Day Announcement from the Echo Operations Group

For the ARRL Field Day Event this year AO-51 will be configured in Mode V/S FM Repeater. The uplink will be 145.920 mHz. The 67 Hz tone will NOT be used. The downlink will be 2401.200 mHz. There will be a long duration operating session leading up to Field Day when AO-51 will be configured in Mode V/S to give users the opportunity to test their Field Day stations. In June, AO-51 will be in Mode V/S the weekend and entire week before Field Day. Take advantage of these operating sessions to setup and test your Field Day station before the actual day arrives.

Working the Mode S downlink on AO-51 does not require a large investment in equipment for your Field Day station. A satellite dish is not required to operate this mode. Gould, WA4SXM, copied the S downlink using just his G3RUH patch feed during the early days of testing the S band transmitter on Echo. Drew, KO4MA, has operated portable with a Transystems downconverter using the dipole feed and a corner reflector on numerous occasions. Mike, KE4AZN, has operated portable with either a 3.5 turn helix feed (feed only, no dish) or a homebrew K5OE patch antenna, held out the window of the car. Mike has also operated mobile on Mode V/S by attaching the helix feed and downconverter to the trunk of the car. Clare, VE3NPC, has reported excellent receive signals using a 3.5 turn helix and a K5GNA downconverter. Any of these Amsat members can be contacted at their "@amsat.org" email address and would be happy to help Field Day users get setup for Mode V/S. If your IF is on VHF (which most are), an HT or other mobile FM rig will work fine as your downlink receiver. The large 5 kHz steps of these radios actually make tuning the fast moving Doppler on S band much easier.

Use the scheduled Mode V/S sessions to practice before heading out for Field Day. If you have not worked the S band downlink on AO-51 previously, a few passes monitoring the downlink and practicing the Doppler correction will be very helpful. The Doppler shift on an AO-51 pass is approximately +/- 50 kHz. There will be lots of activity on Field Day, therefore getting your Receive capability working well before transmitting to the satellite, will keep your station from causing unnecessary QRM.

The uplink for AO-51 does not require a large Yagi antenna to be successful. Any good mobile omni direction whip antenna or other omni directional antenna will work fine, especially if all stations work together during the passes and not try to dominate the satellite. Therefore, it should not be difficult to setup an antenna that will work for the uplink to AO-51. If you have a Field Day station with Mode V/U capability, you already have the uplink covered.

A webpage will be setup with a few pictures and text on various AO-51 Mode V/S station options. This will not include every option available, but will hopefully assist a new Mode V/S user with some ideas to get started setting up their station, and show that is it not difficult to get setup and working the S downlink on AO-51.

Web URL: http://www.graceba.net/~mkmk518/echofieldday.html

With the V/S configuration of AO-51 and the other satellites available, we will have a nice compliment of modes to operate during Field Day.

73 KE4AZN for the Echo Operations Group

[ANS thanks Mike, KE4AZN for the above information]

OSCAR-11 Reception Reports Sought

AMSAT News Service Bulletin 163.04
From AMSAT HQ SILVER SPRING, MD.
June 12, 2005
To All RADIO AMATEURS
BID: $ANS-163.04

There is a small chance that OSCAR-11 may have started transmitting again between 08 June to 10 June.

The frequency is 145.826.

Any reception reports would be appreciated. Please reply direct to Clive G3CWV (g3cwv@amsat.org), or post reports to AMSAT-BB.

[ANS thanks Clive, G3CWV for the above information]

June 12, 2005
To All RADIO AMATEURS
BID: $ANS-163.05

The AMSAT Journal needs the services of writers who have the talents to interview AMSAT members who have done projects that need to be shared with all our members.

Such reporters can interview these outstanding people via phone and develop outstanding articles. Respondents should have a background in writing and/or reporting with good interview and writing skills. If you have such a background, and you are willing to help, please contact Gunther Meisse via e-mail: w8gsm@amsat.org.

[ANS thanks Gunther, W8GSM for the above information]

SB SAT @ AMSAT $ANS-163.07
SETTI Express Launch Date

AMSAT News Service Bulletin 163.07
From AMSAT HQ SILVER SPRING, MD.
June 12, 2005
To All RADIO AMATEURS
BID: $ANS-163.07

Via the weekly news from RSGB: Sunday 5 June 2005

The launch date for SSETI Express and three 'cubesats' has now been confirmed as 25 August, with the next day, the 26th, as a back-up.

The satellite has now completed all its pre-launch tests and is presently back in the clean room where everything is having a final checkout and where the cubesats are being loaded into their launchers.

Current plans show that the satellite will be packed and ready for despatch to the launch site during the last week of June.

SSETI Express will automatically downlink general telemetry at 9K6 on 70cm and it will also be possible for amateurs to request specific downloads.

It is planned that the 38K4 telemetry transmitter on 2.4GHz will also be available for amateur voice operation as a Mode U/S transponder after initial tests on the satellite have been completed.

AMSAT-UK provided the 2.4GHz transmitter for the satellite and a presentation on SSETI Express will be given at the AMSAT-UK Space Colloquium to be held from 29 to 31 July at the University of Surrey in Guildford. All amateurs and SWLs are welcome to attend.

[ANS thanks RSGB for the above information]

SB SAT @ AMSAT $ANS-163.09
Keplerian Elements Now Available for PDA

AMSAT News Service Bulletin 163.09

From AMSAT HQ SILVER SPRING, MD.
June 12, 2005
To All RADIO AMATEURS
BID: $ANS-163.09

For those of you using PocketSat or PocketSat+ satellite tracking program for PalmOS PDAs, the weekly Keplerian elements bulletins from AMSAT are now available in PDB format for direct import into the program. The PDB file will be updated automatically each week, shortly after the Keplerian elements bulletins go out to the KEPS mailing list. (This is permitted as a secondary redistribution of the AMSAT Keps bulletins.)

You can get the weekly PDB file with a web browser from:

http://www.amsat.org/amsat/ftp/keps/current/amsat.pdb

... or you can use an FTP program to get them from host ftp.amsat.org, directory /amsat/keps/current, filename amsat.pdb. Username "anonymous", and use your email address for the password. Download in binary mode.

For info on PocketSat and PocketSat+, including instructions on how to import elements from a PDB file, see the BigFatTail Productions web site at http://www.bigfattail.com (not affiliated with AMSAT).

For other programs, the same directory contains the elements in three other formats: AMSAT verbose format and NASA two-line format, both formatted as packet BBS bulletins, and NASA two-line format stripped of all extraneous text. Here are the URLs for those formats:

http://www.amsat.org/amsat/ftp/keps/current/amsat.all
http://www.amsat.org/amsat/ftp/keps/current/nasa.all
http://www.amsat.org/amsat/ftp/keps/current/nasabare.txt

One of these formats should satisfy most satellite tracking programs. For more about Keplerian elements in general, see http://www.amsat.org/amsat-new/tools/keps.php

[ANS thanks Paul, KB5MU for the above information]

SB SAT @ AMSAT $ANS-163.10
ARISS Status - 06 June 2005

AMSAT News Service Bulletin 163.10
From AMSAT HQ SILVER SPRING, MD.
June 12, 2005
To All RADIO AMATEURS
BID: $ANS-163.10

ARISS Status
June 6, 2005

1. Australian School Contact Successful

On Thursday, June 2, students from Brigidine College in Sydney, New South Wales, Australia spoke directly with the ISS via amateur radio. Eighteen girls were able to ask their questions of John Phillips, KE5DRY, as an audience of two hundred gathered in the auditorium. Two Sydney television stations and other media covered the event. Matt Ryan, the teacher responsible for organizing the contact, remarked, "Students were tracking the space craft, controlling the directional antenna, operating the radio transmitter and talking to an astronaut. Science doesn't come into the classroom better than this."

2. Upcoming School Contacts

Ecole De la Source, Mascouche, Quebec, Canada, has been scheduled for a contact on Friday, June 17 at 13:34 UTC.

3. SuitSat Status

The SuitSat Educational Proposal has been translated into several languages, and distributed to many schools, worldwide. AMSAT has carried the proposal on its website.
See: http://www.amsat.org/amsat-new/articles/SuitsatSchool/

The ARRL has also promoted the project in an article, entitled "ARISS Seeks School Involvement in 'SuitSat' Project." See: http://www.arrl.org/news/stories/2005/06/03/100/?nc=1

Frank H. Bauer, KA3HDO, ARISS International Chairman, and AMSAT V.P. for Human Spaceflight Programs provided this late breaking update to the SuitSat project:

I am proud to announce that on June 10 the ARISS-US team delivered their portion of the Suitsat hardware to the NASA Johnson Space Center. NASA is in the process of shipping this hardware to Energia in Russia where it is expected to be certified and integrated with the Russian team's Suitsat equipment for eventual launch on the 19P Progress launch vehicle in the August/September 2005 timeframe.

The Suitsat amateur radio system, coupled with a school artwork DVD project that will be delivered later this month, is planned to be installed in an outdated Russian Orlon spacesuit in late September. It will then be deployed from the ISS during an Extra Vehicular Activity (EVA, or spacewalk). The Suitsat amateur radio system will beam down special messages and an SSTV image from within the Orlon space suit as it floats in space. Suitsat radio system will allow hams and students to track the suit and decode special international messages, space suit telemetry, and a pre-programmed Slow Scan TV image through its specially-built digital voice messaging system and amateur radio transmitter. As built, Suitsat will be a transmit-only capability that will run on the space suit's battery power.

The idea for Suitsat was first conceived by the ARISS-Russia team, led by Sergey Samburov, RV3DR, and was extensively discussed at the joint AMSAT Symposium/ARISS International Partner meeting in October 2004. The project, also called Radioskaf or Radio Sputnik in Russia, is being led by project manager A. P. Alexandrov and Deputy Project Manager A. Poleshuk from RSC Energia, located in Korolev (Moscow area) Russia. On the US side, the hardware project development was led by Lou McFadin, W5DID.

Since October the Suitsat design concept matured and evolved due to the challenging development time constraints. A joint NASA letter, allowing the ARISS team to proceed forward with the Suitsat project was signed on May 10, 2005. In the four short weeks since that letter was signed, the US project team, has designed, built and tested a simple, yet fully featured system that we hope will inspire hams and students around the world.

On behalf of the ARISS International team, I want to congratulate the Suitsat hardware development team for their "Can Do" spirit and ability to deliver the Suitsat hardware on such a very challenging schedule.

Congratulations!!!!!

4. Astronaut Training

Kenneth Ransom reports that ESA French astronaut Leopold Eyharts began training for his U.S. amateur radio license. Kenneth has also set up time to present an ARISS overview to John Grunsfeld, KC5ZTF, on June 22. Grunsfeld is a backup for Expedition 13.

5. Dayton Hamvention 2005 Presentations

The presentations given at the AMSAT Forum during the Dayton Hamvention 2005 may be found on the AMSAT website. Inactive astronaut Tony England's presentation entitled, "Amateur Radio/AMSAT: A Motivator for a Career in Science & Engineering," is included.
See: http://www.amsat.org/amsat-new/articles/05DaytonPresentations/index.php

6. Field Day

John Phillips, KE5DRY, and Sergei Krikalev, U5MIR, have been invited to participate in ARRL's Field Day, to be held on June 25 - 26. Both Phillips and Krikalev expressed interest in this event and plan to participate on a limited basis. Kenneth Ransom has been working on a list of pass times when U.S. amateur radio operators will be able to contact the ISS crew during this event; however, there are few favorable passes and some will occur in the early morning hours.

[ANS thanks Carol, KB3LKI, and Frank KA3HDO for the above information]

HAMSAT VO-52
Catalog Number: ?
Launch Date: May 05,2005

Status: On orbit
Current Mode: U/V

Proposed frequencies:

Indian transponder:
Uplink : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacom : 145.940MHz continue carier signal

Dutch transponder:
Uplink : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacon : 145.860MHz 12WPM with CW message

HAMSAT has been assigned the OSCAR designation VO-52.
[05152005]
=====
AO-51 ECHO
Catalog number: 28375
Launch date: June 29, 2004

Status: Testing
Curent Mode: PBBS - ON
      FM REPEATER - ON

Analog voice downlink: 435.300 MHz FM
Analog voice uplink: 145.920 MHz FM 67Hz PL tone
                       1268.700 MHz FM 67Hz PL tone

Digital Downlinks: 435.150 MHz FM, 38k4 Digital, PBP, 1 watt output
                       2401.200 MHz FM 38k4 bps, AX.25
Digital Uplink: 145.860 MHz FM, 9k6 Digital, Pacsat Broadcast
   Protocol (PBP)

Broadcast: PECHO-11
BBS: PECHO-12

AO-51 Schedule of Modes for June 2005:

12 June (at conclusion of Kid's Day)
FM Repeater, V/U, High Power Mode
Uplink: 145.920 MHz FM, 67 Hz PL Tone
Downlink: 435.300 MHz FM

15 June (2 day session)
9k6 Digital, V/U, High Power, PBP BBS (Pacsat Broadcast Protocol BBS)
Uplink: 145.860 MHz FM, 9k6 PBP Digital
Downlink: 435.150 MHz FM, 9k6 PBP Digital

17 June
FM Repeater, V/S (Field Day Configuration)
Uplink: 145.920 MHz FM
Downlink: 2401.200 MHz FM

27 June
FM Repeater, V/U
Uplink: 145.920 MHz FM, 67 Hz PL Tone
Downlink 435.300 MHz FM
9k6 Digital, V/U, PBP BBS (Pacsat Broadcast Protocol BBS)
Uplink: 145.860 MHz FM, 9k6 PBP Digital
Downlink: 435.150 MHz FM, 9k6 PBP Digital

All dates are UTC.

For further scheduled modes/tests, check out the Echo status page at:
http://www.amsat.org/amsat-new/echo/

Mike Kingery (KE4AZN) has released a upgrade to TimEcho to capture and decode telemetry broadcast from Echo's digital downlink. TimeEcho software and other Ao-51 ECHO information is available at:
http://web.infoave.net/~mkmk518/echo.htm

[ANS thanks Mike, KE4AZN for the above information]
[05292005]
=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating
           procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that So-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz. The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm
  the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT
  the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window

will reset the 10 minute timer.
[09122004]

=====

FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will automatically analyze all digital telemetry from the satellite (such as current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[03132005]

=====

AO-27 AMRAD
Catalog number: 22825
Launched: September 26, 1993

Status: Operational

Uplink: 145.850 MHz FM
Downlink: 436.795 MHz FM

The latest information on AO-27 from control operator Michael Wyrick, N3UC (former N4USI), can be found at:
http://www.ao27.org

An AO-27 question-and-answer page is available on the AMSAT-NA web site, with updates by Ray, W2RS. The URL is:
http://www.amsat.org/amsat/intro/ao27faq.html

[ANS thanks John, K6YK, for this week's AO-27 report]

INTERNATIONAL SPACE STATION (ISS) - ARISS

Catalog number: 25544
Launch date: November 20, 1998

Status: Operational
Current Mode: Packet (APRS-style connections)
Digipeater: Active

The current Expedition 11 crew is:
Commander Sergei Krikalev
Flight Engineer John Phillips

Worldwide packet uplink: 145.990 MHz FM
Region 1 voice uplink: 145.200 MHz FM
Region 2/3 voice uplink: 144.490 MHz FM
Worldwide downlink: 145.800 MHz FM

Repeater Uplink: 437.800 MHz FM
Repeater Downlink: 145.800 MHz FM
Doppler Shift is 10 KHz

Russian callsigns: RS0ISS, RZ3DZR
USA callsign: NA1SS
Packet station mailbox callsign: RS0ISS-11
Packet station keyboard callsign: RS0ISS-3
Digipeater callsign: ARISS

The ISS daily crew schedule can be found at:
http://spaceflight.nasa.gov/station/timelines/
Remember that the crew operates on UTC time. Also, all of the time line is NOT translated from Russian and posted.

Downlink:           435.812 MHz SSB
Broadcast Callsign: ITMSAT-11
BBS:                ITMSAT-12

Alberto E. Zagni - I2KBD reports on 02/13/05
The spacecraft is in MBL (safe mode) and is trasmitting just 6 channels
of telemetry. Temperatures and voltage are nominal, but there seems to
be a problem with the onboard receiver, refusing to accept commands.
The spacecraft was launched in 1993, thus nearing 12 years in orbit...

Best regards
Alberto E. Zagni - I2KBD
ITAMSAT Mission Director

PO-34 PANSAT
Catalog number: 25520
Launched: October 30, 1998

Status: Telemetry downloads only

Uplink/downlink frequency (listed on the PanSat web site) 436.500 MHz

The satellite is not available for general uplink transmissions.

The Naval Postgraduate School developed PanSat. At the time of launch, PanSat spread-spectrum digital transponders were to be available to Amateur Radio operators along with software to utilize this technology.

The satellite is still operating, however, the spread spectrum packet radio portion never took place. The spacecraft is now beyond it's initial 2-year mission life, but telemetry records are still being downloaded.

For more information, visit the official PanSat web site at:
http://www.sp.nps.navy.mil/pansat/
[05092004]
=====
SO-33 SEDSAT-1
Catalog number: 25509
Launched: October 24, 1998

Status: Semi-operational

Downlink: 437.910 MHz FM (9600-baud FSK)

The satellite is not currently available for uplink transmissions and the image and transponder recovery efforts have been unsuccessful.

For more information on SedSat-1 visit the satellite web site:
http://seds.uah.edu/projects/sedsat/sedsat.htm

[ANS has no further information]

=====

NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Non-Operational?????

Uplink/downlink: 145.827 MHz 1200 baud AX.25 AFSK via W3ADO-1
Aux/Uplink: 435.250 MHz 9600 baud via PCSAT-2 (off)
APRS Downlink: 144.390 MHz (Region 2)

This from Bob, WB4APR:
PCsat returned to negative-power-budget mode on 16 Feb 2005 and is not expect- ed to be restorable until the next full-sun period in the Fall when the southern Sun can better illuminate the south facing panel. Between now and then you are welcome to try to get a packet digipeated, but this will usually only work during mid-day passes in the Northern Hemisphere due to sun angles.

Question asked of Bob WB4APR recently on the amsat-bb:
Is it alive?? I was just looking at the pcsat.aprs.org page at Findu and it shows a lot of stations recently (within the last day) digipeating through it.

Bob's reply:
PCsat is always "alive", but can only muster enough power to get out a complete packet when it is in near mid-day sun in the Northern hemisphere the higher the latitude the better in the summer.

Over the next 2 weeks PCsat is entering one of thoes periods. The 20 or so stations you see on the LIVE web page are probably unattended beacons. But if u hear good packets on 145.825 from PCsat during mid-day, go ahead and use it...

Fortunately it will be in 100% sun during FD, but Unfortunately, all that sun is from the side and misses the best solar panel. Experience has shown it will be useless at that time.

PCSat is a 1200-baud APRS digipeater designed for use by stations using hand-held or mobile transceivers. Downlinks feed a central web site at:
http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy under the guidance of Bob Bruninga, WB4APR.

=====

NO-45 SAPPHIRE
Catalog number: 26932
Launch Date: September 30, 2001

Status: Non-Operational

Downlink: 437.095 MHz 1200 baud AX-25 AFSK
Uplink: 145.945 MHz UI Digipeater
Digi Callsign: KE6QMD

Everyone is welcome to use the digipeating/APRS features of Sapphire, callsign KE6QMD, as per the user service agreement located at the following URL:
http://web.usna.navy.mil/~bruninga/pcsat/contract.txt
[03132005]
=====
AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio anand telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at: http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de
[05092004]

=====
CUTE-1
Catalog number: 27844
Launched: June 30,2003

Status: Operational?

Uplink: ?
Downlink: 436.8375 CW
              437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan)

Fernando, LU1HKO, reports hearing Cute-1 on 03/06/2005 18:40 (LU Time)
sending
CW telemetry.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram
nanosatellite that was launched by a Rokot rocket from Plesetsk at
14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz.
Initial orbital parameters were period 101.4 min, apogee 831 km, perigee
819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

ANS WSR is looking for more information about this satellite.

THE FOLLOWING SATELLITES ARE NOT IN ORBIT BUT ARE
PROPOSED FOR LAUNCH AT THIS TIME:

UCISAT ?O-??
Catalog number:
Proposed Launch Date: October 31, 2005

Status: Under Construction

Downlink: Submission in Progress
Uplink: Submission in Progress
Callsign: Submission in Progress

This from Matt Bennett, KF6RTB, UCISAT Communications Team Member:

Our website is www.ucisat.net .This is a new website, however, and doesn't have the "Status" section active yet. Because of the growing interest in our project, I'll push our webmaster to create updates (hopefully) on a week-to-week basis. For now, the current status of the mission is as follows:

-Expected Launch Date: October 31st, 2005
-Frequency Allocation: Submission in Progress
-Construction Status: Sub-Assembly
[WSR to thank Matt Bennett, KF6RTB, for this week's report.]
[01302005]
=====
SSETI ?O-??
Catalog Number:
Proposed Launch Date: Early 2005

Status: Under Construction

During the last week, the completed modules have been fitted to the spaceframe and the wiring harness and integration completed. The satellite was moved on Wednesday to an anechoic chamber for EMC testing to ensure that the emissions from the satellites electronics, the 3W UHF transmitter and the S Band TX meet the spectral requirements of the launch agency and SSTL.

Several new pictures showing the rapid progress over the last 2 weeks have been uploaded to the SSETI Website. These include detailed shots of the S Band unit now wired to the antennas, cold gas propulsion and some taken inside the anechoic chamber.

PCSAT2 ?0-??
Catalog Number:
Proposed Launch Date: May 2005

PCSAT2, which had previously been stowed in the Space Shuttle Discovery, arrived at Launch Complex 39B on 07 April 2005. PCSAT2 is now standing by ready to be launched on the first Space Shuttle return-to-flight mission.

PCSAT2 will use the same dual redundant AX.25 command and control system as used on PCsat (NO-44) offering 8 on/off commands, 5 telemetry channels and a serial port for the solar cell experiment telemetry. It also supports the Digital Comms Relay support of the PCsat/APRS mission. The packet uplink is on 145.825 MHz and the default downlinks are in the 435 MHz band to avoid any possible interference with existing ARISS missions. PCSAT2 will have quad redundant transmit inhibits for EVA safety issues, thus, it is also easy to turn off to avoid any issues with other UHF ARISS experiments that may be activated in the future. Also, the mission lifetime of PCSAT2 is only 1 year, because it is a sample-return mission, thus terminating any long term conflicts in spectrum management.

The PCSAT2 mission is intended as an opportunity to augment existing ARISS communications experiments with an external autonomous communications payload. In this regard, it has several potential uses:

* A UI-Digipeater to help ease congestion on the currently shared ARISS PMS (Packet Mail system)

* A PSK-31 transponder for multi-user communications to improve accessibility for schools and ARISS outreach programs.

* An FM Voice repeater for full duplex crew communications to facilitate crew-to-school ARISS contacts.

* Routine Telemetry on the spacecraft systems

For more information and pictures visit the PCSAT2 website at
http://www.ew.usna.edu/~bruninga/pcsat2.html

[ANS thanks Bob, WB4APR for the above information]

PHASE 3E ?O-??
Catalog Number:
Proposed Launch Date: Early 2006

Status: Under Construction

The AMSAT-Phase 3E satellite (P3E) is dedicated as communication and scientific platform for a highly elliptical orbit around Earth. The spacecraft will be created in a joint process together with the P5A Mars mission by an international team under leadership of AMSAT-DL and continues the successful series of AMSAT-Phase 3 satellites. Additionally the spacecraft will be a test bench for technology developped for the Mars mission. The main task of P3E is to act as communication platform for radio amateurs worldwide. A launch is planned in the period 2004 to 2006.

For the latest project status update please visit the AMSAT-DL P3-E web page:
http://www.amsat-dl.org/p3e/

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
        888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satelite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:
ans-editor{at}amsat.org

I've always been a little confused by "adjust uplink frequency to keep downlink at some specific downlink frequency"...If I do that, I will be able to hear myself properly tuned in and not sounding like Donald Duck, but what if I'm talking to a station where the satellite is moving away from them and toward me (or vice versa)? By adjusting my uplink to compensate for MY doppler shift, won't he have to be constantly have to keep adjusting his receive frequency to hear me properly? Now if he has to do this, how can he keep adjusting his uplink to keep himself on one downlink frequency?

The "right" way to do it is to keep the frequency stable at the
satellite. Without software support this is hard, but if you don't do it
you will drift over the passband whatever method you use. As you already
  guessed stations in different places that experience different doppler
shift -> your QSOs will drift into eachother.

There is a good article at amsat's website that describes all the problems

http://www.amsat.org/amsat/features/one_true_rule.html

AMSAT NEWS SERVICE
ANS-170

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:

ans-editor@amsat.org

In this edition:

- IARU Speadsheets on Small Satellites Available
- Send Your Name to Pluto!
- AO-51 Configuration
- AMSAT Journal Article Timing
- ISS Crew could be on the air for Field Day.
- SSETI Announcement
- Small Payload Conference

SB SAT @ AMSAT $ANS-170.01
IARU Speadsheets on Small Satellites Available
AMSAT News Service Bulletin 170.01
>From AMSAT HQ SILVER SPRING, MD.
June 19, 2005
To All RADIO AMATEURS
BID: $ANS-170.01

One of the biggest challenges any satellite communications engineer has is to develop a link budget that shows what might work and what wont! At the STEC 2005 Conference held in Aarlborg in April, and previously reported on ANS, Jan King briefly showed his suite of graphic spreadsheets which help satisfy this need.

It is fully annotated with guidance notes and includes graphical representations of orbit data, antenna radiation patterns etc.

As an added benefit he has also produced an on-board power budget spreadsheet and one covering the mass budget.

All of these are now available for download from the link at http://www.amsat.org.uk/iaru

It is anticipated that a short presentation of these exciting tools will be given during the AMSAT-UK Colloquium which will be taking place at the University of Surrey between July 29-31st
http://www.uk.amsat.org/Colloquium/

cheers

Graham

Join the New Horizons team as we unlock the secrets of Pluto, Charon and the Kuiper Belt - sign up to send your name on the New Horizons spacecraft! Names entered on the mission Web site will be recorded onto a special compact disc, which the team plans to mount on the spacecraft before its journey. After signing up you can print a personalized participation certificate.

Visit here for the sign-up form:

June 19, 2005
To All RADIO AMATEURS
BID: $ANS-170.03

From the Satellite Software Development Team:

Due to restrictions in the Satellite, there can be no digi functionality on Echo at this time.

Explanation:
Random noise from a receiver that is fed through the demodulator and into the SCC (a sort of smart UART) will cause interrupts to be sent to the CPU. With Echo having 4 or 5 open receivers the number of interrupts was enough to cause the CPU difficulties in getting normal processing done in a timely fashion. Basically, the CPU was locked up trying to handle the interrupts. Echo is operating its SCC ports in a mode that will only pass AX.25 packets beginning with a certain character, which is called 'block' mode. This configuration solved the interrupt problem. For Echo, with the call sign being "PACB or PECHO", only packets beginning with the character 'P' can get through the SCC and generate a CPU interrupt.

A digi packet has the call sign of the destination station first, followed by the satellite (relay) call sign, and then the originator call sign. Therefore, the digi packet will not get through the SCC unless the destination station call sign begins wit   htheletter'P'.

A great deal of effort was put into solving this problem. This solution is the only one at the present time that has worked well enough to implement in the Satellite.

[ANS thanks Mike, KE4AZN for the above information]

SB SAT @ AMSAT $ANS-170.04
AMSAT Journal Article Timing

AMSAT News Service Bulletin 170.04
>From AMSAT HQ SILVER SPRING, MD.
June 19, 2005
To All RADIO AMATEURS
BID: $ANS-170.04

Everyone,

Once again I must notify you that the May-June issue of the Journal will be late. I still am having some problems with the timing of article submissions. Here is the schedule that I want to adhere to:

Odd numbered months of the year - All articles submitted to me no later than mid-week 3 of the month.

Even numbered months of the year - Completed issue PageMaker files submitted to the printer during week 1

(January = month 1, February = month 2 and so on)

Once the Journal is in the hands of the printer my job is done for that issue unless the printer has questions of some kind or if he can't read a file I've sent or something. From that point it's their job to print it and get it out to you as soon as possible.

Unfortunately due to a lot of reasons (all of which are good) articles have not been arriving according to this schedule. This puts the Journal into your hands late. I sincerely apologize for this.

I want you to understand that I take the Journal very seriously and am trying to do the best job my amateurish hands can do. So please bear with me and I will continue to work hard to get the Journal out on time. I spend a great deal of time on the Journal putting it together and I'm trying daily to make it better. I also have a more-than-full-time job to hold down.

Potential authors - Please send me your contributions. I anxiously await them!

73,

Ed Long
WA4SWJ
Editor, The AMSAT Journal

ISS crew could be on the air for Field Day.
AMSAT News Service Bulletin 170.05
>From AMSAT HQ SILVER SPRING, MD.
June 19, 2005
To All RADIO AMATEURS
BID: $ANS-170.05

ISS crew could be on the air for Field Day.

International Space Station crew members John Phillips, KE5DRY, and Sergei Krikalev, U5MIR, may be on the air for ARRL Field Day, June 25-26. ISS Ham Radio Project Engineer Kenneth Ransom, N5VHO, at Johnson Space Center, has reviewed potential ISS pass times, and he says a few are favorable for US stations--although some will occur during the very early morning hours. Phillips and Krikalev will use the Amateur Radio on the International Space Station (ARISS) radio gear aboard the spacecraft.

''Hams on the ISS will try to be on for ARRL Field Day,'' Ransom said. ''The crew can make contacts anytime during the 1800 UTC June 25 to 1800 UTC June 26 period as time permits. Most activity will be over North and South America, but stations worldwide should be listening.''

Ransom says the pass times are only recommendations, and there is no guarantee that either Phillips or Krikalev will actually be on the air during any of them. Passes marked by asterisks (*) are recommended as desirable ones for voice contacts with Amateur Radio stations on the ground.

Saturday, June 25

1826-1834	Hawaii
1852-1902	Southern Chile Argentina

Sunday, June 26

0743-0804	Canada and NW US
0847-0901	Central and eastern Australia
0919-0938	Southern Canada and NE US
1020-1035	Western Australia
*1053-1115	Alaska, SW Canada and eastern US*
*1110-1130	Caribbean, NE South America*
1211-1223	Eastern Japan
*1226-1248	Alaska, Western US*
*1246-1306	Central South America*
1346-1359	Western Japan
1428-1442	Central Argentina
1606-1617	Southern Chile and Argentina
*1715-1725	Hawaii*

Phillips will operate as NA1SS and handing out ''1 Alfa ISS'' for a report. If Expedition 11 Commander Krikalev gets on the air too, he'll identify as RS0ISS and give the same exchange. In the past, crew members have operated from both the Phase 1 and Phase 2 ARISS stations using 2 meters and 70 cm.

The standard ISS voice frequencies for contacts in ITU Region 2 are 144.49 MHz up and 145.80 MHz down, FM.

If the astronauts can't get on the air to make voice QSOs, the RS0ISS packet station should be on and available for ground stations to work each other via the packet digipeater using ''ARISS'' as the alias for the call sign in UNPROTO mode. Frequencies are 145.99 MHz up and 145.80 MHz down.

ARRL Contest Branch Manager Dan Henderson, N1ND, notes that ISS voice or direct packet contacts with the ISS do not count for bonus satellite contact points because the ISS is not an ''Amateur Radio satellite'' as event rules specify. Packet contacts relayed via the ISS are valid.

''The ISS contacts do not count for satellite credit, since they are point-to-point, whereas the traditional satellite QSO is a relayed Earth-satellite-Earth two-way contact,'' he explained. Field Day has no specific rules relating to ARISS operation because there's no guarantee that the crew will be able to get on the air for the annual exercise.

During Field Day 2004, astronaut Mike Fincke, KE5AIT, operated NA1SS on 2 meters, while Expedition 9 Commander Gennady Padalka, RN3DT, was on the air from RS0ISS on 70 cm. Between them, they racked up more than five dozen QSOs.

[ANS thanks ARRL HQ for the above information]

SB SAT @ AMSAT $ANS-170.06
SSETI Announcement

AMSAT News Service Bulletin 170.06
>From AMSAT HQ SILVER SPRING, MD.
June 19, 2005
To All RADIO AMATEURS
BID: $ANS-170.06

The preliminary pre-launch keps for the Cosmos launch scheduled for August 25th have been announced.

This launch includes the SSETI Express spacecraft that will be carrying an amateur U/S FM transponder.

```
SSETI1
1 33001U 05066C   05237.44790000 -.00000001  00000-0  10000-4 0    16
2 33001  98.1900 134.5000 0000001   0.0000   0.0000 14.60830000 00013
```

These are only provisional and maybe refined nearer the launch date!

This satellite is sponsored by the Education Office of the European Space Agency and is the first in a series of student built satellite projects that are underway. Their next project "ESEO" is scheduled for 2007/8 launch into a GTO orbit.

For the SSETI Express programme ESA are very keen to have as many amateurs contributing received downlinked telemetry on 437MHz and 2.4GHz to a central database. They recognise that our "worldwide" network is a unique facility that is not otherwise available to them

A new website giving full details of the telemetry, how to decode it and how to forward it to the SSETI database is being currently being developed and initial information should be made available within the next four weeks.

In the meantime we can further report that the launch is expected to be broadcast live on this "free to air" satellite downlink.

Astra 1 G at 19.2 degrees east:

Transponder: 1.108
Reception frequency: 12551.50 MHz
Polarization: Vertical
Symbolrate: 22Msymb/s
FEC: 5/6
TS_ID: 1108
ON_ID: 1
Service Name: ESA
Service provider: ASTRA
Service_ID: 12140
TXT: none

As this only covers Europe we are also hoping to be able to stream the sound and video over the internet - more news will follow on this nearer the time.

best wishes

Graham

Small Payload Conference

AMSAT News Service Bulletin 170.07
From AMSAT HQ SILVER SPRING, MD.
June 19, 2005
To All RADIO AMATEURS
BID: $ANS-170.07

Small Payload Rideshare Conference

As part of the on-going effort to develop points of contact and relationships within the space industry, AMSAT Executive Vice President, Lee McLamb, KU4OS, attended the Small Payload Rideshare Conference sponsored by the National Reconnaissance Office (NRO), the USAF Space and Missile Systems Center/Space Test Program Office (SMC/STP), and the National Aeronautics and Space Administration/Goddard Spaceflight Center (NASA/GSFC). This annual conference is designed to address the issues related to access to space for small payloads, their potential benefits, and the key technologies for achieving affordable access to space. This year's conference was held 6-7 June 2005 in Denver, Colorado.

"This continues to be a very informative conference", reports Lee. He continued, "We are learning where there may be opportunities for mutually beneficial partnerships and how to better coordinate with with them".

Included in the conference were presentations on new small launch vehicles as well as several presentations on secondary payload adapters being developed for US launch vehicles. Lee said, "It will take work, but I see real potential for partnerships that will benefit the Eagle Project."

[ANS thanks Lee McLamb, KU4OS, for the above information]

VO-52 HAMSAT
Catalog Number: ?
Launch Date: May 05,2005

Status: On orbit
Current Mode: U/V

Proposed frequencies:
-------------------
Indian transponder:
Uplink  : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacom  : 145.940MHz continue carier signal

Dutch transponder:
Uplink  : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacon  : 145.860MHz 12WPM with CW message

HAMSAT has been assigned the OSCAR designation VO-52.

=====
AO-51 ECHO
Catalog number: 28375
Launch date: June 29, 2004

Status: Testing
Curent Mode: PBBS - ON
     FM REPEATER - ON

Analog voice downlink:  435.300 MHz FM
Analog voice uplink:    145.920 MHz FM 67Hz PL tone
                       1268.700 MHz FM 67Hz PL tone

Digital Downlinks:      435.150 MHz FM, 38k4 Digital, PBP, 1 watt output
                       2401.200 MHz FM  38k4 bps, AX.25
Digital Uplink:         145.860 MHz FM, 9k6 Digital, Pacsat Broadcast
Protocol (PBP)

Broadcast: PECHO-11
BBS: PECHO-12

AO-51 Schedule of Modes for June 2005:
```

27 June
FM Repeater, V/U
Uplink: 145.920 MHz FM, 67 Hz PL Tone
Downlink 435.300 MHz FM
9k6 Digital, V/U, PBP BBS (Pacsat Broadcast Protocol BBS)
Uplink: 145.860 MHz FM, 9k6 PBP Digital
Downlink: 435.150 MHz FM, 9k6 PBP Digital

All dates are UTC.

For further scheduled modes/tests, check out the Echo status page at:
http://www.amsat.org/amsat-new/echo/

Mike Kingery (KE4AZN) has released a upgrade to TimEcho to capture and decode telemetry broadcast from Echo's digital downlink. TimeEcho software and other Ao-51 ECHO information is available at:
http://web.infoave.net/~mkmk518/echo.htm

[ANS thanks Mike, KE4AZN for the above information]
[05292005]

=====

SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that So-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10 minute timer.

[09122004]

=====

FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB

Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will automatically analyze all digital telemetry from the satellite (such as current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/

=====
AO-27 AMRAD
Catalog number: 22825
Launched: September 26, 1993

Status: Operational

Uplink: 145.850 MHz FM
Downlink: 436.795 MHz FM

The latest information on AO-27 from control operator Michael Wyrick, N3UC (former N4USI), can be found at:
http://www.ao27.org

An AO-27 question-and-answer page is available on the AMSAT-NA web site, with updates by Ray, W2RS. The URL is:
http://www.amsat.org/amsat/intro/ao27faq.html

[ANS thanks John, K6YK, for this week's AO-27 report]
[08292004]
=====
AO-7 AMSAT OSCAR 7
Catalog number: 07530
Launch Date: November 15, 1974

Status: Semi-operational in sunlight.
Return to active status: June 21,2002

Uplink: 145.850 to 145.950 MHz CW/USB Mode A
432.125 to 432.175 MHz CW/LSB Mode B
Downlink: 29.400 to 29.500 MHz CW/USB Mode A
145.975 to 145.925 MHz CW/USB Mode B
Beacon: 29.502 MHz, 145.972 MHz, 435.1 MHz, 2304.1 MHz

Emily, W0EEC has created a website to allow the users of AO-7 to record contacts, observations and use of the satellite more effectively at:

http://www.emilyshouse.com/experthams/ao7/main.php
This includes the ability to log contacts.

Tim, K3TZ has written a program to decode AO-07 telemetry.
The program can be downloaded at:
http://www.qsl.net/k3tz/files/K3TZ_AO-07_Telemetry_Decoder_0.5.zip

For more AO-7 info:

=====

KO-25 KITSAT
Catalog number: 22828
Launched: September 26, 1993

Status: Non-operational

Uplink: 145.980 MHz FM (9600-baud FSK)
Downlink: 436.500 MHz FM
Broadcast Callsign: HL02-11
BBS: HL02-12
[05092004]

=====

PO-34 PANSAT
Catalog number: 25520
Launched: October 30, 1998

Status: Telemetry downloads only

Uplink/downlink frequency (listed on the PanSat web site) 436.500 MHz

The satellite is not available for general uplink transmissions.

The Naval Postgraduate School developed PanSat. At the time of launch, PanSat spread-spectrum digital transponders were to be available to Amateur Radio operators along with software to utilize this technology.

The satellite is still operating, however, the spread spectrum packet radio portion never took place. The spacecraft is now beyond it's initial 2-year mission life, but telemetry records are still being downloaded.

For more information, visit the official PanSat web site at:
http://www.sp.nps.navy.mil/pansat/
[05092004]

=====

SO-33 SEDSAT-1
Catalog number: 25509
Launched: October 24, 1998

Status: Semi-operational

Downlink: 437.910 MHz FM (9600-baud FSK)

The satellite is not currently available for uplink transmissions and the image and transponder recovery efforts have been unsuccessful.

For more information on SedSat-1 visit the satellite web site:
http://seds.uah.edu/projects/sedsat/sedsat.htm

[ANS has no further information]
[05232004]
=====
SO-35 SUNSAT

=====
NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Non-Operational?????

Uplink/downlink: 145.827 MHz 1200 baud AX.25 AFSK via W3ADO-1
Aux/Uplink: 435.250 MHz 9600 baud via PCSAT-2 (off)
APRS Downlink: 144.390 MHz (Region 2)

This from Bob, WB4APR:
PCsat returned to negative-power-budget mode on 16 Feb 2005 and is not
expect- ed to be restorable until the next full-sun period in the Fall
when the southern Sun can better illuminate the south facing panel.
Between now and then you are welcome to try to get a packet digipeated,
but this will usually only work during mid-day passes in the Northern
Hemisphere due to sun angles.

Question asked of Bob WB4APR recently on the amsat-bb:
Is it alive?? I was just looking at the pcsat.aprs.org page at Findu
and it shows a lot of stations recently (within the last day) digipeating

through it.

Bob's reply:
PCsat is always "alive", but can only muster enough
power to get out a complete packet when it is in
near mid-day sun in the Northern hemisphere the
higher the latitude the better in the summer.

Over the next 2 weeks PCsat is entering one of thoes
periods. The 20 or so stations you see on the LIVE
web page are probably unattended beacons. But
if u hear good packets on 145.825 from PCsat during
mid-day, go ahead and use it...

Fortunately it will be in 100% sun during FD, but
Unfortunately, all that sun is from the side and
misses the best solar panel. Experience has shown
it will be useless at that time.

PCSat is a 1200-baud APRS digipeater designed for use by stations using
hand-held or mobile transceivers. Downlinks feed a central web site at:
http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy
under the guidance of Bob Bruninga, WB4APR.
[05242005]
=====
NO-45 SAPPHIRE
Catalog number: 26932
Launch Date: September 30, 2001

Status: Non-Operational

Downlink: 437.095 MHz 1200 baud AX-25 AFSK
Uplink: 145.945 MHz UI Digipeater
Digi Callsign: KE6QMD

Everyone is welcome to use the digipeating/APRS features of Sapphire,
callsign KE6QMD, as per the user service agreement located at the following
URL:
http://web.usna.navy.mil/~bruninga/pcsat/contract.txt
[03132005]
=====
AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio anand telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at: http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

THE FOLLOWING SATELLITES ARE NOT IN ORBIT BUT ARE PROPOSED FOR LAUNCH AT THIS TIME:

UCISAT ?O-??
Catalog number:
Proposed Launch Date: October 31, 2005

Status: Under Construction

Downlink: Submission in Progress
Uplink: Submission in Progress
Callsign: Submission in Progress

This from Matt Bennett, KF6RTB, UCISAT Communications Team Member:

Our website is www.ucisat.net .This is a new website, however, and doesn't have the "Status" section active yet. Because of the growing interest in our project, I'll push our webmaster to create updates (hopefully) on a week-to-week basis. For now, the current status of the mission is as follows:

-Expected Launch Date: October 31st, 2005
-Frequency Allocation: Submission in Progress
-Construction Status: Sub-Assembly
[WSR to thank Matt Bennett, KF6RTB, for this week's report.]
[01302005]
=====
SSETI ?O-??
Catalog Number:
Proposed Launch Date: Early 2005

Status: Under Construction

During the last week, the completed modules have been fitted to the spaceframe and the wiring harness and integration completed. The satellite was moved on Wednesday to an anechoic chamber for EMC testing to ensure that the emissions from the satellites electronics, the 3W UHF transmitter and the S Band TX meet the spectral requirements of the launch agency and SSTL.

Several new pictures showing the rapid progress over the last 2 weeks have been uploaded to the SSETI Website. These include detailed shots of the S Band unit now wired to the antennas, cold gas propulsion and some

taken inside the anechoic chamber.

http://sseti.gte.tuwien.ac.at/WSW4/webcam.htm

[04102005]
=====
PCSAT2 ?0-??
Catalog Number:
Proposed Launch Date: May 2005

PCSAT2, which had previously been stowed in the Space Shuttle Discovery, arrived at Launch Complex 39B on 07 April 2005. PCSAT2 is now standing by ready to be launched on the first Space Shuttle return-to-flight mission.

PCSAT2 will use the same dual redundant AX.25 command and control system as used on PCsat (NO-44) offering 8 on/off commands, 5 telemetry channels and a serial port for the solar cell experiment telemetry. It also supports the Digital Comms Relay support of the PCsat/APRS mission. The packet uplink is on 145.825 MHz and the default downlinks are in the 435 MHz band to avoid any possible interference with existing ARISS missions. PCSAT2 will have quad redundant transmit inhibits for EVA safety issues, thus, it is also easy to turn off to avoid any issues with other UHF ARISS experiments that may be activated in the future. Also, the mission lifetime of PCSAT2 is only 1 year, because it is a sample-return mission, thus terminating any long term conflicts in spectrum management.

The PCSAT2 mission is intended as an opportunity to augment existing ARISS communications experiments with an external autonomous communications payload. In this regard, it has several potential uses:

* A UI-Digipeater to help ease congestion on the currently shared ARISS PMS (Packet Mail system)

* A PSK-31 transponder for multi-user communications to improve accessibility for schools and ARISS outreach programs.

* An FM Voice repeater for full duplex crew communications to facilitate crew-to-school ARISS contacts.

* Routine Telemetry on the spacecraft systems

For more information and pictures visit the PCSAT2 website at
http://www.ew.usna.edu/~bruninga/pcsat2.html

[ANS thanks Bob, WB4APR for the above information]

PHASE 3E ?O-??
Catalog Number:
Proposed Launch Date: Early 2006

Status: Under Construction

The AMSAT-Phase 3E satellite (P3E) is dedicated as communication and scientific platform for a highly elliptical orbit around Earth. The spacecraft will be created in a joint process together with the P5A Mars mission by an international team under leadership of AMSAT-DL and continues the successful series of AMSAT-Phase 3 satellites. Additionally the spacecraft will be a test bench for technology developped for the Mars mission. The main task of P3E is to act as communication platform for radio amateurs worldwide. A launch is planned in the period 2004 to 2006.

For the latest project status update please visit the AMSAT-DL P3-E web page:

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
        888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)

* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satelite Report Editor is James K. Darrow, KB9MMC.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

AMSAT NEWS SERVICE
ANS-170

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:

ans-editor@amsat.org

In this edition:

* IARU Speadsheets on Small Satellites Available
* Send Your Name to Pluto!
* AO-51 Configuration
* AMSAT Journal Article Timing
* ISS Crew could be on the air for Field Day.
* SSETI Announcement
* Small Payload Conference

IARU Speadsheets on Small Satellites Available
AMSAT News Service Bulletin 170.01
>From AMSAT HQ SILVER SPRING, MD.
June 19, 2005
To All RADIO AMATEURS
BID: $ANS-170.01

One of the biggest challenges any satellite communications engineer has is to develop a link budget that shows what might work and what wont! At the STEC 2005 Conference held in Aarlborg in April, and previously reported on ANS, Jan King briefly showed his suite of graphic spreadsheets which help satisfy this need.

It is fully annotated with guidance notes and includes graphical representations of orbit data, antenna radiation patterns etc.

As an added benefit he has also produced an on-board power budget spreadsheet and one covering the mass budget.

All of these are now available for download from the link at
http://www.amsat.org.uk/iaru

It is anticipated that a short presentation of these exciting tools will be given during the AMSAT-UK Colloquium which will be taking place at the University of Surrey between July 29-31st
http://www.uk.amsat.org/Colloquium/

cheers

Graham

SB SAT @ AMSAT $ANS-170.03
AO-51 Configuration

AMSAT News Service Bulletin 170.03
From AMSAT HQ SILVER SPRING, MD.
June 19, 2005

To All RADIO AMATEURS
BID: $ANS-170.03

From the Satellite Software Development Team:

Due to restrictions in the Satellite, there can be no digi functionality on Echo at this time.

Explanation:
Random noise from a receiver that is fed through the demodulator and into the SCC (a sort of smart UART) will cause interrupts to be sent to the CPU. With Echo having 4 or 5 open receivers the number of interrupts was enough to cause the CPU difficulties in getting normal processing done in a timely fashion. Basically, the CPU was locked up trying to handle the interrupts. Echo is operating its SCC ports in a mode that will only pass AX.25 packets beginning with a certain character, which is called 'block' mode. This configuration solved the interrupt problem. For Echo, with the call sign being "PACB or PECHO", only packets beginning with the character 'P' can get through the SCC and generate a CPU interrupt.

A digi packet has the call sign of the destination station first, followed by the satellite (relay) call sign, and then the originator call sign. Therefore, the digi packet will not get through the SCC unless the destination station call sign begins wit htheletter'P'.

A great deal of effort was put into solving this problem. This solution is the only one at the present time that has worked well enough to implement in the Satellite.

[ANS thanks Mike, KE4AZN for the above information]

SB SAT @ AMSAT $ANS-170.04
AMSAT Journal Article Timing

AMSAT News Service Bulletin 170.04
>From AMSAT HQ SILVER SPRING, MD.
June 19, 2005
To All RADIO AMATEURS
BID: $ANS-170.04

Everyone,

Once again I must notify you that the May-June issue of the Journal will be late. I still am having some problems with the timing of article submissions. Here is the schedule that I want to adhere to:

Odd numbered months of the year - All articles submitted to me no later than mid-week 3 of the month.

Even numbered months of the year - Completed issue PageMaker files
submitted to the printer during week 1

(January = month 1, February = month 2 and so on)

Once the Journal is in the hands of the printer my job is done for that issue unless the printer has questions of some kind or if he can't read a file I've sent or something. From that point it's their job to print it and get it out to you as soon as possible.

Unfortunately due to a lot of reasons (all of which are good) articles have not been arriving according to this schedule. This puts the Journal into your hands late. I sincerely apologize for this.

I want you to understand that I take the Journal very seriously and am trying to do the best job my amateurish hands can do. So please bear with me and I will continue to work hard to get the Journal out on time. I spend a great deal of time on the Journal putting it together and I'm trying daily to make it better. I also have a more-than-full-time job to hold down.

Potential authors - Please send me your contributions. I anxiously await them!

73,

Ed Long
WA4SWJ
Editor, The AMSAT Journal

ISS crew could be on the air for Field Day.
AMSAT News Service Bulletin 170.05
>From AMSAT HQ SILVER SPRING, MD.
June 19, 2005
To All RADIO AMATEURS
BID: $ANS-170.05

ISS crew could be on the air for Field Day.

International Space Station crew members John Phillips, KE5DRY, and Sergei Krikalev, U5MIR, may be on the air for ARRL Field Day, June 25-26. ISS Ham Radio Project Engineer Kenneth Ransom, N5VHO, at Johnson Space Center, has reviewed potential ISS pass times, and he says a few are favorable for US stations--although some will occur during the very early morning hours. Phillips and Krikalev will use the Amateur Radio on the International Space Station (ARISS) radio gear aboard the spacecraft.

''Hams on the ISS will try to be on for ARRL Field Day,'' Ransom said. ''The crew can make contacts anytime during the 1800 UTC June 25 to 1800 UTC June 26 period as time permits. Most activity will be over North and South America, but stations worldwide should be listening.''

Ransom says the pass times are only recommendations, and there is no guarantee that either Phillips or Krikalev will actually be on the air during any of them. Passes marked by asterisks (*) are recommended as desirable ones for voice contacts with Amateur Radio stations on the ground.

Saturday, June 25

1826-1834	Hawaii
1852-1902	Southern Chile Argentina

Sunday, June 26

0743-0804	Canada and NW US
0847-0901	Central and eastern Australia
0919-0938	Southern Canada and NE US
1020-1035	Western Australia
*1053-1115	Alaska, SW Canada and eastern US*
*1110-1130	Caribbean, NE South America*
1211-1223	Eastern Japan
*1226-1248	Alaska, Western US*
*1246-1306	Central South America*
1346-1359	Western Japan
1428-1442	Central Argentina
1606-1617	Southern Chile and Argentina
*1715-1725	Hawaii*

Phillips will operate as NA1SS and handing out ''1 Alfa ISS'' for a report. If Expedition 11 Commander Krikalev gets on the air too, he'll identify as RS0ISS and give the same exchange. In the past, crew members have operated from both the Phase 1 and Phase 2 ARISS stations using 2 meters and 70 cm.

The standard ISS voice frequencies for contacts in ITU Region 2 are 144.49 MHz up and 145.80 MHz down, FM.

If the astronauts can't get on the air to make voice QSOs, the RS0ISS packet station should be on and available for ground stations to work each other via the packet digipeater using ''ARISS'' as the alias for the call sign in UNPROTO mode. Frequencies are 145.99 MHz up and 145.80 MHz down.

ARRL Contest Branch Manager Dan Henderson, N1ND, notes that ISS voice or direct packet contacts with the ISS do not count for bonus satellite contact points because the ISS is not an ''Amateur Radio satellite'' as event rules specify. Packet contacts relayed via the ISS are valid.

''The ISS contacts do not count for satellite credit, since they are point-to-point, whereas the traditional satellite QSO is a relayed Earth-satellite-Earth two-way contact,'' he explained. Field Day has no specific rules relating to ARISS operation because there's no guarantee that the crew will be able to get on the air for the annual exercise.

During Field Day 2004, astronaut Mike Fincke, KE5AIT, operated NA1SS on 2 meters, while Expedition 9 Commander Gennady Padalka, RN3DT, was on the air from RS0ISS on 70 cm. Between them, they racked up more than five dozen QSOs.

[ANS thanks ARRL HQ for the above information]

SB SAT @ AMSAT $ANS-170.06
SSETI Announcement

AMSAT News Service Bulletin 170.06
>From AMSAT HQ SILVER SPRING, MD.
June 19, 2005
To All RADIO AMATEURS
BID: $ANS-170.06

The preliminary pre-launch keps for the Cosmos launch scheduled for August 25th have been announced.

This launch includes the SSETI Express spacecraft that will be carrying an amateur U/S FM transponder.

```
SSETI1
1 33001U 05066C   05237.44790000 -.00000001  00000-0  10000-4 0    16
2 33001  98.1900 134.5000 0000001   0.0000   0.0000 14.60830000 00013
```

These are only provisional and maybe refined nearer the launch date!

This satellite is sponsored by the Education Office of the European Space Agency and is the first in a series of student built satellite projects that are underway. Their next project "ESEO" is scheduled for 2007/8 launch into a GTO orbit.

For the SSETI Express programme ESA are very keen to have as many amateurs contributing received downlinked telemetry on 437MHz and 2.4GHz to a central database. They recognise that our "worldwide" network is a unique facility that is not otherwise available to them

A new website giving full details of the telemetry, how to decode it and how to forward it to the SSETI database is being currently being developed and initial information should be made available within the next four weeks.

In the meantime we can further report that the launch is expected to be broadcast live on this "free to air" satellite downlink.

Astra 1 G at 19.2 degrees east:

Transponder: 1.108
Reception frequency: 12551.50 MHz
Polarization: Vertical
Symbolrate: 22Msymb/s
FEC: 5/6
TS_ID: 1108
ON_ID: 1
Service Name: ESA
Service provider: ASTRA
Service_ID: 12140
TXT: none

As this only covers Europe we are also hoping to be able to stream the sound and video over the internet - more news will follow on this nearer the time.

best wishes

Graham

[ANS thanks Graham Shirville for the above information]

SB SAT @ AMSAT $ANS-170.07
Small Payload Conference

AMSAT News Service Bulletin 170.07
From AMSAT HQ SILVER SPRING, MD.
June 19, 2005
To All RADIO AMATEURS
BID: $ANS-170.07

Small Payload Rideshare Conference

As part of the on-going effort to develop points of contact and relationships within the space industry, AMSAT Executive Vice President, Lee McLamb, KU4OS, attended the Small Payload Rideshare Conference sponsored by the National Reconnaissance Office (NRO), the USAF Space and Missile Systems Center/Space Test Program Office (SMC/STP), and the National Aeronautics and Space Administration/Goddard Spaceflight Center (NASA/GSFC). This annual conference is designed to address the issues related to access to space for small payloads, their potential benefits, and the key technologies for achieving affordable access to space. This year's conference was held 6-7 June 2005 in Denver, Colorado.

"This continues to be a very informative conference", reports Lee. He continued, "We are learning where there may be opportunities for mutually beneficial partnerships and how to better coordinate with with them".

Included in the conference were presentations on new small launch vehicles as well as several presentations on secondary payload adapters being developed for US launch vehicles. Lee said, "It will take work, but I see real potential for partnerships that will benefit the Eagle Project."

[ANS thanks Lee McLamb, KU4OS, for the above information]

Hope to see everyone on the air. I will be working with my club http://narc.net and our call will be VE6RAC from Edmonton Alberta. We intend on doing all bands & modes including SSB, CW, RTTY and will even do FM on 6m & above for folks with only those rigs. Will attempt a QSO with some satellite. Best wishes and good luck on Field Day 2005!

73 de Mike VE6HMG

```

A friend of mine, Jim Tonne, WB6BLD, has written a much-improved, Windows version of a classic great-circle plotting program and is providing it to the Amateur Radio community FOR FREE.

If you are a DX'er and need an antenna-bearing aid or just like to poke around on the earth's geography, this program will be of interest to you.

It calculates the bearing and distance from a Home location to a Target location anywhere in the world and displays this result on both azimuthal (polar) and rectangular maps. Both the Home and Target locations may be selected by mouse designations on the rectangular world map or chosen from a menu of cities, countries and callsign areas. The Maidenhead grid system is fully supported on both data-entry and readout. Sun and terminator positions are plotted on both maps in real time from the host computer clock, enabled by a menu selection. Both maps use an accurate, high-resolution, up-to-date geographic database. The azimuth map may be plotted at five different resolutions, allowing an optimum mix of accuracy and computation speed. Additionally, the azimuth plot may be repeatedly zoomed-in or out by a factor of 2 to place both Home and Target on-screen. Bearing and range overlays are provided in the azimuth plot, making it suitable for a printed-out beam-heading chart.

Both the polar and rectangular plots are printed to the standard Windows printer, no special drivers are needed. System requirements are a Pentium processor (P4 recommended), Windows 98, ME, 2000, XP, and 4.8 Megabytes of free disk space.

The download installation file size is 2.5 Megabytes. The program download URL is:

http://tonnesoftware.com/pizzadownload.html

There are other programs out there that perform this same calculation, but none with the combination of features Pizza offers.

Oh, yeah, that name. Bring up an azimuth plot of the entire world and it hits you in the eye like a big pizza pie -- that's amor�!

Jim, K7JEB

AMSAT NEWS SERVICE
ANS-177

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:

ans-editor@amsat.org

In this edition:

* ARISS Status - June 20, 2005
* One Year Anniversary of Echo
* Symposium Registration Now Online
* SSETI Express to Leave Cleanroom
* 2006 Slate of BOD Candidates
* AMSAT Awards

SB SAT @ AMSAT $ANS-177.01
ARISS Status - June 20, 2005

AMSAT News Service Bulletin 177.01
From AMSAT HQ SILVER SPRING, MD.
June 26, 2005
To All RADIO AMATEURS
BID: $ANS-177.01

1. Canadian School Contact Successful

On Friday, June 17, fifteen students from Ecole De la Source, an elementary school in Mascouche, Quebec, Canada, spoke to John Phillips, KE5DRY, via ham radio. Fifteen questions were asked of the astronaut as an audience of approximately 400 students, parents, and dignitaries, assembled in the gymnasium, watched via a video link. Two national television stations and one newspaper covered the event.

2. Upcoming School Contacts

The Mayborn Museum at Baylor University in Waco, Texas has been approved for a contact via the telebridge station WH6PN in Hawaii. It will take place on Monday, June 27 at 16:05 UTC.

3. Article on Australian School Contact

On Thursday, June 2, students from Brigidine College in Sydney, New South Wales, Australia spoke to John Phillips, KE5DRY. An article was written and posted on the school's website. See:
http://www.bcr.randwick.syd.catholic.edu.au/home/space/

4. SuitSat Educational Project Status

Approximately 200 pieces of artwork have been submitted for the SuitSat DVDs. It has been noted that Space Camp Turkey, a participant of two ARISS contacts in the past, sent in their own artwork, taking advantage of yet another ARISS opportunity.

5. ARISS Software

Sergey Samburov sent to Kenneth Ransom a CD containing Kenwood operations, SSTV instructions, and other software programs. The U.S. team will review the contents and provide updates for the software, as needed. Once finalized, the CD will be sent to the ISS on a future Progress flight.

Mark Steiner contacted QRZ and received an update to the callsign database. The new database will be shipped to Houston along with the SuitSat Educational Project CDs, and will be included in the Progress 19P manifest.

6. News of SuitSat Spreads

The ARRL has been fielding questions from reporters about SuitSat, and has prepared a story for their own Web site.

On June 15, Space.com ran an article entitled, "Old Spacesuit, New Satellite." See:
http://www.space.com/astronotes/astronotes.html

On June 16, WFMY News 2 also ran an article on SuitSat. See:
http://www.wfmynews2.com/news/technology/tech_article.aspx?storyid=42975

ARRL's own article, "Fall Launch Viewed for 'SuitSat' as ARISS-US Delivers Hardware," can be found at:
http://www.arrl.org/news/stories/2005/06/17/2/?nc=1

7. Astronaut Training

Astronaut John Grunsfeld is tentatively scheduled to attend an ARISS operations overview session on Friday, July 8. Grunsfeld is the backup for Expedition 13.

8. ARRL Article on ISS Participation in Field Day

John Phillips, KE5DRY, and Sergei Krikalev, U5MIR, may participate in Field Day on June 25 - 26. The ARRL article, "ISS Astronauts Could Be on the Air for Field Day!" includes pass times when the Expedition 11 crew may be available for a contact. See:
http://www.arrl.org/news/stories/2005/06/15/2/?nc=1

9. ARRL Article on John Phillips

Astronaut John Phillips spoke to members of Congress about what living on the ISS means in terms of future exploration plans. On June 15, the ARRL covered this story in the article, "Ham-Astronaut testifies before Congress

from space." See:
http://www.arrl.org/

[ANS thanks Carol, KB3LKI for the above information]

SB SAT @ AMSAT $ANS-177.02
One Year Anniversary of Echo

AMSAT News Service Bulletin 177.02
From AMSAT HQ SILVER SPRING, MD.
June 26, 2005
To All RADIO AMATEURS
BID: $ANS-177.02

June 29th will mark the 1-year anniversary of the Launch of Echo. On June 29, 2004, Echo, now AO-51, was launched from Baikonur, Kazakhstan, on top of a Dnepr launch vehicle. Echo was one of 8 satellites which were placed into Sun Synchronous Orbit during this launch. After approximately a month of commissioning and testing, the satellite was placed into amateur radio service.

Much more information about the history of Echo is available in Gould Smith's (WA4SXM) book, "AO-51 Development, Operations, and Specifications," available from AMSAT-NA.

I hope everyone has enjoyed the first year of Echo's in-orbit life, the wide variety of modes and experiments that have been operated to date on the satellite, and are looking forward to many more opportunities with Echo in the years ahead. If you use and enjoy Echo please consider joining AMSAT-NA, or your Country's AMSAT organization. It is one way that we can continue to do what we enjoy; make contacts via Amateur Radio Satellites.

[ANS thanks Mike, KE4AZN for the above information]

/EX

SB SAT @ AMSAT $ANS-177.03
Symposium Registration Now Online

AMSAT News Service Bulletin 177.03
From AMSAT HQ SILVER SPRING, MD.
June 26, 2005
To All RADIO AMATEURS
BID: $ANS-177.03

Registration for the 2005 AMSAT Space Symposium is now available on-line. The Symposium will be held October 7-9 at the Holiday Inn Holidome in downtown Lafayette, LA. Information can be found on the Symposium web page at: http://www.amsat.org/amsat-new/symposium/

In addition to downloading the registration form, for the first time

attendees can now register online through the AMSAT store. Registration forms will also be mailed out with the annual ballots for the AMSAT board of directors. Please see the AMSAT Store registration for more information:
http://www.amsat-na.com/SymposiumReg.php

Registration for the Annual Banquet, the Friday Night Shrimp Boil and the Sunday Swamp Tour can all be done at the time you register for the Symposium.

[ANS thanks Emily, W0EEC for the above information]

/EX

SB SAT @ AMSAT $ANS-177.04
SSETI Express to Leave Cleanroom

AMSAT News Service Bulletin 177.04
From AMSAT HQ SILVER SPRING, MD.
June 26, 2005
To All RADIO AMATEURS
BID: $ANS-177.04

The SSETI Express flight model is expected to be fully completed before the end of this week and will then be taken out from the cleanroom and packed for dispatch to the launch site at Plesestk. This means that the webcam pictures at http://sseti.gte.tuwien.ac.at/WSW4/webcam.htm will be almost the last ones available before launch. Presently they are updated every 5 minutes.

SSETI Express is scheduled for launch on Aug 25th and after initial telemetry and telecommand operations is expected to provide a U/S FM transponder in the amateur satellite service.

More details of the launch, the telemetry formats, frequencies and available software will be made available over the forthcoming days/weeks prior to launch.

ESA (and AMSAT-UK) really hope that as many amateurs around the world as possible will be willing to download the telemetry (9k6 on 437 MHz and 38k4 on 2.4 GHz), decode it and forward it to the SSETI Control Station over the internet. This opportunity to participate will enable us to show that the amateur satellite service groundstation network is a viable system for such short term projects. This in turn will encourage them and possibly other launch agencies to actively consider incorporating amateur transponder equipment in their future projects!

[ANS thanks Graham, G3VZV for the above information]

/EX

SB SAT @ AMSAT $ANS-177.05
2006 Slate of BOD Candidates

AMSAT News Service Bulletin 177.05
From AMSAT HQ SILVER SPRING, MD.
June 26, 2005
To All RADIO AMATEURS
BID: $ANS-177.05

Nominations for the position of Director for AMSAT, Inc. closed on June 15th. The list of qualified candidates are:

Barry Baines WD4ASW
Emily Clark W0EEC
Richard M. Hambly W2GPS
Bob McGwier N4HY
Gunther Meisse W8GSM
Bruce Paige KK5DO
Lee McLamb KU4OS
Greg Wycoff N0ZHE

Ballot cards will be mailed to members on or about July 15th, and are due in the AMSAT Office no later than September 15th.

[ANS thanks Steve, W4EPI for the above information]

/EX

SB SAT @ AMSAT $ANS-177.06
AMSAT Awards

AMSAT News Service Bulletin 177.06
From AMSAT HQ SILVER SPRING, MD.
June 26, 2005
To All RADIO AMATEURS
BID: $ANS-177.06

This week, congrats go out to all of the following. All one of them.

David Bird, KC7USS, 51 on 51 Award #28

Who will earn 51 on 51 Award #100? Remember, this award is only available until December 31, 2005.

To see all the awards visit http://www.amsat.org or http://www.amsatnet.com

[ANS thanks Bruce, KK5DO for the above information]

/EX

In addition to regular membership, AMSAT offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT Office.

73,

This week's ANS Editor,
Al Marote, WA1LBG

VO-52 HAMSAT
Catalog Number: 28650
Launch Date: May 05,2005

Status: On orbit
Current Mode: U/V

Proposed frequencies:

Indian transponder:
Uplink : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacom : 145.940MHz continue carier signal

Dutch transponder:
Uplink : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacon : 145.860MHz 12WPM with CW message

HAMSAT has been assigned the OSCAR designation VO-52.

AO-51 ECHO
Catalog number: 28375
Launch date: June 29, 2004

Status: Testing
Curent Mode: PBBS - ON
      FM REPEATER - ON

Analog voice downlink: 435.300 MHz FM
Analog voice uplink: 145.920 MHz FM 67Hz PL tone
                       1268.700 MHz FM 67Hz PL tone

Digital Downlinks: 435.150 MHz FM, 38k4 Digital, PBP, 1 watt output
                       2401.200 MHz FM 38k4 bps, AX.25
Digital Uplink: 145.860 MHz FM, 9k6 Digital, Pacsat Broadcast
   Protocol (PBP)

Broadcast: PECHO-11
BBS: PECHO-12

AO-51 Schedule of Modes for June 2005:

27 June
FM Repeater, V/U
Uplink: 145.920 MHz FM, 67 Hz PL Tone
Downlink 435.300 MHz FM
9k6 Digital, V/U, PBP BBS (Pacsat Broadcast Protocol BBS)
Uplink: 145.860 MHz FM, 9k6 PBP Digital
Downlink: 435.150 MHz FM, 9k6 PBP Digital

All dates are UTC.

From the Satellite Software Development Team:

Due to restrictions in the Satellite, there can be no digi functionality on Echo at this time.

Explanation:
Random noise from a receiver that is fed through the demodulator and into the SCC (a sort of smart UART) will cause interrupts to be sent to the CPU. With Echo having 4 or 5 open receivers the number of interrupts was enough to cause the CPU difficulties in getting normal processing done in a timely fashion. Basically, the CPU was locked up trying to handle the interrupts. Echo is operating its SCC ports in a mode that will only pass AX.25 packets beginning with a certain character, which is called 'block' mode. This configuration solved the interrupt problem. For Echo, with the call sign being "PACB or PECHO", only packets beginning with the character 'P' can get through the SCC and generate a CPU interrupt.

A digi packet has the call sign of the destination station first, followed by the satellite (relay) call sign, and then the originator call sign. Therefore, the digi packet will not get through the SCC unless the destination station call sign begins wit   htheletter'P'.

A great deal of effort was put into solving this problem. This solution is the only one at the present time that has worked well enough to implement in the Satellite.

[ANS thanks Mike, KE4AZN for the above information]

For further scheduled modes/tests, check out the Echo status page at:
http://www.amsat.org/amsat-new/echo/

Mike Kingery (KE4AZN) has released a upgrade to TimEcho to capture and decode telemetry broadcast from Echo's digital downlink. TimeEcho software and other Ao-51 ECHO information is available at:
http://web.infoave.net/~mkmk518/echo.htm

[ANS thanks Mike, KE4AZN for the above information]
[06262005]

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that So-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm
  the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT
  the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window
  will reset the 10 minute timer.
[09122004]
=====
FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will
automatically analyze all digital telemetry from the satellite (such as
current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[03132005]
=====
AO-27 AMRAD
Catalog number: 22825
Launched: September 26, 1993

Status: Operational

Uplink: 145.850 MHz FM
Downlink: 436.795 MHz FM

The latest information on AO-27 from control operator Michael Wyrick,
N3UC (former N4USI), can be found at:
http://www.ao27.org

An AO-27 question-and-answer page is available on the AMSAT-NA web
site, with updates by Ray, W2RS. The URL is:
http://www.amsat.org/amsat/intro/ao27faq.html

[ANS thanks John, K6YK, for this week's AO-27 report]
[08292004]
=====
AO-7 AMSAT OSCAR 7
Catalog number: 07530
Launch Date: November 15, 1974

Status: Semi-operational in sunlight.
Return to active status: June 21,2002

Uplink: 145.850 to 145.950 MHz CW/USB Mode A
432.125 to 432.175 MHz CW/LSB Mode B
Downlink: 29.400 to 29.500 MHz CW/USB Mode A
145.975 to 145.925 MHz CW/USB Mode B
Beacon: 29.502 MHz, 145.972 MHz, 435.1 MHz, 2304.1 MHz

Emily, W0EEC has created a website to allow the users of AO-7 to record contacts, observations and use of the satellite more effectively at:
http://www.emilyshouse.com/experthams/ao7/main.php
This includes the ability to log contacts.

Tim, K3TZ has written a program to decode AO-07 telemetry.
The program can be downloaded at:
http://www.qsl.net/k3tz/files/K3TZ_AO-07_Telemetry_Decoder_0.5.zip

For more AO-7 info:

UO-11 OSCAR-11
Catalog number: 14781
Launched: March 1, 1984

```
Status: Semi-operational?

Telemetry Downlink: 145.826 MHz. FM (1200-baud AFSK).
                    approx. 10 days ON, 10 days OFF
Mode-S Beacon:      2401.500 MHz. ... OFF
UHFBeacon:          435.025 MHz. ...  OFF

This from Clive, G3CWV:

There is a small chance that OSCAR-11 may have started transmitting
again between 08 June to 10 June.

The frequency is 145.826.

Any reception reports would be appreciated. Please reply direct to
Clive G3CWV (g3cwv@amsat.org), or post reports to AMSAT-BB.

[ANS thanks Clive, G3CWV for the above information]

PO-34 PANSAT
Catalog number: 25520
Launched: October 30, 1998

Status: Telemetry downloads only

Uplink/downlink frequency (listed on the PanSat web site) 436.500 MHz

The satellite is not available for general uplink transmissions.

The Naval Postgraduate School developed PanSat. At the time of launch, PanSat spread-spectrum digital transponders were to be available to Amateur Radio operators along with software to utilize this technology.

The satellite is still operating, however, the spread spectrum packet radio portion never took place. The spacecraft is now beyond it's initial 2-year mission life, but telemetry records are still being downloaded.

For more information, visit the official PanSat web site at:
http://www.sp.nps.navy.mil/pansat/
[05092004]

=====

=====
NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Non-Operational?????

Uplink/downlink: 145.827 MHz 1200 baud AX.25 AFSK via W3ADO-1
Aux/Uplink: 435.250 MHz 9600 baud via PCSAT-2 (off)
APRS Downlink: 144.390 MHz (Region 2)

This from Bob, WB4APR:
PCsat returned to negative-power-budget mode on 16 Feb 2005 and is not expect- ed to be restorable until the next full-sun period in the Fall when the southern Sun can better illuminate the south facing panel. Between now and then you are welcome to try to get a packet digipeated, but this will usually only work during mid-day passes in the Northern Hemisphere due to sun angles.

Question asked of Bob WB4APR recently on the amsat-bb:
Is it alive?? I was just looking at the pcsat.aprs.org page at Findu and it shows a lot of stations recently (within the last day) digipeating through it.

Bob's reply:
PCsat is always "alive", but can only muster enough

power to get out a complete packet when it is in near mid-day sun in the Northern hemisphere the higher the latitude the better in the summer.

Over the next 2 weeks PCsat is entering one of thoes periods. The 20 or so stations you see on the LIVE web page are probably unattended beacons. But if u hear good packets on 145.825 from PCsat during mid-day, go ahead and use it...

Fortunately it will be in 100% sun during FD, but Unfortunately, all that sun is from the side and misses the best solar panel. Experience has shown it will be useless at that time.

PCSat is a 1200-baud APRS digipeater designed for use by stations using hand-held or mobile transceivers. Downlinks feed a central web site at:
http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy under the guidance of Bob Bruninga, WB4APR.
[05242005]

=====

AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio anand telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at: http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

UCISAT ?O-??
Catalog number:
Proposed Launch Date: October 31, 2005

Status: Under Construction

Downlink: Submission in Progress
Uplink: Submission in Progress
Callsign: Submission in Progress

This from Matt Bennett, KF6RTB, UCISAT Communications Team Member:

Our website is www.ucisat.net .This is a new website, however, and doesn't have the "Status" section active yet. Because of the growing interest in our project, I'll push our webmaster to create updates (hopefully) on a week-to-week basis. For now, the current status of the mission is as follows:

-Expected Launch Date: October 31st, 2005
-Frequency Allocation: Submission in Progress
-Construction Status: Sub-Assembly
[WSR to thank Matt Bennett, KF6RTB, for this week's report.]
[01302005]
=====
SSETI ?O-??
Catalog Number:
Proposed Launch Date: Early 2005

Status: Under Construction

During the last week, the completed modules have been fitted to the spaceframe and the wiring harness and integration completed. The satellite was moved on Wednesday to an anechoic chamber for EMC testing to ensure that the emissions from the satellites electronics, the 3W UHF transmitter and the S Band TX meet the spectral requirements of the launch agency and SSTL.

Several new pictures showing the rapid progress over the last 2 weeks have been uploaded to the SSETI Website. These include detailed shots of the S Band unit now wired to the antennas, cold gas propulsion and some taken inside the anechoic chamber.

=====
PCSAT2 ?0-??
Catalog Number:
Proposed Launch Date: May 2005

PCSAT2, which had previously been stowed in the Space Shuttle Discovery, arrived at Launch Complex 39B on 07 April 2005. PCSAT2 is now standing by ready to be launched on the first Space Shuttle return-to-flight mission.

PCSAT2 will use the same dual redundant AX.25 command and control system as used on PCsat (NO-44) offering 8 on/off commands, 5 telemetry channels and a serial port for the solar cell experiment telemetry. It also supports the Digital Comms Relay support of the PCsat/APRS mission. The packet uplink is on 145.825 MHz and the default downlinks are in the 435 MHz band to avoid any possible interference with existing ARISS missions. PCSAT2 will have quad redundant transmit inhibits for EVA safety issues, thus, it is also easy to turn off to avoid any issues with other UHF ARISS experiments that may be activated in the future. Also, the mission lifetime of PCSAT2 is only 1 year, because it is a sample-return mission, thus terminating any long term conflicts in spectrum management.

The PCSAT2 mission is intended as an opportunity to augment existing ARISS communications experiments with an external autonomous communications payload. In this regard, it has several potential uses:

* A UI-Digipeater to help ease congestion on the currently shared ARISS PMS (Packet Mail system)

* A PSK-31 transponder for multi-user communications to improve accessibility for schools and ARISS outreach programs.

* An FM Voice repeater for full duplex crew communications to facilitate crew-to-school ARISS contacts.

* Routine Telemetry on the spacecraft systems

For more information and pictures visit the PCSAT2 website at
http://www.ew.usna.edu/~bruninga/pcsat2.html

[ANS thanks Bob, WB4APR for the above information]

=====
PHASE 3E ?O-??
Catalog Number:
Proposed Launch Date: Early 2006

Status: Under Construction

The AMSAT-Phase 3E satellite (P3E) is dedicated as communication and scientific platform for a highly elliptical orbit around Earth. The spacecraft will be created in a joint process together with the P5A Mars mission by an international team under leadership of AMSAT-DL and continues the successful series of AMSAT-Phase 3 satellites. Additionally the spacecraft will be a test bench for technology developped for the Mars mission. The main task of P3E is to act as communication platform for radio amateurs worldwide. A launch is planned in the period 2004 to 2006.

For the latest project status update please visit the AMSAT-DL P3-E web page:

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
        888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)

* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satelite Report Editor is James K. Darrow, KB9MMC.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:
ans-editor{at}amsat.org

AMSAT NEWS SERVICE
ANS-184

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:

ans-editor@amsat.org

In this edition:

* AO-51 Off-Air
* ARISS Status
* Symposium Registration Now Online
* New Items at the AMSAT Store
* STSTLE List Operational Again
* Please Report Your AMSAT Field Day Results
* AMSAT Membership Challenge
* One Year Anniversary of Echo

SB SAT @ AMSAT $ANS-184.01
AO-51 Off-Air

AMSAT News Service Bulletin 184.01
From AMSAT HQ SILVER SPRING, MD.
July 3, 2005
To All RADIO AMATEURS
BID: $ANS-184.01

Sometime on Sunday, 26 June 2005, there was a software reset on AO-51.

Getting a memory download of each program that was running on the satellite at the time has been completed. The Software Group will study this data to debug the programs. This will take a number of days to accomplish. We are working on this as fast as possible to get Echo back up and running.

Update 2 July from the AO-51 Web Site:

The current plan is to begin the sof twarereloadingSaturdayevening. When completed the satellite will be placed in the normal V/U FM repeater and 9k6 digital mode.

FM Repeater, V/U
Uplink: 145.920 mhz FM, 67 hz PL Tone
Downlink 435.300 mhz FM
9k6 Digital, V/U, PBP BBS (Pacsat Broadcast Protocol BBS)
Uplink: 145.860 mhz FM, 9k6 PBP Digital
Downlink: 435.150 mhz FM, 9k6 PBP Digital

[ANS thanks Mike, KE4AZN for the above information]

SB SAT @ AMSAT $ANS-184.02
ARISS Status

AMSAT News Service Bulletin 184.02
From AMSAT HQ SILVER SPRING, MD.
July 3, 2005
To All RADIO AMATEURS
BID: $ANS-184.02

1.Texan School Contact Successful

Students attending the Hockaday Schools summer program in Dallas, Texas had the opportunity to speak to John Phillips, KE5DRY, on Monday, June 20. An audience of 300 students, teachers and parents gathered and watched as twelve children asked 22 questions of the astronaut. There was limited media coverage, but those attending were thrilled with the event!

2.Planned School Contacts

The Mayborn Museum at Baylor University in Waco, Texas was scheduled for a contact via the telebridge station, WH6PN, in Hawaii on Monday, June 27 at 16:05 UTC.

Yokohama Elementary School in Kochi, Japan has been scheduled for a contact on Monday, July 4 at 09:20 UTC.

3.ARRL Article on Canadian, Swiss School Contacts

Students from Zurich International School in Horgen, Switzerland and children attending Ecole de la Source, in Mascouche, Quebec, Canada, experienced ARISS contacts with John Phillips, KE5DRY, on June 10 and 17,
respectively. ARRL ran a web story entitled, "International Students, Quebec Primary Schoolers Quiz Astronaut via Ham Radio."

See: http://www.arrl.org/news/stories/2005/06/22/4/?nc=1

4.ARISS CDs Delivered

The SuitSat Educational Project CDs and the updated QRZ callsign database
CD were transferred to Alexander Poleschuk. Mr. Poleschuk will deliver them to Energia this week.

5.Expedition 10 Crew Debrief Scheduled

The ARISS-U.S. team has been scheduled for a crew debrief with Leroy Chiao, KE5BRW. The Expedition 10 debrief is planned for Tuesday, June 28 at 4:15 pm ET.

6.ARISS International Meeting Held

The monthly ARISS International Teleconference was held on Tuesday, June 21. Items of discussion included preparation for the ARISS International
Meeting to be held in the U.K. August 1 / 2, and the funding which was obtained for the ARISS S-Band and L-Band antennas on the Columbus Module.
Also covered were the shipment of SSTV and SuitSat hardware, and the status of the SuitSat Educational Project. The next ARISS International Teleconference will be held on Tuesday, July 19.

[ANS thanks Carol Jackson, KB3LKI for the above information]

SB SAT @ AMSAT $ANS-184.03
Symposium Registration Now Online

AMSAT News Service Bulletin 184.03
From AMSAT HQ SILVER SPRING, MD.
July 3, 2005
To All RADIO AMATEURS
BID: $ANS-184.03

Registration for the 2005 AMSAT Space Symposium is now available on-line.
The Symposium will be held October 7-9 at the Holiday Inn Holidome in downtown Lafayette, LA. Information can be found on the Symposium web page at:

http://www.amsat.org/amsat-new/symposium/

In addition to downloading the registration form, for the first time attendees can now register online through the AMSAT store. Registration forms will also be mailed out with the annual ballots for the AMSAT board of directors. Please see the AMSAT Store registration for more information:

http://www.amsat-na.com/SymposiumReg.php

Registration for the Annual Banquet, the Friday Night Shrimp Boil and the Sunday Swamp Tour can all be done at the time you register for the Symposium.

[ANS thanks Emily, W0EEC for the above information]

SB SAT @ AMSAT $ANS-184.04
New Items at the AMSAT Store

AMSAT News Service Bulletin 184.04
From AMSAT HQ SILVER SPRING, MD.
July 3, 2005
To All RADIO AMATEURS
BID: $ANS-184.04

Bruce Paige, KK5DO, wearing his AMSAT Store Manager hat reports he has just completed adding some new items to the AMSAT Store. These items were first introduced at the 2005 Dayton Hamvention.

AMSAT White T-Shirt $15
AMSAT Maroon Golf Shirt $30
AMSAT Gray Golf Shirt $30

Sizes small and medium are not available.

AMSAT Maroon Hat $10

AMSAT Magnet $2

Also recently added is the newly revised for 2005 book, "Getting Started With Amateur Satellites". This well written guide now includes both AO-51 and VO-52. The Digital Guide has been renamed to "Digital Satellite & Telemetry Guide" and was also revised in 2005.

Visit the Online AMSAT Store at http://www.amsat.org

[ANS thanks Bruce, KK5DO for the above information.]

STSTLE List Operational Again

AMSAT News Service Bulletin 184.05
From AMSAT HQ SILVER SPRING, MD.
July 3, 2005
To All RADIO AMATEURS
BID: $ANS-184.05

The "STSTLE" is re-mobilizing in anticipation of the Space Shuttle return
to flight. Because of the long hiatus following the Columbia tragedy,
the team is re-constituting the mailing list from scratch.

As in the past, the Space Shuttle orbital data will be posted on the AMSAT Web site. However, those wishing to receive AMSAT and TLE Keplerian data directly by e-mail will need to re-subscribe to the mailing list.

As in the past, we shall endeavor to provide several updates daily as well as provide updates to cover all thrust events.

The STSTLE Team Consists of:
- Dave Cottle, Sydney Australia
- Ken Ernandes, N2WWD, Indialantic, FL
- Dave Ransom, Pacific Palisades, CA
- Dave Simonson, Indialantic, FL

The link for e-mail subscribing/un-subscribing is:

www.aus-city.com/cgi-bin/dada/mail.cgi?flavor=subscribe&list=STSTLE_LIST

The provided e-mail address will checked and the user will be sent a subscription confirmation they will need to click to complete the process.

[ANS thanks Ken Ernandes, N2WWD for the above information.]

SB SAT @ AMSAT $ANS-184.06
Please Report Your AMSAT Field Day Results

AMSAT News Service Bulletin 184.06
From AMSAT HQ SILVER SPRING, MD.
July 3, 2005

To All RADIO AMATEURS
BID: $ANS-184.06

Bruce Paige, KK5DO, wearing his AMSAT Director of Contests and Awards hat, reminds us now that Field Day is over, please remember to get your pictures and stories as well as your score to him by midnight, July 18, 2005. Send your Field Day information to kk5do@amsat.org. He will then tabulate the results and get them into the Journal and AMSAT's online service.

Gunther Meisse would like pictures of kids operating satellites on Field Day 2005 for use in our AMSAT printed materials. Please e-mail to Gunther
Meisse, W8GSM at w8gsm@amsat.org. Thanks in advance for your help.

[ANS thanks Bruce, KK5DO, and Gunther W8GSM for the above information.]

SB SAT @ AMSAT $ANS-184.07
AMSAT Membership Challenge

AMSAT News Service Bulletin 184.7
From AMSAT HQ SILVER SPRING, MD.
July 3, 2005
To All RADIO AMATEURS
BID: $ANS-184.07

AMSAT member Kevin Schuchmann, WA6FWF, offered a membership challenge on June 27, 2005. Kevin wrote, "I will match the $44 membership fee for every non-member on the AMSAT-BB listserv that joins in the next two weeks up to $1000 dollars. If you have been sitting on the fence please look at what some of the BOD's have been doing for you to use the satellites that you have now like ECHO and join AMSAT knowing that your membership fee will be matched and will go to AMSAT's latest project EAGLE".

Gunther Meisse, W8GSM, AMSAT Treasurer, replied to Kevin, "Thank you for your generous offer. It is positive efforts like yours that will make a difference!!!

This was followed a day later by this message (Ed.)

"As I am sure you saw on the -bb yesterday, we have a great offer going for the next two weeks with a generous member offering to match the new member sign-up dues up to $1,000.00. Well, the offer gets even better today when member, Jeff Davis, KE9V, makes the following offer for the next 23 new member sign-ups: "I'd be willing buy the new AMSAT book, 'Getting Started With Amateur Satellites' ($15 each) for each of those 22 new AMSAT members who joins in the next few weeks." Thanks Jeff.."

Now, come on non members. What better time to join thsn right now? Your sign-up has double the financial impact.. We need just 22 new sign-ups within the next two weeks to take full advantage of this generous offer."

Either go to the amsat.org web site, or call Martha at AMSAT Headquarters after 10AM EDT at (301) 589-6062. She is standing by to help you!

[ANS thanks Kevin, WA6FWF, and Gunther, W8GSM, for the above information]

SB SAT @ AMSAT $ANS-184.08
One Year Anniversary of Echo

AMSAT News Service Bulletin 184.08
 From AMSAT HQ SILVER SPRING, MD.
July 3, 2005
To All RADIO AMATEURS
BID: $ANS-184.08

June 29th will mark the 1-year anniversary of the Launch of Echo. On June 29, 2004, Echo, now AO-51, was launched from Baikonur, Kazakhstan, on top of a Dnepr launch vehicle. Echo was one of 8 satellites which were placed into Sun Synchronous Orbit during this launch. After approximately a month of commissioning and testing, the satellite was placed into amateur radio service.

Much more information about the history of Echo is available in Gould Smith's (WA4SXM) book, "AO-51 Development, Operations, and Specifications", available from Amsat-NA.

I hope everyone has enjoyed the first year of Echo's in-orbit life, the wide variety of modes and experiments that have been operated to date on the satellite, and are looking forward to many more opportunities with Echo in the years ahead. If you use and enjoy Echo please consider joining Amsat-NA, or your Country�*s Amsat organization. It is one way that we can continue to do what we enjoy; make contacts via Amateur Radio Satellites.

73 KE4AZN
Echo Command Team
Echo Operation Group
Amsat VP Operations

[ANS thanks Lee, McLamb, KU4OS for the above information]

/EX

In addition to regular membership, AMSAT offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits.

Application forms are available from the AMSAT Office.

=====
AO-51 ECHO
Catalog number: 28375
Launch date: June 29, 2004

Status: Testing
Curent Mode: PBBS - ON
      FM REPEATER - ON

Analog voice downlink:  435.300 MHz FM
Analog voice uplink:    145.920 MHz FM 67Hz PL tone
                       1268.700 MHz FM 67Hz PL tone

Digital Downlinks:      435.150 MHz FM, 38k4 Digital, PBP, 1 watt output
                       2401.200 MHz FM  38k4 bps, AX.25
Digital Uplink:         145.860 MHz FM, 9k6 Digital, Pacsat Broadcast
   Protocol (PBP)

Broadcast: PECHO-11
BBS:  PECHO-12

4 July until ????
FM Repeater, V/U
Uplink: 145.920 mhz FM, 67 hz PL Tone
Downlink 435.300 mhz FM
9k6 Digital, V/U, PBP BBS (Pacsat Broadcast Protocol BBS)
Uplink: 145.860 mhz FM, 9k6 PBP Digital
Downlink: 435.150 mhz FM, 9k6 PBP Digital

We are going to run in this mode for a while to monitor the satellite after
the software reloading.
```

AO-51 is back operational in the mode listed below. Both the PBBS and the FM repeater are turned on and users are welcome to use the satellite. The software reloading has been completed. I spent a good deal of my holiday time this week and weekend at home in order to download the data and then reload the satellite software to get it back up and running ASAP.

The software team has reviewed the data downloaded from the satellite memory. They indicate nothing out of the ordinary in their first review of the data, therefore the decision was made to reload the satellite software and get AO-51 active again. The software team will continue to review the information they have. Also, if we have another problem and the satellite resets itself again, we will download the memory and compare the results.

[07032005]
=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that So-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz. The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10 minute timer.

[09122004]
=====
FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

=====
AO-7 AMSAT OSCAR 7
Catalog number: 07530
Launch Date: November 15, 1974

Status: Semi-operational in sunlight.
Return to active status: June 21,2002

Uplink: 145.850 to 145.950 MHz CW/USB Mode A
            432.125 to 432.175 MHz CW/LSB Mode B
Downlink: 29.400 to 29.500 MHz CW/USB Mode A
            145.975 to 145.925 MHz CW/USB Mode B
Beacon: 29.502 MHz, 145.972 MHz, 435.1 MHz, 2304.1 MHz

Emily, W0EEC has created a website to allow the users of AO-7 to record
contacts, observations and use of the satellite more effectively at:
http://www.emilyshouse.com/experthams/ao7/main.php

This includes the ability to log contacts.

Tim, K3TZ has written a program to decode AO-07 telemetry.
The program can be downloaded at:
http://www.qsl.net/k3tz/files/K3TZ_AO-07_Telemetry_Decoder_0.5.zip

For more AO-7 info:
http://www.amsat.org/amsat/sats/n7hpr/ao7.html

INTERNATIONAL SPACE STATION (ISS) - ARISS
Catalog number: 25544
Launch date: November 20, 1998

Status: Operational
Current Mode: Packet (APRS-style connections)
Digipeater: Active

The current Expedition 11 crew is:
Commander Sergei Krikalev
Flight Engineer John Phillips

Worldwide packet uplink: 145.990 MHz FM
Region 1 voice uplink: 145.200 MHz FM
Region 2/3 voice uplink: 144.490 MHz FM
Worldwide downlink: 145.800 MHz FM

Repeater Uplink: 437.800 MHz FM
Repeater Downlink: 145.800 MHz FM
Doppler Shift is 10 KHz

Russian callsigns: RS0ISS, RZ3DZR
USA callsign: NA1SS
Packet station mailbox callsign: RS0ISS-11
Packet station keyboard callsign: RS0ISS-3
Digipeater callsign: ARISS

The ISS daily crew schedule can be found at:
http://spaceflight.nasa.gov/station/timelines/
Remember that the crew operates on UTC time. Also, all of the time line is
NOT translated from Russian and posted.

AMSAT NEWS SERVICE BULLETIN 185.S2 FROM AMSAT HQ
SILVER SPRING, MD, JULY 03, 2005
TO ALL RADIO AMATEURS
BID: $ANS-185.S2

AO-51 ECHO
Catalog number: 28375
Launch date: June 29, 2004

Status: Testing
Curent Mode: PBBS - ON
FM REPEATER - ON

Analog voice downlink: 435.300 MHz FM
Analog voice uplink: 145.920 MHz FM 67Hz PL tone
1268.700 MHz FM 67Hz PL tone

Digital Downlinks: 435.150 MHz FM, 38k4 Digital, PBP, 1 watt output
2401.200 MHz FM 38k4 bps, AX.25
Digital Uplink: 145.860 MHz FM, 9k6 Digital, Pacsat Broadcast Protocol (PBP)

Broadcast: PECHO-11
BBS: PECHO-12

4 July until ????
FM Repeater, V/U
Uplink: 145.920 mhz FM, 67 hz PL Tone
Downlink 435.300 mhz FM
9k6 Digital, V/U, PBP BBS (Pacsat Broadcast Protocol BBS)
Uplink: 145.860 mhz FM, 9k6 PBP Digital
Downlink: 435.150 mhz FM, 9k6 PBP Digital

We are going to run in this mode for a while to monitor the satellite after the software reloading.

AO-51 is back operational in the mode listed below. Both the PBBS and the FM repeater are turned on and users are welcome to use the satellite. The software reloading has been completed. I spent a good deal of my holiday time this week and weekend at home in order to download the data and then reload the satellite software to get it back up and running ASAP.

The software team has reviewed the data downloaded from the satellite memory. They indicate nothing out of the ordinary in their first review of the data, therefore the decision was made to reload the satellite software and get AO-51 active again. The software team will continue to review the information they have. Also, if we have another problem and the satellite resets itself again, we will download the memory and compare the results.

PO-34 PANSAT
Catalog number: 25520
Launched: October 30, 1998

Status: Telemetry downloads only

Uplink/downlink frequency (listed on the PanSat web site) 436.500 MHz

The satellite is not available for general uplink transmissions.

The Naval Postgraduate School developed PanSat. At the time of
launch, PanSat spread-spectrum digital transponders were to
be available to Amateur Radio operators along with software to utilize
this technology.

The satellite is still operating, however, the spread spectrum packet
radio portion never took place. The spacecraft is now beyond it's
initial 2-year mission life, but telemetry records are still being
downloaded.

For more information, visit the official PanSat web site at:
http://www.sp.nps.navy.mil/pansat/

=====
NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Non-Operational?????

Uplink/downlink:   145.827 MHz 1200 baud AX.25 AFSK via W3ADO-1
Aux/Uplink:        435.250 MHz 9600 baud via PCSAT-2 (off)
APRS Downlink:     144.390 MHz (Region 2)

This from Bob, WB4APR:
PCsat returned to negative-power-budget mode on 16 Feb 2005 and is not
expect- ed to be restorable until the next full-sun period in the Fall
when the southern Sun can better illuminate the south facing panel.
```

Between now and then you are welcome to try to get a packet digipeated, but this will usually only work during mid-day passes in the Northern Hemisphere due to sun angles.

Question asked of Bob WB4APR recently on the amsat-bb:
Is it alive?? I was just looking at the pcsat.aprs.org page at Findu and it shows a lot of stations recently (within the last day) digipeating through it.

Bob's reply:
PCsat is always "alive", but can only muster enough power to get out a complete packet when it is in near mid-day sun in the Northern hemisphere the higher the latitude the better in the summer.

Over the next 2 weeks PCsat is entering one of thoes periods. The 20 or so stations you see on the LIVE web page are probably unattended beacons. But if u hear good packets on 145.825 from PCsat during mid-day, go ahead and use it...

Fortunately it will be in 100% sun during FD, but Unfortunately, all that sun is from the side and misses the best solar panel. Experience has shown it will be useless at that time.

PCSat is a 1200-baud APRS digipeater designed for use by stations using hand-held or mobile transceivers. Downlinks feed a central web site at:
http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy under the guidance of Bob Bruninga, WB4APR.

=====
AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio anand telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at: http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

Downlink: 436.8375 CW
437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan)

Fernando, LU1HKO, reports hearing Cute-1 on 03/06/2005 18:40 (LU Time) sending CW telemetry.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at 14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz. Initial orbital parameters were period 101.4 min, apogee 831 km, perigee

819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

ANS WSR is looking for more information about this satellite.

AMSAT NEWS SERVICE BULLETIN 185.S4 FROM AMSAT HQ
SILVER SPRING, MD, JULY 03,2005
TO ALL RADIO AMATEURS
BID: $ANS-185.S4

THE FOLLOWING SATELLITES ARE NOT IN ORBIT BUT ARE
PROPOSED FOR LAUNCH AT THIS TIME:

UCISAT ?O-??
Catalog number:
Proposed Launch Date: October 31, 2005

Status: Under Construction

Downlink: Submission in Progress
Uplink: Submission in Progress
Callsign: Submission in Progress

This from Matt Bennett, KF6RTB, UCISAT Communications Team Member:

Our website is www.ucisat.net .This is a new website, however, and doesn't have the "Status" section active yet. Because of the growing interest in our project, I'll push our webmaster to create updates (hopefully) on a week-to-week basis. For now, the current status of the mission is as follows:

-Expected Launch Date: October 31st, 2005
-Frequency Allocation: Submission in Progress
-Construction Status: Sub-Assembly
[WSR to thank Matt Bennett, KF6RTB, for this week's report.]
[01302005]
=====
SSETI ?O-??
Catalog Number:
Proposed Launch Date: Early 2005

Status: Under Construction

>From Graham, G3VZV:
All work on the SSETI Express spacecraft has now been completed and the spacecraft has left its "birthplace" - a cleanroom at the ESA ESTEC facility

in the Netherlands. The spacecraft has been packed into its special transport
container and is en-route to the launch site at Plesetsk in Northern Russia.

The launch date is still listed as 25th August (current approx lift off is 06:50UTC but this may be corrected later) and arrangements are underway for the launch to be shown live on ASTRA-1G - a Ku band satellite covering most of Europe and, hopefully, these transmissions will also be streamed at both high and low resolution on the internet.

Full details of all these media resources will be made known as soon as they are finalised as will details of the telemetry downloading and decoding software and the prizes being offered by ESA for the largest and also the first contributor!

AMSAT-UK will have a team member at the launch site during the launch campaign and intend to provide regular updates during the lead up to August 25th.

You can find more info about SSETI at:
http://sseti.gte.tuwien.ac.at/WSW4/

[ANS thanks Graham, G3VZV for the above information]

Looking at the website for the SSETI Express webcam
http://sseti.gte.tuwien.ac.at/WSW4/webcam.htm

[07032005]
=====
PCSAT2 ?0-??
Catalog Number:
Proposed Launch Date: May 2005

PCSAT2, which had previously been stowed in the Space Shuttle Discovery, arrived at Launch Complex 39B on 07 April 2005. PCSAT2 is now standing by ready to be launched on the first Space Shuttle return-to-flight mission.

PCSAT2 will use the same dual redundant AX.25 command and control system as used on PCsat (NO-44) offering 8 on/off commands, 5 telemetry channels and a serial port for the solar cell experiment telemetry. It also supports the Digital Comms Relay support of the PCsat/APRS mission. The packet uplink is on 145.825 MHz and the default downlinks are in the 435 MHz band to avoid any possible interference with existing ARISS missions. PCSAT2 will have quad redundant transmit inhibits for EVA safety issues, thus, it is also easy to turn off to avoid any issues with other UHF ARISS experiments that may be activated in the future. Also, the mission lifetime of PCSAT2 is only 1 year, because it is a sample-return mission, thus terminating any long term conflicts in spectrum management.

The PCSAT2 mission is intended as an opportunity to augment existing ARISS communications experiments with an external autonomous communications payload. In this regard, it has several potential uses:

* A UI-Digipeater to help ease congestion on the currently shared ARISS PMS (Packet Mail system)

* A PSK-31 transponder for multi-user communications to improve accessibility for schools and ARISS outreach programs.

* An FM Voice repeater for full duplex crew communications to facilitate crew-to-school ARISS contacts.

* Routine Telemetry on the spacecraft systems

For more information and pictures visit the PCSAT2 website at
http://www.ew.usna.edu/~bruninga/pcsat2.html

[ANS thanks Bob, WB4APR for the above information]

=====
PHASE 3E ?O-??
Catalog Number:
Proposed Launch Date: Early 2006

Status: Under Construction

The AMSAT-Phase 3E satellite (P3E) is dedicated as communication and scientific platform for a highly elliptical orbit around Earth. The spacecraft will be created in a joint process together with the P5A Mars mission by an international team under leadership of AMSAT-DL and continues the successful series of AMSAT-Phase 3 satellites. Additionally the spacecraft will be a test bench for technology developped for the Mars mission. The main task of P3E is to act as communication platform for radio amateurs worldwide. A launch is planned in the period 2004 to 2006.

For the latest project status update please visit the AMSAT-DL P3-E web page:
http://www.amsat-dl.org/p3e/

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins trans-

mitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
        888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satelite Report Editor is James K. Darrow, KB9MMC.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

In this edition:

* AO-51 July Schedule
* ARISS Status - 04 July 2005
* OSCAR-11 Reception Reports Requested
* AMSAT Journal Status
* 2004 Annual Report & Audit

SB SAT @ AMSAT $ANS-191.01
AO-51 July Schedule

AMSAT News Service Bulletin 191.01
From AMSAT HQ SILVER SPRING, MD.
July 10, 2005
To All RADIO AMATEURS
BID: $ANS-191.01

The July AO-51 schedule has been posted on the AMSAT Web site www.amsat.org. The mode change on July 11 may not occur on schedule due to Hurricane Dennis' expected path, which is coming right for AMSAT's command operator and station, Mike, KE4AZN. Please understand if that change is delayed by a number of days. Based on the projected path Mike will be taking down his antennas and will be securing everything at his QTH on Saturday.

July 2005 AO-51 (Amsat Echo) Schedule

All dates are UTC. The mode change occurs normally between 0100 and 0400 UTC on the date shown. The mode will be active from the date shown until the next Mode Change date listed. Mode Configurations are listed below the schedule. If for some unplanned reason we need to work with Echo and deviate from the plan a note will be posted to the this Echo page on AMSAT.ORG.

If a specific transmitter or mode is not listed on a given day then it will be off. For example, if TXB (435.300) is not listed during a 38k4 digital mode period then the FM repeater will be off.

4 July
FM Repeater, V/U
Uplink: 145.920 mhz FM, 67 hz PL Tone
Downlink 435.300 mhz FM
k6 Digital, V/U, PBP BBS (Pacsat Broadcast Protocol BBS)
Uplink: 145.860 mhz FM, 9k6 PBP Digital
Downlink: 435.150 mhz FM, 9k6 PBP Digital

11 July

SB SAT @ AMSAT $ANS-191.02
ARISS Status - 04 July 2005

AMSAT News Service Bulletin 191.02
From AMSAT HQ SILVER SPRING, MD.
July 10, 2005
To All RADIO AMATEURS
BID: $ANS-191.02

1. Mayborn Museum Contact Successful

Children visiting the Mayborn Museum at Baylor University in Waco, Texas enjoyed a contact with John Phillips, KE5DRY, on Monday, June 27 via the telebridge station, WH6PN, in Hawaii. Eleven children asked twenty-one questions as a crowd of 200 gathered in the auditorium. Two television stations and a newspaper also attended.

The Waco Tribune-Herald wrote an article entitled, "Local children get chance to talk to astronaut in space." See:
http://www.wacotrib.com/news/content/news/stories/2005/06/28/20050628wacspacelink.html

"Students Enjoy Lively Chat with Astronaut" can be found on the Baylor University website. To view, go to:
http://www.baylor.edu/pr/news.php?action=story&story=34716

The NBC affiliate, KCEN-TV, posted an article on their website with a link to the video coverage of this event. "Kids make long-distance call to space at museum" can be found at:
http://www.museumnews.net/link.asp?ID=27483&Title=KIDS%20make%20long-distance%20call%20to%20space%20at%20museum

The event was also webcast, and audio was fed through the Echolink AMSAT and EDU_NET servers. Connections to the AMSAT conference room were made from 8 countries: Japan, Australia, U.S.A., U.K., Bangladesh, Italy, Ukraine, and Canada.

2. ARISS-Russia Contact

A second ARISS contact was made over the weekend. On Saturday, July 2, children at the Museum K.I. Tziolkovsky in Kirov, Russia were able to speak to Sergei Krikalev, U5MIR, via the telebridge station W5RRR in Houston. The event was webcast, and the audio was fed through Echolink and IRLP.

3. SuitSat Hardware Delivered to Energia

The SuitSat and SSTV hardware arrived in Russia on Wednesday, June 29. The ARISS-Russia team will begin integrating and flight certifying the

SuitSat hardware. All hardware is expected to fly on the Progress 19P, scheduled to launch in the August/September timeframe.

4. Expedition 10 Crew Debrief

On June 28, the ARISS-U.S. team had the opportunity to speak with Leroy Chiao, KE5BRW, about ARISS school contacts and operations during Expedition 10. Leroy's overall impression of the program was positive. Kenneth Ransom presented to Leroy a plaque from the ARRL for his participation in and his support of the ARISS program, and for his record breaking twenty-three contacts - the most school contacts made by one astronaut during a single increment. Thank you Leroy!

5. Expedition 11 Crew Participates in Field Day

John Phillips, KE5DRY, and Sergei Krikalev, U5MIR, both participated in Field Day on June 25-26. John made 25 contacts, and although Sergei's report has not yet been submitted, he did make at least four contacts from Brazil, Thailand, S. Africa and the U.S.

6. PCSAT2/MISSE5 to Fly on STS-114

As part of an educational outreach program, students at the United States Naval Academy, in collaboration with the DOD and ARISS, and under the direction of Bob Bruninga, WB4APR, designed and developed PCSAT2. This payload will be carried on a Materials International Space Station Experiment (MISSE5) on a Passive Experiment Container (PEC). The PEC (suitcase) will be opened and will carry DOD solar cells on the front side, facing the sun, and the back side will carry the amateur satellite communications system which will include Automatic Position Reporting System (APRS) Packet, FM voice repeater, and 10m PSK-31 transponder. The payload will be launched on the Return to Flight STS-114 mission, scheduled for July 13, 2005, and will be deployed via an EVA as an external payload on the ISS. This project is described in detail on Bruninga's website, "PCSAT2 - External ISS Experiment in the Amateur Satellite Service." See: http://www.ew.usna.edu/~bruninga/pcsat2.html

[ANS thanks Carol Jackson, KB3LKI for the above information]

SB SAT @ AMSAT $ANS-191.03
OSCAR-11 Reception Reports Requested

AMSAT News Service Bulletin 191.03
From AMSAT HQ SILVER SPRING, MD.
July 10, 2005
To All RADIO AMATEURS
BID: $ANS-191.03

Clive, G3CWV, reports that he has not heard from OSCAR-11 since 30 April 2005. However he has received two reception reports dated 19 May and 13 June. This suggests that the satellite might be switching ON for one or two orbits at about 24 to 28 day intervals, ie the next transmission might be expected sometime between 07 and 11 July.

Any reception reports during this period, or at any other time would be appreciated. The frequency is 145.826 MHz. and modulation NBFM. Please send any reports direct to g3cwv@amsat.org, or post to AMSAT-BB.

If you are unfamiliar with the sound of OSCAR-11, a 10 second audio clip of the VHF beacon is available at the start of the OSCAR-11 web page. The URL is http://www.users.zetnet.co.uk/clivew/

[ANS thanks Clive, G3CWV for the above information]

VO-52 HAMSAT
Catalog Number: 28650
Launch Date: May 05,2005

Status: On orbit
Current Mode: U/V

Proposed frequencies:

Indian transponder:
Uplink : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacom : 145.940MHz continue carier signal

Dutch transponder:
Uplink : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacon : 145.860MHz 12WPM with CW message

HAMSAT has been assigned the OSCAR designation VO-52.
[06192005]
=====
AO-51 ECHO
Catalog number: 28375
Launch date: June 29, 2004

Status: Testing
Curent Mode: PBBS - ON
      FM REPEATER - ON

Analog voice downlink: 435.300 MHz FM
Analog voice uplink: 145.920 MHz FM 67Hz PL tone
                       1268.700 MHz FM 67Hz PL tone

Digital Downlinks: 435.150 MHz FM, 38k4 Digital, PBP, 1 watt output
                       2401.200 MHz FM 38k4 bps, AX.25
Digital Uplink: 145.860 MHz FM, 9k6 Digital, Pacsat Broadcast
   Protocol (PBP)

Broadcast: PECHO-11
BBS: PECHO-12

4 July until ????
FM Repeater, V/U
Uplink: 145.920 mhz FM, 67 hz PL Tone
Downlink 435.300 mhz FM
9k6 Digital, V/U, PBP BBS (Pacsat Broadcast Protocol BBS)
Uplink: 145.860 mhz FM, 9k6 PBP Digital
Downlink: 435.150 mhz FM, 9k6 PBP Digital

We are going to run in this mode for a while to monitor the satellite after the software reloading.

AO-51 is back operational in the mode listed below. Both the PBBS and the FM repeater are turned on and users are welcome to use the satellite. The software reloading has been completed. I spent a good deal of my holiday time this
week and weekend at home in order to download the data and then reload the satellite software to get it back up and running ASAP.

The software team has reviewed the data downloaded from the satellite memory. They indicate nothing out of the ordinary in their first review of the data, therefore the decision was made to reload the satellite software and get AO-51 active again. The software team will continue to review the information they have. Also, if we have another problem and the satellite resets itself again, we will download the memory and compare the results.

73 KE4AZN
Echo Command Team

[ANS thanks Mike, KE4AZN for the above information]

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that So-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer on board the spacecraft.

2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT
the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window
will reset the 10 minute timer.

=====
FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will
automatically analyze all digital telemetry from the satellite (such as
current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/

=====
AO-7 AMSAT OSCAR 7

Catalog number: 07530
Launch Date: November 15, 1974

Status: Semi-operational in sunlight.
Return to active status: June 21,2002

Uplink: 145.850 to 145.950 MHz CW/USB Mode A
            432.125 to 432.175 MHz CW/LSB Mode B
Downlink: 29.400 to 29.500 MHz CW/USB Mode A
            145.975 to 145.925 MHz CW/USB Mode B
Beacon: 29.502 MHz, 145.972 MHz, 435.1 MHz, 2304.1 MHz

Emily, W0EEC has created a website to allow the users of AO-7 to record contacts, observations and use of the satellite more effectively at:
http://www.emilyshouse.com/experthams/ao7/main.php
This includes the ability to log contacts.

Tim, K3TZ has written a program to decode AO-07 telemetry.
The program can be downloaded at:

=====
NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Non-Operational?????

Uplink/downlink:	145.827 MHz 1200 baud AX.25 AFSK via W3ADO-1
Aux/Uplink:	435.250 MHz 9600 baud via PCSAT-2 (off)
APRS Downlink:	144.390 MHz (Region 2)

This from Bob, WB4APR:
PCsat returned to negative-power-budget mode on 16 Feb 2005 and is not expect- ed to be restorable until the next full-sun period in the Fall when the southern Sun can better illuminate the south facing panel. Between now and then you are welcome to try to get a packet digipeated, but this will usually only work during mid-day passes in the Northern Hemisphere due to sun angles.

Question asked of Bob WB4APR recently on the amsat-bb:
Is it alive?? I was just looking at the pcsat.aprs.org page at Findu and it shows a lot of stations recently (within the last day) digipeating through it.

Bob's reply:
PCsat is always "alive", but can only muster enough power to get out a complete packet when it is in near mid-day sun in the Northern hemisphere the higher the latitude the better in the summer.

Over the next 2 weeks PCsat is entering one of thoes periods. The 20 or so stations you see on the LIVE web page are probably unattended beacons. But if u hear good packets on 145.825 from PCsat during mid-day, go ahead and use it...

Fortunately it will be in 100% sun during FD, but Unfortunately, all that sun is from the side and misses the best solar panel. Experience has shown it will be useless at that time.

PCSat is a 1200-baud APRS digipeater designed for use by stations using hand-held or mobile transceivers. Downlinks feed a central web site at:
http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy under the guidance of Bob Bruninga, WB4APR.
[07092005]
=====
CUTE-1
Catalog number: 27844
Launched: June 30,2003

Status: Operational

```
Uplink:          ?
Downlink:     436.8375 CW
              437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ? )
```

Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as OPERATIONAL? Indeed it is very operational as a CUBESAT sending CW telemetry on 436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:

```
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6
```

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at 14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz. Initial orbital parameters were period 101.4 min, apogee 831 km, perigee 819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

[ANS WSR wishes to thank Cliff, K7RR, for this week's information]

=====
AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
```

(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio anand telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at: http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

SB SAT @ AMSAT <W8ISS $ANS-191.S4
WSR 191 Part 4 07/09/2005

AMSAT NEWS SERVICE BULLETIN 191.S4 FROM AMSAT HQ
SILVER SPRING, MD, JULY 09,2005
TO ALL RADIO AMATEURS
BID: $ANS-191.S4

THE FOLLOWING SATELLITES ARE NOT IN ORBIT BUT ARE PROPOSED FOR LAUNCH AT THIS TIME:

UCISAT ?O-??
Catalog number:
Proposed Launch Date: October 31, 2005

Status: Under Construction

Downlink: Submission in Progress
Uplink: Submission in Progress
Callsign: Submission in Progress

This from Matt Bennett, KF6RTB, UCISAT Communications Team Member:

Our website is www.ucisat.net .This is a new website, however, and doesn't have the "Status" section active yet. Because of the growing interest in our project, I'll push our webmaster to create updates (hopefully) on a week-to-week basis. For now, the current status of the mission is as follows:

-Expected Launch Date: October 31st, 2005
-Frequency Allocation: Submission in Progress
-Construction Status: Sub-Assembly
[WSR to thank Matt Bennett, KF6RTB, for this week's report.]
[01302005]
=====
SSETI ?O-??
Catalog Number:
Proposed Launch Date: Early 2005

Status: Under Construction

>From Graham, G3VZV:
All work on the SSETI Express spacecraft has now been completed and the spacecraft has left its "birthplace" - a cleanroom at the ESA ESTEC facility in the Netherlands. The spacecraft has been packed into its special transport
container and is en-route to the launch site at Plesetsk in Northern Russia.

The launch date is still listed as 25th August (current approx lift off is 06:50UTC but this may be corrected later) and arrangements are underway for the launch to be shown live on ASTRA-1G - a Ku band satellite covering most of Europe and, hopefully, these transmissions will also be streamed at both high and low resolution on the internet.

Full details of all these media resources will be made known as soon as they are finalised as will details of the telemetry downloading and decoding software and the prizes being offered by ESA for the largest and also the first contributor!

AMSAT-UK will have a team member at the launch site during the launch campaign and intend to provide regular updates during the lead up to August 25th.

You can find more info about SSETI at:
http://sseti.gte.tuwien.ac.at/WSW4/

Looking at the website for the SSETI Express webcam
http://sseti.gte.tuwien.ac.at/WSW4/webcam.htm

[ANS thanks Graham, G3VZV for the above information]
[07032005]
=====
PCSAT2 ?0-??
Catalog Number:
Proposed Launch Date: May 2005

PCSAT2, which had previously been stowed in the Space Shuttle Discovery, arrived at Launch Complex 39B on 07 April 2005. PCSAT2 is now standing by ready to be launched on the first Space Shuttle return-to-flight mission.

PCSAT2 will use the same dual redundant AX.25 command and control system as used on PCsat (NO-44) offering 8 on/off commands, 5 telemetry channels and a serial port for the solar cell experiment telemetry. It also supports the Digital Comms Relay support of the PCsat/APRS mission. The packet uplink is on 145.825 MHz and the default downlinks are in the 435 MHz band to avoid any possible interference with existing ARISS missions. PCSAT2 will have quad redundant transmit inhibits for EVA safety issues, thus, it is also easy to turn off to avoid any issues with other UHF ARISS experiments that may be activated in the future. Also, the mission lifetime of PCSAT2 is only 1 year, because it is a sample-return mission, thus terminating any long term conflicts in spectrum management.

The PCSAT2 mission is intended as an opportunity to augment existing ARISS communications experiments with an external autonomous communications payload. In this regard, it has several potential uses:

* A UI-Digipeater to help ease congestion on the currently shared ARISS PMS (Packet Mail system)

* A PSK-31 transponder for multi-user communications to improve accessibility for schools and ARISS outreach programs.

* An FM Voice repeater for full duplex crew communications to facilitate crew-to-school ARISS contacts.

* Routine Telemetry on the spacecraft systems

For more information and pictures visit the PCSAT2 website at
http://www.ew.usna.edu/~bruninga/pcsat2.html

[ANS thanks Bob, WB4APR for the above information]

=====

PHASE 3E ?O-??
Catalog Number:
Proposed Launch Date: Early 2006

Status: Under Construction

The AMSAT-Phase 3E satellite (P3E) is dedicated as communication and scientific platform for a highly elliptical orbit around Earth. The spacecraft will be created in a joint process together with the P5A Mars mission by an international team under leadership of AMSAT-DL and continues the successful series of AMSAT-Phase 3 satellites. Additionally the spacecraft will be a test bench for technology developped for the Mars mission. The main task of P3E is to act as communication platform for radio amateurs worldwide. A launch is planned in the period 2004 to 2006.

For the latest project status update please visit the AMSAT-DL P3-E web page:
http://www.amsat-dl.org/p3e/

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
        888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors

to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satelite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:
ans-editor{at}amsat.org

AWARD "THE FATHERS OF THE RADIO"

RULES

The section ARI of Sala Consilina (SA) ITALY, has founded the permanent award "The fathers of the radio". The purpose of the diploma is to let know the names and the work of those than before, during and after the Our Guglielmo Marconi contributed to the invention and the development of the Radio.

General requirements - Awards are available to all amateurs and SWLs for worked or heard all the 11 countries of the following list where they were born the scientists / inventors who have contributed to to the invention or the development of the radio.

Bands e Modes - All the bands assigned to the Radio Amateur Service and all the modes are allowed, satellites and WARC included.

There are 4 versions of the award:

1) HF (you must have contacted all the 11 countries)
2) 50MHZ/VHF/UHF (are enough only 6 countries to claim the award)
3) SATELLITE (are enough only 6 countries to claim the award)

Countries list:

Canada VE (Reginald Fessenden)
Croazia 9A (Nikola Tesla)
Denmark OZ (Hans Christian Orsted)
France F (Edouard Branly)
Germany DF-DK-DL-DM (Heinrich Rudolf Hertz - Karl Ferdinand Braun - Adolf Slaby)
India VU (Jagdish Chandra Bose)
England G-M (Michael Faraday - Oliver Lodge)

Italy I (Guglielmo Marconi - Augusto Righi - Temistocle Calzecchi Onesti - Luigi Galvani)
Russia RA-RZ UA-UZ (Aleksandr Popov)
Scotland GM (James Clerk Maxwell)
USA A-K-N-W (Samuel Morse - David E. Hughes - Lee De Forest - Nathan Stubblefield)

To claim the Award the QSL cards are not required but they must be in possession of the applicant and could be requested anytime for checks.

The fee is 10 Euro or 12 Dollars. To receive the Award as registered mail please add 3 Euro or 4 Dollars.

Application forms must be sent to this address:

ARI SEZIONE SALA CONSILINA
CASELLA POSTALE N.11
CAP 84036 SALA CONSILINA (SA)
ITALY

For more informations you can contact the award manager IZ8AJQ Erminio via email: iz8ajq@amsat.org

Hi,

Anyone knows on which frequencies i can hear Shuttle (not only radio amateur broadcast), but also their chat with ground control, ISS, etc.

Thanks

I have an AOR AR8200 MarkIII. I ordered it from the UK, so it's unblocked. This handheld receiver covers all frequencies from 500 KHz to 3GHz.

I live in Birmingham, Alabama; which is in north central Alabama. I have a simple question. Sitting here at home in my front yard, is there anyway for me to listen to the communications between Ground Control and the Shuttle and/or the Space Station? My exact location is Latitude: 33.57618 Longitude: -86.76385 I know I'm a newbie to this but I don't want to miss the chance to listen in on NASA communications if possible. BTW - I know a lot of websites broadcast the communications, but I want to use my own handheld receiver to listen to them, as opposed to just getting something relayed off a website. Thanks so much.

Try these:

NASA: (frequencies in kHz, USB commonly)

NASA booster rocket recovery: 2622, 11407
NASA tracking: 3385, 3395, 6983, 14456
NASA tracking vessels: 5190
NASA booster recovery vessels: 5810
NASA aircraft: 6708, 6896, 7461, 7765
NASA Kennedy operations: 7675
USAF Cape Radio: 10780, 20390
NASA Pacific operations: 11205
NASA tracking (Ascencion Island): 20186, 20191

Edwards AFB: (frequencies in MHz)

116.4	ATIS
120.7	control tower
121.8	ground control
126.1, 127.8	approach control
133.65	approach/departure control
138.45	commandpost
149.925	security
162.6125	NASA ops
164.1	NASA
173.5875	fire

236.6	control tower
269.9	ATIS
290.3	departure control
318.1	tower
348.7	approach control
372.2	dispatchers
390.1	ground control

Kennedy: (MHz)

117.8	shuttle control
121.75, 126.3	ground control
126.65	weather
142.5, 143.04	cranes
148.455	NASA booster recovery
148.485	launch countdown/status
149.175	shuttle crawler
162.0125	NASA vessels
162.6125	NASA ops
163.4625, 163.4875	security
163.5125	security
163.5625	fire - primary
164.0	radiation checks
165.1875	check points
170.15	base operations
170.175	transportation
170.35	public relations
170.40	General Services Administration
171.15	maintenance/fuel
171.2625	camera tracking
173.175	security - gates
173.4375	medics
173.5625	fire/rescue
173.6625	safety units
173.6875	security - vans
173.7875	fire - secondary
284.0	ground control

Patrick AFB: (MHz)

118.4	approach/departure control
121.7	ground control
125.1	approach control
126.2	control tower
128.8	dispatcher
138.3	command post
273.5	ATIS
335.8	ground control
340.9	approach/departure control

Try these: I have heard the shuttle in AM mode and twice have heard space suits. There is biomedical telemetry on the space suits so you can hear a heartbeat. Rumor is the space suits are/have gone to 400 MHz digital mode, so that may be no longer an option.

Shuttle frequencies: (MHz)

296.8	primary
259.7	secondary
279.0	space suits

VO-52 HAMSAT
Catalog Number: 28650
Launch Date: May 05,2005

Status: On orbit
Current Mode: U/V

Proposed frequencies:

Indian transponder:
Uplink : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacom : 145.940MHz continue carier signal

Dutch transponder:
Uplink : 435.225MHz to 435.275MHz LSB/CW
Downlink: 145.875MHz to 145.925MHz USB/CW
Beacon : 145.860MHz 12WPM with CW message

HAMSAT has been assigned the OSCAR designation VO-52.

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that So-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10 minute timer.

[09122004]

=====
FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB

Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

John, N4QWL reports on July 16th, 2005:

Last evening I had a AOS to LOS qso with WI2W. FO-29 came up at 01:17z here in FM07 and I found WI2W and we chatted until 01:33z. The satellite was at 2 degrees elevation when I finally heard him start to crackle a bit. What a great QSO! To think that I watched this bird launch back in 1996 and it is still working so well is a real thrill. I believe I still have the video. I might just look for it and watch it again. Boy do I love this satellite stuff!
Look for you all up there.

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will automatically analyze all digital telemetry from the satellite (such as current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[ANS-WSR wishes to thanks John, N4QWL for this week's report]
[07172005]

=====

AO-27 AMRAD
Catalog number: 22825
Launched: September 26, 1993

Status: Operational

Uplink: 145.850 MHz FM
Downlink: 436.795 MHz FM

The latest information on AO-27 from control operator Michael Wyrick, N3UC (former N4USI), can be found at:
http://www.ao27.org

An AO-27 question-and-answer page is available on the AMSAT-NA web site, with updates by Ray, W2RS. The URL is:
http://www.amsat.org/amsat/intro/ao27faq.html

[ANS thanks John, K6YK, for this week's AO-27 report]

=====

AO-7 AMSAT OSCAR 7
Catalog number: 07530
Launch Date: November 15, 1974

Status: Semi-operational in sunlight.
Return to active status: June 21,2002

Uplink: 145.850 to 145.950 MHz CW/USB Mode A
432.125 to 432.175 MHz CW/LSB Mode B
Downlink: 29.400 to 29.500 MHz CW/USB Mode A
145.975 to 145.925 MHz CW/USB Mode B
Beacon: 29.502 MHz, 145.972 MHz, 435.1 MHz, 2304.1 MHz

Emily, W0EEC has created a website to allow the users of AO-7 to record contacts, observations and use of the satellite more effectively at:
http://www.emilyshouse.com/experthams/ao7/main.php
This includes the ability to log contacts.

Tim, K3TZ has written a program to decode AO-07 telemetry.
The program can be downloaded at:
http://www.qsl.net/k3tz/files/K3TZ_AO-07_Telemetry_Decoder_0.5.zip

For more AO-7 info:
http://www.amsat.org/amsat/sats/n7hpr/ao7.html
[11142004]
=====
INTERNATIONAL SPACE STATION (ISS) - ARISS
Catalog number: 25544
Launch date: November 20, 1998

Status: Operational
Current Mode: Packet (APRS-style connections)
Digipeater: Active

The current Expedition 11 crew is:
Commander Sergei Krikalev
Flight Engineer John Phillips

Worldwide packet uplink: 145.990 MHz FM
Region 1 voice uplink: 145.200 MHz FM
Region 2/3 voice uplink: 144.490 MHz FM
Worldwide downlink: 145.800 MHz FM

Repeater Uplink: 437.800 MHz FM
Repeater Downlink: 145.800 MHz FM
Doppler Shift is 10 KHz

Russian callsigns: RS0ISS, RZ3DZR
USA callsign: NA1SS
Packet station mailbox callsign: RS0ISS-11
Packet station keyboard callsign: RS0ISS-3
Digipeater callsign: ARISS

Dave, IO80SM reports:
What a nice surprise to hear the I.S.S. UHF/VHF repeater operational earlier this evening.

I heard an EI mobile and Jean F6HCC.
(Called you Jean, but guess you didn't hear me/it)

Nothing heard at all from the ISS during the last pass over the UK though.

This off the ARISS webpage: <
http://www.rac.ca/ariss/oindex.htm#New%20ARISS%20Operations > :
The ARISS program is pleased to announce that the amateur radio equipment aboard the International Space Station is now operating in cross-band repeat mode. We realize that many of you will miss the packet-operating mode. However, cross-band repeat allows further experimentation of the ISS amateur radio system

The downlink for this operating mode remains the same, so listen for the station on 145.80 MHz. The new uplink frequency is 437.80 MHz. All frequencies are subject to Doppler shifting. For further information on working satellites and adjusting for Doppler shift, please review Emily Clark's (W0EEC) excellent presentation on AMSAT's website:
http://www.amsat.org/amsat-new/information/faqs/Intro_sats.pdf

The ISS daily crew schedule can be found at:
http://spaceflight.nasa.gov/station/timelines/
Remember that the crew operates on UTC time. Also, all of the time line is NOT translated from Russian and posted.

=====
NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Non-Operational?????

Uplink/downlink: 145.827 MHz 1200 baud AX.25 AFSK via W3ADO-1
Aux/Uplink: 435.250 MHz 9600 baud via PCSAT-2 (off)

APRS Downlink: 144.390 MHz (Region 2)

This from Bob, WB4APR:
PCsat returned to negative-power-budget mode on 16 Feb 2005 and is not expect- ed to be restorable until the next full-sun period in the Fall when the southern Sun can better illuminate the south facing panel. Between now and then you are welcome to try to get a packet digipeated, but this will usually only work during mid-day passes in the Northern Hemisphere due to sun angles.

Question asked of Bob WB4APR recently on the amsat-bb:
Is it alive?? I was just looking at the pcsat.aprs.org page at Findu and it shows a lot of stations recently (within the last day) digipeating through it.

Bob's reply:
PCsat is always "alive", but can only muster enough power to get out a complete packet when it is in near mid-day sun in the Northern hemisphere the higher the latitude the better in the summer.

Over the next 2 weeks PCsat is entering one of thoes periods. The 20 or so stations you see on the LIVE web page are probably unattended beacons. But if u hear good packets on 145.825 from PCsat during mid-day, go ahead and use it...

Fortunately it will be in 100% sun during FD, but Unfortunately, all that sun is from the side and misses the best solar panel. Experience has shown it will be useless at that time.

PCSat is a 1200-baud APRS digipeater designed for use by stations using hand-held or mobile transceivers. Downlinks feed a central web site at:
http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy under the guidance of Bob Bruninga, WB4APR.
[07092005]
=====
CUTE-1
Catalog number: 27844
Launched: June 30,2003

Status: Operational

Uplink: ?
Downlink: 436.8375 CW
              437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ?)
Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as OPERATIONAL? Indeed it is very operational as a CUBESAT sending CW telemetry on 436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:

```
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6
```

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at 14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz. Initial orbital parameters were period 101.4 min, apogee 831 km, perigee 819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

[ANS WSR wishes to thank Cliff, K7RR, for this week's information]

AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio anand telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at:
http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

AMSAT NEWS SERVICE BULLETIN 198.S4 FROM AMSAT HQ
SILVER SPRING, MD, JULY 17,2005
TO ALL RADIO AMATEURS
BID: $ANS-198.S4

THE FOLLOWING SATELLITES ARE NOT IN ORBIT BUT ARE
PROPOSED FOR LAUNCH AT THIS TIME:

UCISAT ?O-??
Catalog number:
Proposed Launch Date: October 31, 2005

Status: Under Construction

Downlink: Submission in Progress
Uplink: Submission in Progress
Callsign: Submission in Progress

This from Matt Bennett, KF6RTB, UCISAT Communications Team Member:

Our website is www.ucisat.net .This is a new website, however, and doesn't have the "Status" section active yet. Because of the growing interest in our project, I'll push our webmaster to create updates (hopefully) on a week-to-week basis. For now, the current status of the mission is as follows:

-Expected Launch Date: October 31st, 2005
-Frequency Allocation: Submission in Progress
-Construction Status: Sub-Assembly
[WSR to thank Matt Bennett, KF6RTB, for this week's report.]
[01302005]
=====
SSETI ?O-??
Catalog Number:
Proposed Launch Date: Early 2005

Status: Under Construction

SpaceDaily has a report about SSETI at:
http://www.spacedaily.com/news/internet-04zzzu.html

You can find more info about SSETI at:
http://sseti.gte.tuwien.ac.at/WSW4/

Looking at the website for the SSETI Express webcam
http://sseti.gte.tuwien.ac.at/WSW4/webcam.htm

[ANS thanks Graham, G3VZV and JoAnne, WB9JEJ for the above information]
[07172005]
=====
PCSAT2 ?0-??
Catalog Number:
Proposed Launch Date: May 2005

PCSAT2, which had previously been stowed in the Space Shuttle Discovery, arrived at Launch Complex 39B on 07 April 2005. PCSAT2 is now standing by ready to be launched on the first Space Shuttle return-to-flight mission.

PCSAT2 will use the same dual redundant AX.25 command and control system as used on PCsat (NO-44) offering 8 on/off commands, 5 telemetry channels and a serial port for the solar cell experiment telemetry. It also supports the Digital Comms Relay support of the PCsat/APRS mission. The packet uplink is on 145.825 MHz and the default downlinks are in the 435 MHz band to avoid any possible interference with existing ARISS missions. PCSAT2 will have quad redundant transmit inhibits for EVA safety issues, thus, it is also easy to turn off to avoid any issues with other UHF ARISS experiments that may be activated in the future. Also, the mission lifetime of PCSAT2 is only 1 year, because it is a sample-return mission, thus terminating any long term conflicts in spectrum management.

The PCSAT2 mission is intended as an opportunity to augment existing ARISS communications experiments with an external autonomous communications payload. In this regard, it has several potential uses:

* A UI-Digipeater to help ease congestion on the currently shared ARISS PMS (Packet Mail system)

* A PSK-31 transponder for multi-user communications to improve accessibility for schools and ARISS outreach programs.

* An FM Voice repeater for full duplex crew communications to facilitate crew-to-school ARISS contacts.

* Routine Telemetry on the spacecraft systems

For more information and pictures visit the PCSAT2 website at
http://www.ew.usna.edu/~bruninga/pcsat2.html

[ANS thanks Bob, WB4APR for the above information]
[04102005}
=====
PHASE 3E ?O-??
Catalog Number:
Proposed Launch Date: Early 2006

Status: Under Construction

William Leijenaar, PE1RAH reports on July 16th, 2005:

Hi AMSATs,

I always like to inform the AMSATs public about my P3e work, but unfortunatly due to
some reasons there was not much time and nothing much to say...

However, now I am happy to announce that the my MODE-UV transponder design for P3e is ready at the P3e integration place in Marburg (Germany). About 4 weeks ago I was in Marburg before, where the transponder has been checked. Unfortunatly some unsure things were found in the design. The unsure things were about long term stability after many years in space.

At home in The Netherlands, I changed the design with some minor changes to have a secure long term stability. Finally I tested the transponder again and it performed well within the specifications. Again something learned for future transponder designs :o)

Last Wednesday I drove to AMSAT-DL P3e integrations place in Marburg again, and have my transponder again checked. In the beginning it seemed that the 70cm receiver lost 10dB in sensetivity. After some more measurements we find out that it was due to a bad attenuator we used for protection at the input.

Together with Karl Meinzer we looked for any problems, but so far we could see (without HELAPS) all was okay. In the afternoon I went back home again, this time without the MODE-UV.

Now the MODE-UV will get a new home, the home of P3e... :o)
I hope the transponder will work like its elder sister in AO-10, and you all will enjoy it for many years...

It was lots of work to get it this far, but I know it is for a good purpose...

For the latest project status update please visit the AMSAT-DL
P3-E web page:
http://www.amsat-dl.org/p3e/

[ANS-WSR wishes to thank William Leijenaar, PE1RAH for this week's report]

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live
radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz.

Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
        888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satelite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:

AMSAT-NA Symposium Registration Now Online

AMSAT News Service Bulletin 198.01
From AMSAT HQ SILVER SPRING, MD.
July 17, 2005
To All RADIO AMATEURS
BID: $ANS-198.01

Registration for the 2005 AMSAT Space Symposium is now available on-line. The Symposium will be held October 7-9 at the Holiday Inn Holidome in downtown Lafayette, LA. Information can be found on the Symposium web page at: http://www.amsat.org/amsat-new/symposium/

In addition to downloading the registration form, for the first time attendees can now register online through the AMSAT store. Registration forms will also be mailed out with the annual ballots for the AMSAT board of directors. Please see the AMSAT Store registration for more information: http://www.amsat-na.com/SymposiumReg.php

Registration for the Annual Banquet, the Friday Night Shrimp Boil and the Sunday Swamp Tour can all be done at the time you register for the Symposium.

Huygens - A First Look at Titan

AMSAT-UK is privileged to have Professor John Zarnecki Principal Investigator for the Surface Science Package on Huygens giving the keynote presentation at the International Space Colloquium to be held at the University of Surrey, Guildford, England from 29th - 31st July.

Professor John Zarnecki's presentation on Friday July 29th will describe the journey of the Huygens probe as well as its final dramatic plunge to the surface of Titan.

Day passes to the event cost �12:50. If required, overnight accomodation and meals at the University are available. For further details contact Sophie Haigh; Email: s.haigh@sstl.co.uk
Tel: +44 (0)1483 689888

Guildford is close to both London-Heathrow and London-Gatwick airports.

For full details of the programme see:
    http://www.uk.amsat.org/Colloquium/

[ANS thanks Jim, G3WGM, and Trevor, M5AKA for the above information]

SB SAT @ AMSAT $ANS-198.03
SSETI Express July Update

AMSAT News Service Bulletin 198.03
From AMSAT HQ SILVER SPRING, MD.
July 17, 2005
To All RADIO AMATEURS
BID: $ANS-198.03

All work on the SSETI Express spacecraft has now been completed and thespacecraft has left its "birthplace" - a cleanroom at the ESA ESTEC facility in the Netherlands. The spacecraft has been packed into its special transport container and is en-route to the launch site at Plesetsk in Northern Russia.

The launch date is still listed as 25th August currently at 06:50 UTC. Arrangements are underway for the launch to be shown live on ASTRA-1G, a Ku band satellite covering most of Europe. Hopefully, these transmissions will also be streamed at both high and low resolution on the internet.

Full details of all these media resources will be made known as soon as they are finalised. Details of the telemetry downloading and decoding software will be released.

AMSAT-UK will have a team member at the launch site during the launch campaign and intend to provide regular updates during the lead up to August 25th.

See the latest SSETI news on the ESA web page at:
http://www.esa.int/esaCP/SEMPQH6DIAE_index_0.html

[ANS thanks Graham G3VZV for the above information]

/EX

SB SAT @ AMSAT $ANS-198.04
PCSAT2 Planned for Launch on STS-114

AMSAT News Service Bulletin 198.04
From AMSAT HQ SILVER SPRING, MD.
July 17, 2005

To All RADIO AMATEURS
BID: $ANS-198.04

When STS-114 lifts off it will be carrying an amateur radio payload called MISSE5/PCSAT2. This will be placed on the exterior of the ISS during the third space walk of the mission. More information is available on-line at:
http://web.usna.navy.mil/~bruninga/pcsat2.html

Dave Johnson, G4DPZ, is developing the PCSat2 telemetry web site:
http://www.pcsat2.info

This late-beta test page is currently displaying channel telemetry generated by a simulator which refreshes every 10 seconds approximating the speed when it is under command conditions.

Additional items currently planned include:
- Graphical Channel History
- WOD feed (csv file probably)
- League table of telemetry providers
- RealTime Eclipse status

PCSAT2 is attached to the ISS and so its operations must be in cooperation with the ARISS communications suite to minimize any mutual interference and to coordinate activities. Here are the capabilities of the PCSAT2 payload:

PCSAT SYSTEM A:

435.275 PCSAT2 DOWNLINK basic 1200 baud telemetry (nominally 1 packet per minute)
435.275 PCSAT2 DOWNLINK User packet digipeater from uplink on 145.825
435.275 PCSAT2 DOWNLINK Occasional user PSK-31 continuous downlink (7 minutes max each time)

145.825 PCSAT2 UP/DOWN User packet digipeater up/down on 145.825

PCSAT SYSTEM B:

437.975 PCSAT2 DOWNLINK periodic Solar Cell data and PCSAT2 telemetry at 9600 baud
437.975 PCSAT2 DOWNLINK TNC-B command downlink at 1200 baud
437.975 PCSAT2 DOWNLINK User Voice Repeater with VHF uplink

[ANS thanks Bob, WB4APR and Dave, G4DPZ for the above information]

SB SAT @ AMSAT $ANS-198.05
Update Your Keps - ISS Orbit Modified

AMSAT News Service Bulletin 198.05

From AMSAT HQ SILVER SPRING, MD.
July 17, 2005
To All RADIO AMATEURS
BID: $ANS-198.05

If you have not updated your Keplerian Elements recently your tracking of the ISS may be off.

In preparation of the Space Shuttle's Return to Flight the ISS received one final reboost to increase the Station's altitude for its upcoming rendezvous with Space Shuttle Discovery.

Last week the engines of a Progress spacecraft docked to the Station were commanded to burn for 7 minutes and 20 seconds, boosting the altitude of the Station nearly 4 miles. This second and final reboost puts the Station into position for rendezvous opportunities beginning on the third flight day during most of Discovery's July 13-31 launch window.

[ANS thanks Jacques van Oene for the above information]

/EX

SB SAT @ AMSAT $ANS-198.06
ARISS Status - Week of July 11, 2005

AMSAT News Service Bulletin 198.06
From AMSAT HQ SILVER SPRING, MD.
July 17, 2005
To All RADIO AMATEURS
BID: $ANS-198.06

1. Upcoming School Contacts

The shuttle STS-114 Return to Flight mission is slated to launch in July and to dock with the ISS. School contacts have been submitted for approval, and will resume as soon as the ISS schedule allows.

2. SuitSat Status

The ARISS-Russia team received the U.S. supplied hardware, and is working on its integration and testing. The team is currently compiling the documentation necessary for certifying the SuitSat hardware for flight.

3. PCSAT2/MISSE5 to Fly on STS-114

As part of an educational outreach program, students at the United States Naval Academy, in collaboration with the DOD and ARISS, and under the direction of Bob Bruninga, WB4APR, designed and developed PCSAT2. This payload will be carried on a Materials

International Space Station Experiment (MISSE5) on a Passive Experiment Container (PEC). The PEC (suitcase) will be opened and will carry DOD solar cells on the front side, facing the sun, and the back side will carry the amateur satellite communications system which will include Automatic Position Reporting System (APRS) Packet, FM voice repeater, and 10m PSK-31 transponder. The payload will be launched on the Return to Flight STS-114 mission. It will be deployed via an EVA as an external payload on the ISS. It will be turned on during the EVA, and become operational 8.5 hours later when its safety timer allows. This project is described in detail on Bruninga's website, "PCSAT2 - External ISS Experiment in the Amateur Satellite Service."
See: <http://www.ew.usna.edu/~bruninga/pcsat2.html>

4. NES Teacher Workshop

A NASA Explorer School Satellite Communication Class will be held at Goddard Space Flight Center during the week of July 18. Orbital elements, how to set up a station, and how to communicate with the ISS will be addressed. In addition, the ARISS -U.S. team at GSFC may schedule some amateur radio time to demonstrate the usefulness of radios in the classroom.

5. Astronaut Training

On Friday, July 8, Kenneth Ransom gave astronaut John Grunsfeld, KC5ZTF, an overview of the ARISS radio system and operations. Grunsfeld is a backup for the Expedition 13 crew.

6. ARISS International Meeting, Guilford, U.K.

Preparations continue for the ARISS International Face-to-Face Meeting which will be held at the University of Surrey in Guilford, U.K. Delegates are currently drafting the agenda for the August 1 - 2 conference.

7. ISS Ham Training Manual

ARISS member Dave Taylor has been working on an SSTV manual for the ISS Ham system. He has submitted the final version to Kenneth Ransom at JSC to be uplinked to the ISS.

8. Space Tourist Resumes Training

Greg Olsen of Sensors Unlimited has resumed his training for spaceflight. He made arrangements through Space Adventures to begin training last fall and stopped due to a medical condition, but has now returned to Star City and is training with the Expedition 12 crew. As the next space tourist, Olsen has expressed an interest in participating in several ARISS school contacts.

[ANS thanks Carol Jackson, KB3LKI, for the above information]

SB SAT @ AMSAT $ANS-198.07
AMSAT-Italia Developing Ionosfera

AMSAT News Service Bulletin 198.07
From AMSAT HQ SILVER SPRING, MD.
July 17, 2005
To All RADIO AMATEURS
BID: $ANS-198.07

AMSAT-Italia is currently developing the "Ionosfera" project which aims at supporting the DX Community in predicting the ionosphere propagation conditions.

The project is developed in the framework of European Space Agency's (ESA) programme on "Space Weather" and can be visited at:
http://esa-spaceweather.net/sda/ionosfera/index2.htm

Please have a look, make suggestions and forward the link to other potentially interested people.

One of the things we are trying to do is to correlate the DX activity with the various Space Weather indices. For this we are looking for HF DX logs (best in electronic files) covering the period 01-Sept-2003 through 30-Apr-2005.

Should you or your friends be active on HF DX, could you please support us by providing as many as possible log files? In addition to analysing the data globally, we thank our various contributors by characterising their own location with respect to the Space Weather conditions.

[ANS thanks Florio, IW2NMB, coordinator of the Ionosfera project for the above information]

/EX

SB SAT @ AMSAT $ANS-198.08
Delft University of Technology Announces Delfi-C3

AMSAT News Service Bulletin 198.08
From AMSAT HQ SILVER SPRING, MD.
July 17, 2005
To All RADIO AMATEURS
BID: $ANS-198.08

A group of students from the Department of Aerospace Engineering and Electrical Engineering of Delft University of Technology is developing a new Dutch satellite. Scheduled for launch in 2006, it will be the first university satellite to be flown for the Netherlands.

The Delfi-C3 communications subsystem will operate in the VHF and UHF amateur radio frequency bands enabling radio amateurs worldwide to receive satellite data using a modest equipment setup.

The EEMCS Faculty is developing an advanced transceiver, combining miniaturization with a high DC to RF efficiency and the capability to adapt to different channel conditions. Since transmitting payload data is of utmost importance for the whole mission, the communications subsystem is set up as a dual redundant system, with an AMSAT platform as backup.

Besides transmitting telemetry data, both systems are capable of providing a linear transponder service to the amateur radio community as a returned favor for use of amateur frequencies and their assistance with the telemetry data collection.

For all interested radio amateurs and other people related to the project the team has made the first Delfi-C3 newsletter available at
http://www.delfic3.nl/newsletter

You can subscribe to this issue of the newsletter and future ones.

[ANS thanks Wouter Jan Ubbels, PE4WJ, of the Delfi-C3 team for the above information]

Membership Challenge Successful, Thank-you WA6FWF and KE9V

AMSAT News Service Bulletin 198.10
From AMSAT HQ SILVER SPRING, MD.
July 17, 2005
To All RADIO AMATEURS
BID: $ANS-198.10

Barry Baines, WD4ASW, AMSAT's VP of Marketing and User Services, reports the membership challenge made by Kevin Schuchmann, WA6FWF to match new membership dues with an equal contribution (up to a total of $1,000.00) in a two week period has been met. A total of 23 AMSAT memberships have been generated since Kevin's appeal on June 27. Most of these are new members (15). However, the other eight individuals are former members with expiration dates going as far back as 10-12 years.

Many thanks to Kevin for promoting this membership appeal and welcome aboard to those that have joined AMSAT in the past two weeks.

Barry commended Jeff Davis, KE9V, for his support in the AMSAT membership drive. Barry wrote, "Many thanks for your support of AMSAT in a very imaginative and helpful way. When Kevin Schuchmann, WA6FWF, initiated the Membership Challenge that resulted in 23 AMSAT memberships in a two-week period, you stepped forward with a commitment to cover the cost of providing a copy of the AMSAT publication "Getting Started with Amateur Satellites" (written by Gould Smith, WA4SXM) to each individual who became an AMSAT member as a result of the Challenge. Not only did your actions reinforce the desire to help our newest members, but it serves as a great example of an AMSAT member taking the initiative to come up with a great way to build support for AMSAT.   Thank you for taking this opportunity to make a difference for AMSAT."

[ANS thanks Barry, WD4ASW, for the above information]

SB SAT @ AMSAT $ANS-198.12
P3E Mode-UV Transponder Milestone

AMSAT News Service Bulletin 198.12
From AMSAT HQ SILVER SPRING, MD.
July 17, 2005
To All RADIO AMATEURS
BID: $ANS-198.12

William, PE1RAH, developer of the Dutch transponder on the Indian HAMSAT, reports, "I am happy to announce that my MODE-UV transponder design for P3E has completed its initial testing and has been delivered to AMSAT-DL's integration lab at Marburg, Germany. I hope the transponder will work like its elder sister on AO-10, and you all will enjoy it for many years."

[ANS thanks William, PE3RAH, for the above information]

/EX

Hello everyone,

I would greatly appreciate any advice in subject of choosing a vertical
antenna for satellite operations. I can hear VO-52 / FO-29 5-7 / 5-9
using my mobile antenna NR 770 H fix on a mast 9ft above the ground.

I am cosidering builing a Super J-Pole antenna.
http://www.n7qvc.com/amateur_r adio/copper.html

Do you think that this vertical will be sufficient to bounce 50W of
signal back to Earth of the satellite ? If not , what other homebrew
antenna will be fine for this purpose ?

Thank you for your helpful response .

Phil

AMSAT NEWS SERVICE
ANS-205

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating

through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:
ans-editor@amsat.org

In this edition:

- ARISS Status Report
- SSETI Express readied for August 25 Launch
- Earliest Shuttle Launch Posibility
- AMSAT Symposium
- Ballots in the mail
- Crossband Repeater on ISS

SB SAT @ AMSAT $ANS-205.01
ISS Status Report 7/18/05

AMSAT News Service Bulletin 205.01
From AMSAT HQ SILVER SPRING, MD.
July 18, 2005
To All RADIO AMATEURS
BID: $ANS-205.01

ARISS Status
July 18, 2005

1. Upcoming School Contacts

The shuttle STS-114 Return to Flight mission has been delayed. School contacts have been submitted for approval, and will resume as soon as the ISS schedule allows.

2. NES Teacher Workshop

A NASA Explorer School (NES) Satellite Communication Class will be held at Goddard Space Flight Center this week. Two one hour sessions have been scheduled for the teachers with ARISS team members. An introduction to Amateur Radio and ARISS will be given during the first hour, and orbital elements, prediction programs, and how to track the ISS and shuttle will be addressed during the second session. There is the possibility of an ARISS contact being scheduled for the teachers during the week (depending on when the shuttle launches) which will give them an idea of how to incorporate the ARISS program in their own curricula.

3. SuitSat Status

The ARISS-Russia team continues to work on the SuitSat hardware integration and testing. The team is compiling documentation necessary for flight certification of the SuitSat hardware.

4. ARRL Article on Return to Flight Mission

ARRL ran an article on the STS-114 Return to Flight mission which includes the PCSAT2 status. The story, "Amateur Licensees among Shuttle Discovery Crew; PCSat2 Installation Set," may be found at:
http://www.arrl.org/news/stories/2005/07/12/3/?nc=1

5. PCSAT2/MISSE5 to Fly on STS-114

PCSAT2 will fly on the Return to Flight STS-114 mission, which may launch this week. It will be deployed via an EVA as an external payload on the ISS. This project is described in detail on Bruninga's website, "PCSAT2 - External ISS Experiment in the Amateur Satellite Service."
See: http://www.ew.usna.edu/~bruninga/pcsat2.html

6. ARISS International Meeting, Guildford, U.K.

Preparations continue for the ARISS International Face-to-Face Meeting which will be held at the University of Surrey in Guildford, U.K. The agenda for the August 1 - 2 conference has been released. Information on the AMSAT-UK Colloquium and the ARISS International Meeting may be found on the following website: http://www.uk.amsat.org/Colloquium/default.php

Shuttle Launch earliest possibility is next week

AMSAT News Service Bulletin 205.03
From AMSAT HQ SILVER SPRING, MD.
July 19, 2005
To All RADIO AMATEURS
BID: $ANS-205.03

NASA'S SHUTTLE LAUNCH AT LEAST ONE WEEK AWAY

NASA is targeting Tuesday, July 26 as the earliest possible date to launch the Space Shuttle Discovery on the Return to Flight mission (STS-114). The determination was made during Monday's meeting of the Mission Management Team (MMT) at Kennedy.

The MMT reviewed efforts by teams of engineers. The engineers are working through a troubleshooting plan to address an issue with a liquid hydrogen low-level fuel sensor circuit. The sensor circuit failed a routine pre-launch check during the countdown July 13, delaying Discovery's first launch attempt.

NASA is still working to launch Discovery by the end of the July window that extends to the 31st. A dozen teams, with hundreds of engineers across the country, are expected to complete their battery of tests by Wednesday. While they have not isolated a cause of the sensor circuit failure, they have eliminated a number of possibilities. If the remaining tests are inconclusive, NASA could reload the External Tank with super-cooled propellants to see how the sensor circuit behaves. The tanking could be done as a test or as part of an actual launch countdown.

Commander Eileen Collins and her six Discovery crew mates come out of quarantine today for one day off. They resume quarantine and training later this week.
For the latest information about STS-114 on the Web, visit:

http://www.nasa.gov/returntoflight

[ANS thanks Arthur, N1ORC for the above information]

SB SAT @ AMSAT $ANS-205.06
Crossband Repeater on ISS

AMSAT News Service Bulletin 205.06
From AMSAT HQ SILVER SPRING, MD.
July 24, 2005
To All RADIO AMATEURS
BID: $ANS-205.06

ISS CROSSBAND REPEATER IS ON

The ISS cross-band or U/V repeater is ON.
Downlink is 145.800
Uplink is 437.800 � 10 KHz doppler

Please keep in mind that the crew may be listening and may pick up their microphone.

Complete instructions on the Doppler correction for the ISS crossband repeater are posted at http://www.rac.ca/ariss/.

The ISS repeater does not use any PL to access the machine. Just remember to do the Doppler correction for the 70cm band especially.

Charlie, AJ9N, one of the ARISS mentors wrote, "The better the antenna the better you will be able to access the repeater and enjoy longer time per pass. Yes, you can get in with a simple vertical, but it may be only for 3 or 4 minutes of a 10 minute pass".

Cor, PD0RKC, has put together a lot of useful info for ISS and how to work ISS's repeater on his webpage:
http://pd0rkc.mine.nu/issdoppler.html

[ANS thanks Charlie, AJ9N, and Scott, WA6LIE, for the above information]

=====

SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating
procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that SO-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz. The
order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm
   the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT
   the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window
   will reset the 10 minute timer.

[09122004]
=====
FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: OPERATIONAL

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

John, N4QWL reports on July 16th, 2005:

Last evening I had a AOS to LOS qso with WI2W. FO-29 came up at 01:17z here in FM07 and I found WI2W and we chatted until 01:33z. The satellite was at 2 degrees elevation when I finally heard him start to crackle a bit. What a great QSO! To think that I watched this bird launch back in 1996 and it is still working so well is a real thrill. I believe I still have the video. I might just look for it and watch it again. Boy do I love this satellite stuff!
Look for you all up there.

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will automatically analyze all digital telemetry from the satellite (such as current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[ANS-WSR wishes to thanks John, N4QWL for this week's report]
[07172005]
=====
AO-27 AMRAD
Catalog number: 22825
Launched: September 26, 1993

Status: Operational

Uplink: 145.850 MHz FM
Downlink: 436.795 MHz FM

The latest information on AO-27 from control operator Michael Wyrick, N3UC (former N4USI), can be found at:
http://www.ao27.org

An AO-27 question-and-answer page is available on the AMSAT-NA web site, with updates by Ray, W2RS. The URL is:
http://www.amsat.org/amsat/intro/ao27faq.html

[ANS-WSR thanks John, K6YK, for this week's AO-27 report]
[08292004]

=====

AO-7 AMSAT OSCAR 7
Catalog number: 07530
Launch Date: November 15, 1974

Status: Semi-operational in sunlight.
Return to active status: June 21,2002

Uplink: 145.850 to 145.950 MHz CW/USB Mode A
432.125 to 432.175 MHz CW/LSB Mode B
Downlink: 29.400 to 29.500 MHz CW/USB Mode A
145.975 to 145.925 MHz CW/USB Mode B
Beacon: 29.502 MHz, 145.972 MHz, 435.1 MHz, 2304.1 MHz

Emily, W0EEC has created a website to allow the users of AO-7 to record contacts, observations and use of the satellite more effectively at:
http://www.emilyshouse.com/experthams/ao7/main.php
This includes the ability to log contacts.

Tim, K3TZ has written a program to decode AO-07 telemetry.
The program can be downloaded at:
http://www.qsl.net/k3tz/files/K3TZ_AO-07_Telemetry_Decoder_0.5.zip

For more AO-7 info:
http://www.amsat.org/amsat/sats/n7hpr/ao7.html

=====

INTERNATIONAL SPACE STATION (ISS) - ARISS
Catalog number: 25544
Launch date: November 20, 1998

Status: Operational
Current Mode: U/V CROSS-BAND REPEATER
Digipeater: Inactive

The current Expedition 11 crew is:
Commander Sergei Krikalev
Flight Engineer John Phillips

Worldwide packet uplink: 145.990 MHz FM
Region 1 voice uplink: 145.200 MHz FM
Region 2/3 voice uplink: 144.490 MHz FM
Worldwide downlink: 145.800 MHz FM

Repeater Uplink: 437.800 MHz FM
Repeater Downlink: 145.800 MHz FM
Doppler Shift is 10 KHz

Russian callsigns: RS0ISS, RZ3DZR
USA callsign: NA1SS
Packet station mailbox callsign: RS0ISS-11
Packet station keyboard callsign: RS0ISS-3
Digipeater callsign: ARISS

This off the ARISS webpage:
< http://www.rac.ca/ariss/oindex.htm#New%20ARISS%20Operations > :
The ARISS program is pleased to announce that the amateur radio equipment aboard the International Space Station is now operating in cross-band repeat mode. We realize that many of you will miss the packet-operating mode. However, cross-band repeat allows further experimentation of the ISS amateur radio system

The downlink for this operating mode remains the same, so listen for the station on 145.80 MHz. The new uplink frequency is 437.80 MHz. All frequencies are subject to Doppler shifting. For further information on working satellites and adjusting for Doppler shift, please review Emily Clark's (W0EEC) excellent presentation on AMSAT's website:
http://www.amsat.org/amsat-new/information/faqs/Intro_sats.pdf

The ISS daily crew schedule can be found at:
http://spaceflight.nasa.gov/station/timelines/
Remember that the crew operates on UTC time. Also, all of the time line is NOT translated from Russian and posted.

=====
NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Non-Operational?????

Uplink/downlink: 145.827 MHz 1200 baud AX.25 AFSK via W3ADO-1
Aux/Uplink: 435.250 MHz 9600 baud via PCSAT-2 (off)
APRS Downlink: 144.390 MHz (Region 2)

PCSat is a 1200-baud APRS digipeater designed for use by stations using hand-held or mobile transceivers. Downlinks feed a central web site at: http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy under the guidance of Bob Bruninga, WB4APR.
[07242005]

=====
CUTE-1
Catalog number: 27844
Launched: June 30,2003

Status: Operational

Uplink: ?
Downlink: 436.8375 CW

437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ?)
Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as OPERATIONAL?
Indeed it is very operational as a CUBESAT sending CW telemetry on 436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at 14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz. Initial orbital parameters were period 101.4 min, apogee 831 km, perigee 819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

[ANS WSR wishes to thank Cliff, K7RR, for this week's information]

=====
AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS e.V." (German acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule", which means: 'working group for amateur radio anand telecommunications in schools'). AO-49 is designed as a "store and broadcast" system for APRS based messages, dedicated for the use of schools in combination with the existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears AO-49 is not properly aligned to illuminate the solar panels. This should end soon. Due to its orbit, AO-49 will be in a phase without eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to allow decoding of the received DATA0 frames. It is available at: http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:

http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

Proposed Launch Date: May 2005

Status: Awaiting launch of STS-114

PCSAT2, which had previously been stowed in the Space Shuttle Discovery, arrived at Launch Complex 39B on 07 April 2005. PCSAT2 is now standing by ready to be launched on the first Space Shuttle return-to-flight mission.

PCSAT2 will use the same dual redundant AX.25 command and control system as used on PCsat (NO-44) offering 8 on/off commands, 5 telemetry channels and a serial port for the solar cell experiment telemetry. It also supports the Digital Comms Relay support of the PCsat/APRS mission. The packet uplink is on 145.825 MHz and the default downlinks are in the 435 MHz band to avoid any possible interference with existing ARISS missions. PCSAT2 will have quad redundant transmit inhibits for EVA safety issues, thus, it is also easy to turn off to avoid any issues with other UHF ARISS experiments that may be activated in the future. Also, the mission lifetime of PCSAT2 is only 1 year, because it is a sample-return mission, thus terminating any long term conflicts in spectrum management.

The PCSAT2 mission is intended as an opportunity to augment existing ARISS communications experiments with an external autonomous communications payload. In this regard, it has several potential uses:

* A UI-Digipeater to help ease congestion on the currently shared ARISS PMS (Packet Mail system)

* A PSK-31 transponder for multi-user communications to improve accessibility for schools and ARISS outreach programs.

* An FM Voice repeater for full duplex crew communications to facilitate crew-to-school ARISS contacts.

* Routine Telemetry on the spacecraft systems

For more information and pictures visit the PCSAT2 website at
http://www.ew.usna.edu/~bruninga/pcsat2.html

[ANS thanks Bob, WB4APR for the above information]

PHASE 3E ?O-??
Catalog Number:
Proposed Launch Date: Early 2006

Status: Under Construction

William Leijenaar, PE1RAH reports on July 16th, 2005:

Hi AMSATs,

I always like to inform the AMSATs public about my P3e work, but
unfortunatly due to
some reasons there was not much time and nothing much to say...

However, now I am happy to announce that the my MODE-UV transponder design for P3e is ready at the P3e integration place in Marburg (Germany). About 4 weeks ago I was in Marburg before, where the transponder has been checked. Unfortunatly some unsure things were found in the design. The unsure things were about long term stability after many years in space.

At home in The Netherlands, I changed the design with some minor changes to have a secure long term stability. Finally I tested the transponder again and it performed well within the specifications. Again something learned for future transponder designs :o)

Last Wednesday I drove to AMSAT-DL P3e integrations place in Marburg again, and have my transponder again checked. In the beginning it seemed that the 70cm receiver lost 10dB in sensetivity. After some more measurements we find out that it was due to a bad attenuator we used for protection at the input.

Together with Karl Meinzer we looked for any problems, but so far we could see (without HELAPS) all was okay. In the afternoon I went back home again, this time without the MODE-UV.

Now the MODE-UV will get a new home, the home of P3e... :o)
I hope the transponder will work like its elder sister in AO-10, and you all will enjoy it for many years...

It was lots of work to get it this far, but I know it is for a good purpose...

For the latest project status update please visit the AMSAT-DL
P3-E web page:
http://www.amsat-dl.org/p3e/

[ANS-WSR wishes to thank William Leijenaar, PE1RAH for this week's report]

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
        888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satelite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:
ans-editor{at}amsat.org

Rocketeer,

Thank you for the link. I'm seriously considering a constuction of Eggbeater2.

I'm not clear about one thing ==> On top, where the loops are crossing eachother, are they positioned directly one on top of the other ? or there is a small (known ?) amout of space ?

How about the reflectors, if there are crossing the boom , they must be spaced out . Do we know by how much ? b/c I'm sure that matters.

Thank you again.

Phil

The loops "touch" each other at the top and bottom, think two cubes one inside the other at 90 degree separation looking from the top, like an old fashion "eggbeater".   On the reflectors the measurement is documented how far below the loops they should be placed, also the reflectors "touch" each other at the mast, much like a "ground plane" on a vertical antenna, and have about 90 degree separation between reflector elements. I am sure the author of the site, K5OE would be glad to provide more information on the "eggbeaters".

M-2 makes these antennas, but run about $150.00 each the last I looked. The M-2 is shaped more like two spheres inside each other. One ham had the M-2 VHF and UHF on separate masts at field day, mounted on top of his motor home on each end of the roof, they worked really well.

Good luck,

rocketeer

I'm researching all the materials I need to purchase for construcion of EB2.
According to the metric system that is used here in Europe (Poland) the standard electrical wires run as follows : 2.5 mm ; 3.5 ; 4 ++ (mm) , there for : 2.5 is the closest match to the Gauage # 10, this will be used to build (70 cm EB2), unfortunatly to build the EB 2 for 144 mhz , the closest match to Gauage # 12 which is equivalent to (3.264) is wire of dia. 3.5 mm .

I would like to ask if this is too much of a difference in diameter for the antenna work as intented ?

Thank you :)

Phil

Correction to my previous post,

The closes match is Gauage 8 is 4mm not 3.5 mm. and 4 mm is closer to
gauage # 6 . Even larger .

Using larger diameter wire, adjustment would be needed. How much
adjustment? Never looked into using any other diameter wire. So just as
ham radio is experimenting and half the fun, operating is the second
half of the fun.
Make the loops larger than the charts indicate and trim down for best SWR.

rocketeer

With all due respect, I don't believe so.

The bottom of the loops where they are usually attached to a piece of RG-62 for phasing and matching. The tops usually cross each other with just enough gap so they are not electrically connected.

Has anyone used memory pairs, as per the FT817 manual (page 77) for
satellite use?

If so, how did you find it?

Absolutely not, unless you are using insulated wire!!! The loops must be electrically isolated from one another at the top, and only connected at the bottom by the phasing line, not "touching"!

> documented how far below the loops they should be placed, also the
> reflectors "touch" each other at the mast, much like a "ground plane" on a

With the reflector elements, I don't think it matters whether they are connected to each other or not.

AMSAT NEWS SERVICE
ANS-212

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:

ans-editor@amsat.org

In this edition:

SB SAT @ AMSAT $ANS-212.01
ARISS Status July 25, 2005

AMSAT News Service Bulletin 212.01
From AMSAT HQ SILVER SPRING, MD.
July 31, 2005
To All RADIO AMATEURS
BID: $ANS-212.01

1. NES Teacher Workshop

A NASA Explorer School (NES) Satellite Communication Class was held at Goddard Space Flight Center July 18 - 22. The ARISS team introduced Amateur Radio and the ARISS program to thirty-five teachers.

A contact was scheduled with the ISS on Wednesday, July 20 at 17:31 UTC. Some of the educators positioned themselves at the NN1SS station located in Building 11 at GSFC, while others from the class were located outside Building 11, at a second station. The combined team participated by asking 15 questions of John Phillips, KE5DRY. The radio stations were set up to

enable both groups to hear all questions and answers. The teachers were very impressed and moved by the event. On July 22, the ARRL website posted the story, "Educators query ISS astronaut via ham radio." See:
http://www.arrl.org/

2. SuitSat Status

The ARISS-Russia team successfully completed a vacuum test on the SuitSat hardware. Integration and testing continue as the team works on the hardware flight certification.

3. ARRL Article on Return to Flight Mission

On July 20, ARRL ran an article on the shuttle STS-114 Return to Flight mission. To view the story, "Shuttle Discovery launch at least a week away," see: http://www.arrl.org/

4. ARISS International Meeting, Guildford, U.K.

Preparations continue for the ARISS International Face-to-Face Meeting which will be held at the University of Surrey in Guildford, U.K. The AMSAT-UK Colloquium will be held Friday, July 29 through Sunday, July 31, and the ARISS meeting will continue on Monday and Tuesday, August 1 - 2. Information on both meetings may be found on the following website:
http://www.uk.amsat.org/Colloquium/default.php

5. ARISS International Teleconference Held

The monthly ARISS International Teleconference was held on Tuesday, July 19. Among the agenda items discussed were plans for the upcoming ARISS International Face to Face Meeting, PCSAT2, and the SuitSat Project.

6. ARRL Article on ISS Ham Repeater Mode

On July 20, the ISS Ham radio system was set up to run in repeater mode. To view the July 21 ARRL article, "Amateur Radio on the International Space Station in repeater mode," see:
http://www.arrl.org/

On Saturday, July 23, a station in Malaysia heard Sergei Krikalev, U5MIR, sign off from a general contact. He then heard the ISS packet beacon, ending the crossband repeater mode.

7. Astronaut Training

ESA French astronaut Leopold Eyharts spent some time last month with Kenneth Ransom, training and preparing for his Technician's license exam. He took and passed the exam this week, enabling him to participate in future ARISS contacts. Eyharts is scheduled as back up for the Expedition 12 crew.

[ANS thanks Carol Jackson, KB3LKI for the above information]

/EX

SB SAT @ AMSAT $ANS-212.02
PCSAT2 Launch

AMSAT News Service Bulletin 212.02
From AMSAT HQ SILVER SPRING, MD.
July 31, 2005
To All RADIO AMATEURS
BID: $ANS-212.02

PCSAT2 was carried into space on Tuesday, July 26 by STS-114. It will not be activated until it is installed on the outside of the ISS on 1 or 3 August during an EVA. After a week or so of on-orbit checkout, and if all goes well, the APRS digipeater will be activated for general use probably by 10 Aug.

But, well equipped ground stations are invited to help us capture early telemetry on the alternate downlink of 437.975 on the first few days of activation. Telemetry will be at 1200 and 9600 baud. For details, see:
http://www.ew.usna.edu/~bruninga/pec/pc2ops.html

There are 2 classes of stations that can help.

1) We ask 1200 baud IGates or SATgates to monitor 437.975 and feed to the normal global APRS system. This will feed the live telemetry page. See:
http://www.pcsat2.info/PCSat2Web/RealTime.jsp

2) 9600 Baud stations to monitor the same 437.975 for the special once-every-3.3 minutes 9600 baud data beacon (54 lines of data). Email your file to PC2@grc.nasa.gov

The UHF downlink is only 1 watt and so it will require a beam to hear it.

Good luck!

[ANS thanks Bob, WB4APR for the above information]

/EX

SB SAT @ AMSAT $ANS-212.03
PCSAT2 Downlink Challenge

AMSAT News Service Bulletin 212.03
From AMSAT HQ SILVER SPRING, MD.
July 31, 2005
To All RADIO AMATEURS
BID: $ANS-212.03

When PCSAT2 is enabled on Monday or Wednesday, (1,3 Aug) we'd like to capture as much of the 1200 baud and 9600 baud telemetry on 437.975 MHz as possible. See the plan on:
http://www.ew.usna.edu/~bruninga/pec/pc2ops.html

1200 baud telemetry is just an occasional packet every 10 or 60 seconds just like PCsat. 1200 baud stations can simply feed their downlinks directly into the global APRS system like normal. These will help update the LIVE PCSAT2 telemetry page by G4DPZ at:
http://www.pcsat2.info/PCSat2Web/RealTime.jsp

1200 baud capture files will not be requested to be emailed unless there is an anomoly and we need some missing data.

9600 baud stations will see the special solar cell experiment data which is used to measure cell degradation over time. We need the first data sets as a

benchmark for future comparisons. Having many ground stations capturing the data will help
assure a complete initial data set.

54 lines of 9600 baud data are transmitted as a beacon group once every 3 minutes 20 seconds consisting of 11 one-second data bursts of 5 lines spaced every 2 seconds. The 5th byte of each line is human readable as a serial number starting with "A" through "Z", then "a" through "z" and then "0", and "1".

The "challenge" is due to the high UHF Doppler and the burst nature. You have to anticipate the Doppler to get a complete set since there is nothing to tune in until it has begun.

Volunteers who want to take on this challenge:

1) Please be sure to set your TNC and PC clock to UTC within a second or so. Be sure time-stamping is ON. Use Hyperterm or ALOGGER or any other capture tool (ALOGGER format is preferred).

2) Use this file name convention with time stamp and your callsign to save the file, and also use the same format for the subject line of the Email.

PC2_YYMMDD_HHMM_CALL.txt

3) Email to PC2@grc.usna.gov

Soon we will have a separate SATGATE server just for collecting this data and a specialized version of ALOGGER which can not only log, but also serve as a simple IGate for feeding your serial port TNC into the SATGATE server.

ALOGGER is available from:
http://www.billdiaz.dynip.com/

TUNING DOPPLER: Remember that at AOS the UHF signal will be as much as 9 KHz high and at LOS will be as much as 9 KHz low. But at these times the doppler is *changing* the least and this is probably the best time to catch a complete file without any tuning glitches.

In the middle of the pass, the Doppler rate of change is the highest and although the signal will be strongest, over the center 2 minutes the doppler will shift as much as 8 KHz! This is why we expect to have to combine files from multiple users to get a complete set.

Computer tuning may not help, since the step-transition during a tuning step may garble a packet?

Also, all of our web pages will be down during this critical time since our entire building will be shut down for long planned electrical power work. Our command station will be operated via an emergency generator and a single long extension cord offering 15 amps. So read these web pages well prior to the event.

Good luck!

[ANS thanks Bob, WB4APR for the above information]

SB SAT @ AMSAT $ANS-212.04
AMSAT Video News Debuts

AMSAT News Service Bulletin 212.04
From AMSAT HQ SILVER SPRING, MD.
July 31, 2005
To All RADIO AMATEURS
BID: $ANS-212.04

The AMSAT web site has added a new feature intended to bring a close-up look at some of the activities of AMSAT. Members and non members alike will now have an opportunity to gain further insight into activities including "Space Day at the Smithsonian", AMSAT activities at Dayton, as well as features from the Annual Meeting and Symposium.

These video packages, delivered in Microsoft Media 9 format, are produced by long time AMSAT member Don Jacob. Don's background with the CBS television network in Los Angeles brings professional skill to this exciting new activity.

The first package available for viewing is on Space Day 2005. More packages have been shot and will be added to the NewsReel page shortly. To take a look, go to amsat.org and select the link on the left "AMSAT Video News".

Suggestions for additional material and general comments will be appreciated.

[ANS thanks Gunther, W8GSM for the above information]

VU2NUD Silent Key

AMSAT News Service Bulletin 212.05

From AMSAT HQ SILVER SPRING, MD.
July 31, 2005
To All RADIO AMATEURS
BID: $ANS-212.05

AMSAT has received word that Mr. Nagesh, VU2NUD, is a silent key.

It was VU2NUD who encouraged William, PE1RAH, the designed of the Dutch transponder on Hamsat to get in touch with the project and work with the Hamsat team.

AMSAT expresses condolences to the Nagesh family.

[ANS thanks William, PE1RAH, for the above information]

Echo Mode Change

AMSAT News Service Bulletin 212.06
From AMSAT HQ SILVER SPRING, MD.
July 31, 2005
To All RADIO AMATEURS
BID: $ANS-212.06

Mike Kingery, KE4AZN, and the Echo Command Team changed the mode of the satellite on 28 July to the High Power FM repeater. This change is to support the Boy Scout National Jamboree, in progress, at Fort AP Hill in Virginia. This event occurs once every 4 years.

AMSAT would appreciate your help in supporting this event by allowing the K2BSA Jamboree station to use AO-51. If we treat this as we try to do on Kids Day, we can maximize the number of Scouts that are able to participate and use our satellite. Reports from the Jamboree indicate that the satellite station is drawing lots of interest from the Scouts.

Please listen for K2BSA anytime the satellite is over Virginia, and allow them to dominate the satellite when they are active.

[ANS thanks Mike, KE4AZN, and the Echo Command Team for the above information]

AMSAT President's Letter, July 2005

AMSAT News Service Bulletin 212.07
From AMSAT HQ SILVER SPRING, MD.
July 31, 2005
To All RADIO AMATEURS
BID: $ANS-212.07

It has been quite a while since I have availed myself of the AMSAT e-mail channels to communicate with AMSAT members and
for that I apologize.

I have been focusing my communications on the Apogee View column and articles written for the AMSAT Journal and I have been encouraging AMSAT officers and Board members to communicate directly so as to distribute the work load and familiarize the membership with all of the members of their leadership team.

AMSAT has sent out ballots for the most contested election in recent memory. A great slate of candidates has been put forth
and only half of them will be elected to the Board so please cast your ballots thoughtfully. This year your vote is very
important.

The May/Jun issue of the AMSAT Journal was delayed because our publisher went out of business unexpectedly but we are back in production now. However we are in need of articles for the July/August issue as well as for the remainder of the year. If you have any story, construction project, activity or anecdote you would like to share contact our Journal editor Ed Long WA4SWJ (journal@amsat.org). Pictures are a great asset to any article, no matter how short, so take your camera to the next event! If you have something interesting but don't feel up to writing the article, that's OK. We are in the process of establishing a corps of "reporters" to write up these articles for you. Also, if you are a good writer and would like to volunteer as a reporter, contact Ed.

AMSAT-NA is hard at work on two projects, P3E and Eagle. Both of these projects are in direct support of AMSAT's strategic plan and vision statements, which call for emphasis on building High Earth Orbit Satellites. As you heard in a recent e-mail from Bob, N4HY there is significant progress on the P3E satellite's 3rd generation Internal Housekeeping Unit (IHU3), the computer brain for P3E and later Eagle.

There has also been progress on the new Software Defined Transponder (SDT) for modes U/V and L/S on Eagle. Lagging a bit, but still progressing, is the design of the C-C Rider C-band transponder for Eagle. Leadership for these projects is coming from Bob McGwier, N4HY and Frank Brickle, AB2KT with support from Tom Clark, W3IWI and Rick Hambly W2GPS. Design sessions are conducted in my lab once a week or so.

We need continuing financial support for these projects and I encourage everyone to donate what they can to AMSAT's general fund or specific projects in the AMSAT store at www.amsat.org or by calling the AMSAT office directly.

The AMSAT Echo satellite, now designated AO-51, is working almost flawlessly. It is the most capable and useful small satellite AMSAT has sponsored in many years. It takes a great deal of work from our software development and operations teams to keep Echo running this well and I thank them very much for their time and dedication.

I would like to reiterate what Robin VE3FRH, out Immediate Past President, said last year. "If you are a member of any AMSAT, please feel completely free to use ECHO, if you are not a member then please join and encourage all users to join. Unfortunately satellites do not 'Grow on Trees' they are not free to launch, but there are quite a few users who feel that it is their right to use what we have provided.

We really don't want to introduce a 'members only' policy to satellite use. For more details of ECHO and its capability call the AMSAT-NA office to order a copy of Gould Smith's ECHO book, also available through AMSAT-UK (call Jim Heck).

AMSAT's support of Amateur Radio on human space flight missions excites the minds of many people through the ARISS program where we connect teachers and students directly to astronauts in space. I went to Goddard Space Flight Center to assist with an ARISS contact for a wide-eyed group of school teachers attending the NASA Explorer School satellite communication class. There were too many teachers to fit in the cramped confines of the ARISS command station so the group was split it two. Three of us took one group outside into a field to work the space station with an HT and an Arrow antenna. Using a separate HT to coordinate with AMSAT VP of Human Spaceflight, Frank Bauer, KA3HDO, in the control room the two groups of teachers got to ask their questions and get answers directly from the astronauts. The HT and Arrow worked perfectly - 100% "armchair copy." When I saw tears on the faces of the teachers and had a chance to pose for pictures and answer questions afterwards I was truly moved. That was very fine day.

I encourage you to contact your AMSAT leadership team directly with your questions and concerns. For best results, use the links and forms provided at:
http://www.amsat.org/amsat-new/AboutAmsat/officers.php.

Rick, W2GPS
AMSAT President

[ANS thanks Rick, W2GPS for the above information]

SB SAT @ AMSAT $ANS-212.09
AO-27 Mode Schedule Program Available

AMSAT News Service Bulletin 212.09
From AMSAT HQ SILVER SPRING, MD.
July 31, 2005
To All RADIO AMATEURS
BID: $ANS-212.09

George, KA3HSW reports his son has finished the AO-27 mode schedule program. It is available for download if you would like to check it out. The program will show you AO-27's current mode, the UTC time of the next mode change, and the mode schedule for the next 24 hours, just as the ao27.org website does. It will also allow you to choose a future date from a calendar, and see the mode schedule for that date.

It is available in two versions: a Windows executable (EXE), or a JAR file which will run on ANY computer with the Java 2 runtime environment installed. The Windows EXE also requires that J2RE be installed: go to www.java.com. The JAR has been tested under Windows 2000 and XP, Suse and Red Hat Linux, and Mac OS9. Just put either file in a folder of your choice, and run it from there.

Please note that the first time you run it, you will get a "File not found" error as it looks for the epoch and schedule data files it needs. Just click "Update Data" under the File menu to retrieve the latest versions of these files from the ao27.org website, and it will run happily ever after.

You may download either version at:
http://home.earthlink.net/~ka3hsw/ao27
or follow the link on the www.ao27.org website to my son's download page.

[ANS thanks George, KA3HSW and his son for the above information]

SB SAT @ AMSAT $ANS-212.11
PCSAT2 On ISS

AMSAT News Service Bulletin 212.11
From AMSAT HQ SILVER SPRING, MD.
July 31, 2005
To All RADIO AMATEURS
BID: $ANS-212.11

Since PCSAT2 is on ISS but will also operate as an autonomous payload sometimes as well, it has interest on both the SAREX and AMSAT-BB mailing lists.

To avoid dual posting, however, we will generally make most postings on the AMSAT-BB that pertain to PCSAT2 operations and only make postings on SAREX when they involve PCSAT2 coordination with manned activities.

Our understanding is that during the deployment of PCSAT2 and initial checkout, that the ARISS system will probably remain in PACKET mode when not otherwise in use since this minimizes the potential for mutual interference.

Deployment is still expected 3 Aug or possibly earlier. After 2 weeks of checkout, user transponders may be activated. See
http://www.ew.usna.edu/~bruninga/pec/pc2ops.html

[ANS thanks Bob, WB4APR for the above information]

/EX

In addition to regular membership, AMSAT offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT Office.

73,

Roger Beep:

How is your partner doing Echo Mike? And, old Leen E. Ere?

Roger, you and your buddies ready to get up to speed, grab the BIG tickets and QSO with Art Bell on 3.840? He comes on around 10:30 PST, are your buddies anxious?

As popular as Art is with the ladies, I imagine the only reason the girls are grabbing their tickets is to chat with him...

Tell him to say hi to Wayne for me when ya chat him up...

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Uplink: 145.850 MHz (67.0 Hz PL tone) (See below for operating
          procedures)
Downlink: 436.795 MHz

There have been unconfirmed reports on the amsat-bb remailer that SO-50 has shifted downlink frequency as much as 5khz up. This both from Europe.

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The
order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10 minute timer.
[09122004]

=====

FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplink: 145.850 145.870 145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

John, N4QWL reports on July 16th, 2005:

Last evening I had a AOS to LOS qso with WI2W. FO-29 came up at 01:17z here in FM07 and I found WI2W and we chatted until 01:33z. The satellite was at 2 degrees elevation when I finally heard him start to crackle a bit. What a great QSO! To think that I watched this bird launch back in 1996 and it is still working so well is a real thrill. I believe I still have the video. I might just look for it and watch it again. Boy do I love this satellite stuff!
Look for you all up there.

Please send the reception reports to lab2 'at' jarl.or.jp.
Please use the subject line: 'FO-29 reception report'.

Mineo, JE9PEL, has an FO-29 satellite telemetry analysis program that will automatically analyze all digital telemetry from the satellite (such as current, voltage and temperature). FO29CWTE is available at:
http://www.ne.jp/asahi/hamradio/je9pel/
[ANS-WSR wishes to thanks John, N4QWL for this week's report]

=====
AO-7 AMSAT OSCAR 7
Catalog number: 07530
Launch Date: November 15, 1974

Status: Semi-operational in sunlight.
Return to active status: June 21,2002

Uplink: 145.850 to 145.950 MHz CW/USB Mode A
            432.125 to 432.175 MHz CW/LSB Mode B
Downlink: 29.400 to 29.500 MHz CW/USB Mode A
            145.975 to 145.925 MHz CW/USB Mode B
Beacon: 29.502 MHz, 145.972 MHz, 435.1 MHz, 2304.1 MHz

Emily, W0EEC has created a website to allow the users of AO-7 to record
contacts, observations and use of the satellite more effectively at:
http://www.emilyshouse.com/experthams/ao7/main.php
This includes the ability to log contacts.

Tim, K3TZ has written a program to decode AO-07 telemetry.
The program can be downloaded at:
http://www.qsl.net/k3tz/files/K3TZ_AO-07_Telemetry_Decoder_0.5.zip

For more AO-7 info:
http://www.amsat.org/amsat/sats/n7hpr/ao7.html

=====
INTERNATIONAL SPACE STATION (ISS) - ARISS
Catalog number: 25544
Launch date: November 20, 1998

Status: Operational
Current Mode: U/V CROSS-BAND REPEATER
Digipeater: Inactive

The current Expedition 11 crew is:
Commander Sergei Krikalev
Flight Engineer John Phillips

Worldwide packet uplink: 145.990 MHz FM

Region 1 voice uplink: 145.200 MHz FM
Region 2/3 voice uplink: 144.490 MHz FM
Worldwide downlink: 145.800 MHz FM

Repeater Uplink: 437.800 MHz FM
Repeater Downlink: 145.800 MHz FM
Doppler Shift is 10 KHz

Russian callsigns: RS0ISS, RZ3DZR
USA callsign: NA1SS
Packet station mailbox callsign: RS0ISS-11
Packet station keyboard callsign: RS0ISS-3
Digipeater callsign: ARISS

This off the ARISS webpage:
< http://www.rac.ca/ariss/oindex.htm#New%20ARISS%20Operations > :
The ARISS program is pleased to announce that the amateur radio equipment aboard the International Space Station is now operating in cross-band repeat mode. We realize that many of you will miss the packet-operating mode. However, cross-band repeat allows further experimentation of the ISS amateur radio system

The downlink for this operating mode remains the same, so listen for the station on 145.80 MHz. The new uplink frequency is 437.80 MHz. All frequencies are subject to Doppler shifting. For further information on working satellites and adjusting for Doppler shift, please review Emily Clark's (W0EEC) excellent presentation on AMSAT's website:
http://www.amsat.org/amsat-new/information/faqs/Intro_sats.pdf

The ISS daily crew schedule can be found at:
http://spaceflight.nasa.gov/station/timelines/
Remember that the crew operates on UTC time. Also, all of the time line is NOT translated from Russian and posted.

NO-44 PCSAT
Catalog number: 26931
Launch Date: September 30, 2001

Status: Non-Operational?????

Uplink/downlink: 145.827 MHz 1200 baud AX.25 AFSK via W3ADO-1
Aux/Uplink: 435.250 MHz 9600 baud via PCSAT-2 (off)
APRS Downlink: 144.390 MHz (Region 2)

PCSat is a 1200-baud APRS digipeater designed for use by stations using hand-held or mobile transceivers. Downlinks feed a central web site at: http://pcsat.aprs.org

The APRS-equipped PCSat was built by midshipmen from the U.S. Naval Academy under the guidance of Bob Bruninga, WB4APR.
[07242005]
=====
CUTE-1
Catalog number: 27844
Launched: June 30,2003

Status: Operational

Uplink: ?
Downlink: 436.8375 CW
              437.4700 1200 FM ax25 or SRLL (ACTIVE only near Japan ?)
Cliff, K7RR reports:
In the latest Weekly Satellite Report, CUTE 1, #27844 is listed as OPERATIONAL?
Indeed it is very operational as a CUBESAT sending CW telemetry on 436.8345 MHz. At the July 7 2005, 23:45:20 pass over the Western USA:
CUTE 1 6B A4 xx 7F D7 66A8 4702 FF FF7C 65
CUTE 1 6C A6 59 80 D9 66A8 4702 FF FE7C B6

The June 30th KEPS were within ten seconds of AOS and LOS. It is an very good object to practice tracking as the orbit and transmitter power are similar to proposed CUBESATS awaiting launch this December. As a check for Doppler correction, the lack of change in tone is an excellent indicator.

CUTE 1 is a Japanese (Tokyo Institute of Technology) one kilogram nanosatellite that was launched by a Rokot rocket from Plesetsk at 14:15 UT on 30 June 2003. It carries a 100 mW beacon at 436.8375 MHz. Initial orbital parameters were period 101.4 min, apogee 831 km, perigee 819 km, and inclination 98.7?.

For further info about CUTE-1 goto:
http://lss.mes.titech.ac.jp/ssp/cubesat/operation/Schedule_e.html

[ANS WSR wishes to thank Cliff, K7RR, for this week's information]

Launched : September 25, 1993

Status: Operational - Not open for Amatuer use

Downlink: 435.075 MHz
435.275 MHz

Uplink: 145.925 MHz

145.975 MHz

Broadcast callsign: POSAT1-11
BBS callsign: POSAT1-12

Amateurs Get "New"FM Satellite

It was announced at the AMSAT-UK International Space Colloquium in Guildford, England by the AMSAT-UK secretary Jim Heck G3WGM that Amateurs will be getting a new FM satellite to use.

PO-28 (POSAT-1) was launched on September 25th 1993. It's primary purpose was for commercial use on frequencies outside the Amateur bands but it also had the capability to operate on the Amateur bands. After prolonged negotiations it has been agreed that the satellite can be switched permanently to the Amateur frequencies.

It is expected that the process to change over the operation of the satellite from Commercial to Amateur use will take a couple of weeks.

PO-28 (POSAT-1) was built at the University of Surrey within a collaborative programme in satellite technology between a consortium of Portuguese academia and Industry (LNETI, EFACEC, OGMA, MARCONI, ALCATEL, IST, UBI & CEDINTEC) and the Univerity of Surrey, managed through Surrey Satellite Technology Ltd.

Uplink Frequencies: 145.925 and 145.975 MHz
Downlink Frequencies: 435.075 and 435.275 MHz

More information of POSAT-1 can be found at:
http://www.ee.surrey.ac.uk/SSC/CSER/UOSAT/missions/posat1.html
http://www.amsat.org/amsat/sats/n7hpr/po28.html

Launch Date: September 26, 1993

Status: Non-operational

Uplink: 145.875 145.900 145.925 145.950 MHz FM (1200-baud)
Downlink: 435.812 MHz SSB
Broadcast Callsign: ITMSAT-11
BBS: ITMSAT-12

Alberto E. Zagni - I2KBD reports on 02/13/05
The spacecraft is in MBL (safe mode) and is trasmitting just 6 channels
of telemetry. Temperatures and voltage are nominal, but there seems to
be a problem with the onboard receiver, refusing to accept commands.
The spacecraft was launched in 1993, thus nearing 12 years in orbit...

Best regards
Alberto E. Zagni - I2KBD
ITAMSAT Mission Director

NO-45 SAPPHIRE
Catalog number: 26932
Launch Date: September 30, 2001

Status: Non-Operational

Downlink: 437.095 MHz 1200 baud AX-25 AFSK
Uplink:   145.945 MHz UI Digipeater
Digi Callsign: KE6QMD

Everyone is  welcome to use the digipeating/APRS features of Sapphire,
callsign KE6QMD, as per the user service agreement located at the following
URL:
http://web.usna.navy.mil/~bruninga/pcsat/contract.txt
[03132005]
=====
AO-49 AATiS OSCAR-49 (SAFIR-M)
Catalog number: 27605
Launch Date: December 20, 2002

Status: Semi-operational.

Uplink 435.275 1200-baud AFSK
Downlink 145.825 9600-baud FSK
(optional voice message)
Broadcast callsign: DP0AIS

AO-49 (SAFIR-M) is a German amateur radio payload onboard the small German
scientific satellite "RUBIN-2".

AO-49 was built by the German amateur radio association "AATiS
e.V." (German
acronym for "Arbeitskreis Amateurfunk und Telekommunikation in der Schule",
which means: 'working group for amateur radio anand telecommunications in
schools'). AO-49 is designed as a "store and broadcast" system for APRS
based messages, dedicated for the use of schools in combination with the
existing WX-Net and planned buoy experiments in Germany.

No transmissions detected since the 1st of February 2003! It appears
AO-49 is not properly aligned to illuminate the solar panels. This
should end soon. Due to its orbit, AO-49 will be in a phase without
eclipses until 13Feb03.

Martin DG8UAU has written a small software program "SAFIR-M Decoder" to
```

allow decoding of the received DATA0 frames. It is available at:
http://amend.gmxhome.de in the section Aktuelles.

Details on AO-49 (SAFIR-M) can be found at:
http://amend.gmxhome.de

Information about AATiS e.V. is available at:
http://www.aatis.de

WSR 212 Part 4 07/31/2005

AMSAT NEWS SERVICE BULLETIN 212.S4 FROM AMSAT HQ
SILVER SPRING, MD, JULY 31,2005
TO ALL RADIO AMATEURS
BID: $ANS-212.S4

THE FOLLOWING SATELLITES ARE NOT IN ORBIT BUT ARE
PROPOSED FOR LAUNCH AT THIS TIME:

UCISAT ?O-??
Catalog number:
Proposed Launch Date: October 31, 2005

Status: Under Construction

Downlink: Submission in Progress
Uplink: Submission in Progress
Callsign: Submission in Progress

This from Matt Bennett, KF6RTB, UCISAT Communications Team Member:

Our website is www.ucisat.net .This is a new website, however, and doesn't have the "Status" section active yet. Because of the growing interest in our project, I'll push our webmaster to create updates (hopefully) on a week-to-week basis. For now, the current status of the mission is as follows:

-Expected Launch Date: October 31st, 2005
-Frequency Allocation: Submission in Progress
-Construction Status: Sub-Assembly
[WSR to thank Matt Bennett, KF6RTB, for this week's report.]
[01302005]
=====
SSETI ?O-??
Catalog Number:
Proposed Launch Date: LATE 2005

Status: AWAITING LAUNCH

Graham, G3VZV reports:

We have now been advised that the revised launch date for SSETI Express and the other satellites on the DMC3 COSMOS launch has been confirmed as September
27th - so please keep those fingers crossed!

SpaceDaily has a report about SSETI at:
http://www.spacedaily.com/news/internet-04zzzu.html

You can find more info about SSETI at:
http://sseti.gte.tuwien.ac.at/WSW4/

Looking at the website for the SSETI Express webcam
http://sseti.gte.tuwien.ac.at/WSW4/webcam.htm

[ANS thanks Graham, G3VZV for the above information]
[07312005]
=====
PCSAT2 ?0-??
Catalog Number:
Proposed Launch Date: August 1, 2005

Status: Onboard International Space Station

Bob, WB4APR reports:
Since PCSAT2 is on ISS but will also operate as an autonomous payload sometimes as well, it has interest on both the SAREX and AMSAT-BB mailing lists.

To avoid dual posting, however, we will generally make most postings on the AMSAT-BB that pertain to PCSAT2 operations and only make postings on SAREX when they involve PCSAT2 coordination with manned activities.

Our understanding is that during the deployment of PCSAT2 and initial checkout, that the ARISS system will probably remain in PACKET mode when not otherwise in use since this minimizes the potential for mutual interference.

Deployment is still expected 3 Aug or possibly earlier. After 2 weeks of checkout, user transponders may be activated. See:
http://www.ew.usna.edu/~bruninga/pec/pc2ops.html

The PCSAT2 mission is intended as an opportunity to augment existing ARISS communications experiments with an external autonomous communications payload. In this regard, it has several potential uses:

* A UI-Digipeater to help ease congestion on the currently shared ARISS PMS (Packet Mail system)

* A PSK-31 transponder for multi-user communications to improve accessibility for schools and ARISS outreach programs.

* An FM Voice repeater for full duplex crew communications to facilitate crew-to-school ARISS contacts.

* Routine Telemetry on the spacecraft systems

For more information and pictures visit the PCSAT2 website at
http://www.ew.usna.edu/~bruninga/pcsat2.html

[ANS thanks Bob, WB4APR for the above information]
[07312005}
=====
PHASE 3E ?O-??
Catalog Number:
Proposed Launch Date: Early 2006

Status: Under Construction

William Leijenaar, PE1RAH reports on July 16th, 2005:

Hi AMSATs,

I always like to inform the AMSATs public about my P3e work, but unfortunatly due to
some reasons there was not much time and nothing much to say...

However, now I am happy to announce that the my MODE-UV transponder design for P3e is ready at the P3e integration place in Marburg (Germany). About 4 weeks ago I was in Marburg before, where the transponder has been checked. Unfortunatly some unsure things were found in the design. The unsure things were about long term stability after many years in space.

At home in The Netherlands, I changed the design with some minor changes to have a secure long term stability. Finally I tested the transponder again and it performed well within the specifications. Again something learned for future transponder designs :o)

Last Wednesday I drove to AMSAT-DL P3e integrations place in Marburg again, and have my transponder again checked. In the beginning it seemed that the 70cm receiver lost 10dB in sensetivity. After some more measurements we find out that it was due to a bad attenuator we used for protection at the input.

Together with Karl Meinzer we looked for any problems, but so far we could see (without HELAPS) all was okay. In the afternoon I went back home again, this time without the MODE-UV.

Now the MODE-UV will get a new home, the home of P3e... :o)
I hope the transponder will work like its elder sister in AO-10, and you all will enjoy it for many years...

It was lots of work to get it this far, but I know it is for a good purpose...

For the latest project status update please visit the AMSAT-DL
P3-E web page:
http://www.amsat-dl.org/p3e/

```
[ANS-WSR wishes to thank William Leijenaar, PE1RAH for this week's report]

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

```
Voice:  301-589-6062
        888-322-6728
FAX:    301-608-3410
```

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/amsat/listserv/menu.html

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satelite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the
memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen,
G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:

In all likelihood it'll improve things on the bands when the whiny old
timers finally give up and go away.

YES! A bunch of us modded and use them on 10.368 GHz. Basically, remove LNB circuit board, drill out waveguide to 0.75 inch, add a chassis mount SMA connector on one side about 1/4 wavelength up from a plug inserted into the back end of the drilled out waveguide. You might want to get on our email list. It's the Northern Lights Radio Society.
  http://www.nlrs.org/

Of course, you'll need something like a 2M all mode rig and a 10 GHz transverter. You can get transverters at http://www.downeastmicrowave.com

I received this from an Italian student, tis out of my area of expertise.
Can some gurus here help him ?

His e-mail address is
damiano.accurso@studio.unibo.it

Thanks RD

"I write to you this mail because I would need your help if possible. I
premise
mine few experience in subject. I'm an Italian student of engineering and
I'm
working on the creation of a ground station in S-band for the university of
Bologna (Forli). it will serve for the microsatellite that we are building
(denominated AlmaSat) and that we will be launched in the future.
My problem is to simultaneously check two radios Icom 910H through Pc, the
first one for UHF/VHF and the second S-band-UHF/UHF.
the programs that I'm using are Orbitron, Wisp dde and ASR for the control
of
the rotor G5500 of the Yaesu.
Is there a program as Wispdde that can check both through Orbitron?
Excuse me for my bad English.
I thank you for your help.
Good-bye Damiano Accurso"

Thanks for the information Scott. Looking at the NLRS site I see a number of dishes being used for 10 GHz. Most being the television receive dish. The dish I have has a radio assembly with an LNB installed that will transmit to the satellite on 14GHz, and receive from a satellite in the 12 GHz band. What I would like to do is to re-work the current radio transmitter circuit to re-tune the output down to the 10GHz band whereas I could have a compact 1 watt transmit receive system. The radio unit also has an up/down/converter that uses between 910MHz and 1400 MHz to tune the output, therefore I could use my current 1.2 GHz radio as the receiver/exciter. I was hoping to find someone that had already attempted to figure out what parts in the Direcway radio transmitter to change to re-tune the frequency. If I can get this off the ground, 1 watt at 10 GHz with the antenna gain of 35dbd I should be able to work just about anyone within sight, as well as keep my coffee warm while on top of the mountain.
Mike

Oh! I think you are saying that you have the system that DirecTV gives you for satellite internet service? If that's the case, it might be fun to see if you can get it to transmit and receive on 10 GHz. Hopefully someone else has experimented and can offer some help. Intriguing!

That's exactly what I have. Hughes calls it a Radio Assembly; the model number is RA6-074 with a P/N 1302009-0001. What little bit on information I have been able to locate about this unit are mainly instruction sheets with very few details. It looks like I'm going to have to do some reverse engineering on the assembly to figure out what it's doing. I'm sure there's a PLL circuit in there somewhere, the only thing is, can the circuit be modified enough to reduce the output frequency by 4 GHz? The more I look into this the more work seems to be involved. I can't believe some other Radio Amateur somewhere hasn't covered this project yet. If I can figure this out, there are a ton of these dishes on the secondary market that are fairly inexpensive. Talk about antenna gain measurement contests, a .75 M offset feed dish running 1 watt. Looking at K0KFC's numbers of 38.5 dbi from the NLRS Aurora 2004 page and doing the math with 1 watt equates to a WOPPING EIRP of 7079.45784 watts. Now that's some serious output power.

I would really like to hear from anyone that has thought about or attempted to modify one of the Hughes Radio Assemblies in the past.

Mike

Do those units put out 1 whole Watt? Does it have that stamped on there
or something? If so, I wouldn't mind getting my hands on whatever they
use for a P.A. I'm running 5mW on 10 GHz into a regular DirecTV (TVRO)
dish. One Watt would give a MUCH better ERP! ;)

I wonder if the active devices in those internet LNBs are like the

little gain blocks most of us are using such as the MAR-1, MAR-2, etc.
If so, it might be only a matter of changing the microstrip lenghts in
the mixer and finding a way to tune the L.O. down 4 GHz as you
say...hmmmmm...The I.F. of the LNB, I think you said, would allow an
I.F. rig operating in the 1.2 GHz band....velly intelesting :)

I'm resending this post. The first one didn't seem to ever make it. If it's a dup, sorry.
Scott,

What information I have been able to find indicates the Units for home applications run at 1-watt output. There are warning stickers on the radio unit stating to stay at least .6 meters away from the radio unit when powered. If one were to have Direcway Service installed the units have to be installed by a certified installer.

Hughes also builds commercial units that run higher power levels; I've seen 1, 2 and 5 watt units in my quest for information. My guess is they use a mini TWT just prior to the waveguide. Hughes Electronics also builds many devices for military applications such as Satcom communications uplinks that run even higher power as well as many different frequency ranges.

You may find this link interesting if you want some real output power.
http://www.paradise.co.uk/collateral/manuals/203205_RevA.pdf#search='14%20ghz%20upconverter'

Maybe if we keep some dialog going in the group others will get interested in our observations and join in. I'm positive there are some very talented individuals out there that have experience in high power microwave applications that could supply some great information.

Scott,
It looks like the heart of the system is a Sanyo SMO 0705V Hybrid MIC Module
http://www.bdent.com/specifications/sanyo/SY110A_e.pdf

Looks like I may be getting a littel closer!

Mike

There have been some periods where other downlinks are in use, or testing is going on, but it is currently up and running on those frequencies. There may be nobody talking, but you should be able to receive the downlink and telemetry. Be aware, that the telemetry just sounds like white noise. Be certain to account for Doppler shift.

Has anyone actually worked  AO-51 ???       its seemingly dead to my ears.
Even when it passes dead overhead its quiet. I drop the squelch off and
listen intently. No beacon ,nothing.  Im listenning on 435.300FM and
435.150FM. Im in Australia,city called Ipswich [nr brisbane]..
Any comments please ??? its supposedly up and running...pj

Name Beacons HF VHF UHF L-Band S-Band C-Band X-Band K-Band APRS Packet Comments

AO-51 (Echo)   Check Schedule

AMSAT-OSCAR 51 (Echo or AO-51)
Analog Uplink: 145.920 MHz FM (PL - 67Hz)
145.880 MHz FM QRP (no PL)
1268.700 MHz FM (PL - 67Hz)
Analog Downlink: 435.300 MHz FM
2401.200 MHz FM
PSK-31 Uplink 28.140 MHz USB
Digital Uplink: 145.860 MHz 9600 bps, AX.25
1268.700 MHz 9600 bps AX.25
Digital Downlink: 435.150 MHz 9600 bps, AX.25
2401.200 MHz 38,400 bps, AX.25
Broadcast Callsign: PECHO-11
BBS Callsign: PECHO-12
Launched June 29, 2004

Status: Operational

AMSAT-OSCAR 51 or Echo as it is more commonly known is a FM satellite carrying 4 VHF receivers, 2 UHF transmitters, a multimode receiver and a 2400MHz transmitter. It can handle voice and FSK data up to 76.8Kbps. Echo was launched into a low, sun-synchronous polar orbit approximately 850 km high. You must transmit a 67Hz PL tone in order to access the Echo voice repeater.

Please note the change in operational phone downlink frequency to 435.300 MHz.

Information from the Amsat NA Website at
http://www.amsat.org/amsat-new/satellites/status.php#Echo

Howdy from Bill K7MT Helena, Mt.

This evening AO-51 goes to 2 meters up and 2.4 ghz down. So for all you folks who are use to 2 meter up 70 cm down please do not all cq on the 2 meter up link unless you can hear the bird on 2.4 GHZ down link !!!!!!!
AO-51 will be in V/S mode for the next 7 days then next Wednsday it will be L/S (1.2 GHZ up and 2.4 Ghz down) for experimental day.

Heard a lot of handhelds on QRP experimental today and nice to hear everyone out their having fun on the satellites.

"The unforgiveable sins this earth must confront and overcome are
 Nationalism, capitalism, and hoarding.  The idea of every nation
 should be forgot, price should be struck from the commons, and
 princes should be seen for the devils they are.  The sins include
 our church, secret societies, and other religions which make of
 the spirit of God a divide."

Last rites declaration of Ioannes Paulus PP. II (Karol Wojtyla)
2nd April 2005

and without an idol; and this prophecy is now fulfilled, as they cannot make a lawful sacrifice out of Jerusalem.

729. Predictions.--It was foretold that, in the time of the Messiah, He should come to establish a new covenant, which should make them forget the escape from Egypt (Jer. 23:5; Is. 43:10); that He should place His law not in externals, but in the heart; that He should put His fear, which had only been from without, in the midst of the heart. Who does not see the Christian law in all this?

730.... That then idolatry would be overthrown; that this Messiah would cast down all idols and bring men into the worship of the true God.

That the temples of the idols would be cast down, and that among all nations and in all places of the earth. He would be offered a pure sacrifice, not of beasts.

That He would be king of the Jews and Gentiles. And we see this king of the Jews and Gentiles oppressed by both, who conspire His death; and ruler of both, destroying the worship of Moses in Jerusalem, which was its centre, where He made His first Church; and also the worship of idols in Rome, the centre of it, where He made His chief Church.

731. Prophecies.--That Jesus Christ will sit on the right hand, till God has subdued His enemie

Last rites declaration of Ioannes Paulus PP. II (Karol Wojtyla)
2nd April 2005

--
truly godly, and most of them lately become so. There are very few houses in the whole town, into which salvation has not lately come, in one or more instances. There are several Negroes, who from what was seen in them then, and what is discernible in them since, appear to have been truly born again in the late remarkable season.

God has also seemed to have gone out of His usual way, in the quickness of His work, and the swift progress His Spirit has made in His operations on the hearts of many. It is wonderful that persons should be so suddenly and yet so greatly changed. Many have been taken from a loose and careless way of living, and seized with strong convictions of their guilt and misery, and in a very little time old things have passed away, and all things have become new with them.

God's work has also appeared very extraordinary in the degrees of His influences; in the degrees both of awakening and conviction, and also of saving light, love, and joy, that many have experienced. It has also been very extraordinary in the extent of it, and its being so swiftly propagated from town to town. In former times of the pouring out of the Spirit of God on this town, though in some of them it was very remarkable, it reached no further then; the neighboring towns all around continued unmoved.

This work seemed to be at its greatest height in this town in the former part of the spring, in March and April. At that time God's work in the conversion of souls was carried on amongst us in so wonderful a manner, that, so far as I can judge, it appears to have been at the rate at least of four persons in a day; or near thirty in a week, take one with another, for five or six weeks together. When God in so remarkable a manner took the work into His own hands, there was as much done in a day or two, as at ordinary times, with all endeavors that men can use, and with such a blessing as we commonly have, is done in a year.

I am very sensible, how apt m

From my (very sporadic) listening log:

"2005-03-02 1523 29352kHz... single repeated tone ~3s long with chirp and doppler shift"

At the time I attributed it to RS-15, and still do. Happy listening!

What's the source of this sound ?

http://www.humanity.free-online.co.uk/strange-radio-sound-sw-12point9-mhz.mp3

sounds like:

http://www-pw.physics.uiowa.edu/space-audio/vgr-helio.html

but is it ? And that was received by Voyager, can it be received
on earth ?

Any confirmation appreciated :-)

barney

This sound is a digital signal modulated on a multicarrier phase shift keying.
Nothing supernatural or ET about it.
Near the stat you can hear a carrier being swept accross.

Hi,

I had an FT-817 that I had used for LEO use, awhile back, but due to its size, and lack of use I sold it off.

I am now looking for an HT to carry with me to use with an Arrow beam. Some of the ones I have focused on would be the Yaesu VX-5 or VX-7, and in the Kenwood TH-D7 or the TH-F6.

Does anyone have some experiance with any of these, and what may be the better choice.

thanks James KG4PBI

When I bought my FT-817 last year, the manual described a setup of five channels that allowed operation through one of the OSCAR satellites. There was an input and output based on the satellite's movement and doppler effect and a user could follow the satellite by changing the channel as it passed overhead. I was informed that the satellite described was dead so I never used it.

I now have a dual-band HT and would like to know if there are any satellites that can be programmed into it in a similar manner.

Thank you,

Buck

Thankyou Octa Ex ! :-)

How do you know this ?

Why does it appear in various places on the Spectrum ?

What do you think to this analysis ? :

http://communities.anomalies.net/cgi-bin/bbs/ultimatebb.cgi?ubb=get_topic;f=
25;t=007424

> Nothing supernatural or ET about it.

I did'nt say that !

But if it is 'earthbound' then why does the Voyager signal sound
similiar ?

> Near the stat you can hear a carrier being swept accross.
```

Wow. I thought that was natural 'drift'.

Hi Barney and the group.

This is a transmission from a STANAG 4285 transmitter used by NATO
countries,it can be heard all over the spectrum.
Further information and sound samples can be found here:

Since the VX-5 and VX-7 are both incapable of full duplex they should be off the list. Half duplex operation on the LEO satellites is a source of major QRM and (IMHO) shouldn't be allowed.
I have a TH-D7 and an arrow antenna with diplexer that I've used many times on SO-50, AO-51, and AO-27. Since this HT also supports APRS operation, it's ideal hiking and biking.
I recommend a VOX head set for hands free operation (keeping the antenna aimed at the satellite and downlink VFO on frequency pretty much uses up all your free hands).
Steve

I have some questions about the reception of polar HRPT (1600Mhz). The AOR discone antennas DA-5000 and DA-753G can they be used to receive these signals? And would it also be possible to receive the GEO-sats (with a suitable receiver)?
The big advantage for me is that you don't have to follow the satellite's orbit. Or is there a big difference in the reception quality? I've found a lot of info on the net, but what's possible on one site, isn't possible according to another one.

I'm currently receiving APT images with a Diamond discone and an PCR-1000, I'm pleased with the results (after a lot of minor software adjustments) but I'm thinking of upgrading my equipment.......all suggestions welcome.

Thank you.

I would be interested in what software you might be using for the PCR-1000.
Anyone with experience using Bonito 5.2 (also called RadioCom 5)? I have a
factory fresh copy ($241) along with a new PCR-1000 both still in their boxes
and just wondering if it is worth my time setting it up or just disposing of it.

I'm using a Diamond discone D-130 antenna (with max 10meter quality cable, such as
aircell) but an antenna more specific for APT reception would be much better.

With the program Orbitron (to predict satellite passes, with DDE option) and WXsat to decode the signals. I'm experimenting with WXtoIMG but I find this more difficult to setup. You can also fine-tune the pcr with factory software (EX-2099), but it can wreck your receiver......make sure that you've got a backup copy of your EEPROM before experimenting (unique settings for each receiver). It takes a signal generator, millivoltmeter and oscilloscope to fine-tune the pcr.

Pcr control with icom software, but I've read that Bonito is better because it has an built-in DSP filter.
I didn't test the bonito because I'm not spending that amount on software, I'd rather invest it in equipment.
So in your case I think it's worth the installation. You could also try the free pcrtalk program.

I'm not using an amplifier because it increases weak signals, but it also increases the
noise in strong signals. Noaa signals are strong enough to recieve them without one.
The optional DSP unit for the pcr only has advantage in the lower frequencies.

After a lot of patience, testing and adjusting my results are very good, sometimes I've got a very good signal, starting at a 10 degree angle.

Howdy Buck,

Bill K7MT in Helena, Mt. Look at

http://www.amsat.org

Satellite status and look at SO-50 and AO-51 the two operational FM birds.
FO-29 is the best SSB satellite at this time. Enjoy.

Bill K7MT AMSAT 33461

Agree on the TH-D7 HT, it can also send APRS to the ISS digipeater and
possibly the PCSAT2 that will go up on the Shuttle Discovery and
installed on one of the solar "arms" of ISS.
See: http://www.ew.usna.edu/~bruninga/pcsat2.html

Jim, these were the replies you got last time.

From George KA3HSW

It did not work because XP does not use the autoexec.bat file at startup....
you need to right-click your "My Computer" icon, choose the Advanced tab,
then click the Environment Variables button. In the lower half of the window, below the System Variables box, click the New button, and then type
in "set" (no quotes) for the variable name, and "tz=EST5EDT" (again, no quotes) for the variable value, and click OK to save.

I believe you tried this and still had problems.

George then sent this.

Strange...... well, a guaranteed way to get IT into the right time zone is
to go into the IT.INI file and make sure that the PST line is commented out,
and (for you) the EST line is uncommented. I can't recall whether this method overrides the environment variable or vice versa, but I just checked

```
on my system and I have both the environment variable and the .INI file
set
correctly for my TZ (CST) and IT works fine.
 >

I also responded with the following which worked for me.
 >
I had to dig out my old copy of IT to try this and found that the file
you need to put the SET command in is in the windows directory:
C:\Windows\system32\autoexec.nt
Open autoexec.nt with notepad to edit, works fine for me in the uk with
a setting of GMT0. I haven't used IT for years my copy is dated 1989
but still works well in XP.

Les, it worked !!!!!!!!   I just got your message, and did the change (I
am not that pc skilled), and it works great the first time !!

I had pretty well given up, and had not used Instantrack since I posted my
question.

Thank you very much !!!!

I agree, the TH-D7a is probably the best radio all around for sat ops. The only other one that you might consider is the Icom W32a

Matt Giwer <matt@tampabay.REMover.rr.com> wrote:

> It is feasable if the combination of 1 and 2 do not result in more than about 1/36th wavelength

That's about 6 times better than the requirements for dishes [A]. I don't know where you got that figure from, but it is wrong.

> error. The more it deviates from that the less useful. 1/36th would cover about a 10 degree circle

Er! 1/36th in the beam direction would cause a deviation of the order of (in radians) 1/(36 * <baseline length in wavelengths>) in the direction of the individual fringes. The direction in which the fringes are intended to coincide would only see a small reduction in in-phase signal.

Whilst I strongly suspect that differential and carrier phase will not solve the problem, it is nothing like as bad as you suggest.

> in the sky. And that would indicate the array gain, roughly log(180^2/10^2). At 1/4 wavelength error

If the peak to peak error is 1/4 wave, in the worst possible configuration, the array gain will be degraded by 3dB.

[A] Generally the profile accuracy suggested for dishes is 1/10th to 1/12th of a wavelength, but the phase error is doubled by the reflection.

A dish is summing power. You don't care much. It could be less if the receiver at the focal point were larger but at some point the receiver blocks too much incoming signal.

In a distributed array you must have phase information so you can determine the direction it is pointing. If we assume these dishes are all pointing with zero error at the satellite 32,000 miles up from all over the US (for example) they are all pointing at a different point at infinity. So if you want to look at a point at astronomical distances you have to correct for the satellite aim point.

Consider a dozen widely spaced antenna pointed at the same satellite. They go on to point to widely different points in space as they "pass through" the satellite. That gives you no gain at all, it does not not improve the signal to noise ratio.

To take the data from all of them and sum the data from one point in the sky, Tau Ceti the odds on favorie, you have to phase shift the data from all of them such that you are only considering the part of the signal that corresponds to that direction.

Because television sensors all converge on a very local point 32,000 miles away (36,000 mile orbit from the center and varying by latitude) the "aim point" rapidly diverges beyond the satellite. To recombine that noise into useful data you have to know how to "point" it to a single direction to combine signal to exceed the noise.

Given the reality that only the dishes in a very small town can be considered to be pointing to roughly the same point in deep space there is no gain of interest as the smaller the town the smaller the deep space area and the lesser the gain.

Two dishes one mile apart exactly pointing to the same point 32,000 miles up point to greatly different places in deep space.

This is a good start. Is it affordable to calibrate every installation? These sites are by definition on houses and such and installed by people who know only how to do that. So each has to be properly calibrated.

BUT the transmission of the data back to the processing source has to be perfect. It cannot be by raw cable as that would require a separate network and if it existed people would use cable for TV not satellites. It has to be processed data going back and then we have local computers and data packets and delays all piling up. Most of those can be overcome. Even if there were raw data fibers going back to the processor, the length of the fiber path has to be known exactly to preserve phase

information.

Mathematically (and because of the linearity of EM fields with respect to superimposition, dishes sum field (volts/metre) not power. In fact dishes can be treated as the limiting case of phased arrays, with infinitesimal elements (and free space phasing lines); that's how you work out the beam pattern to get the approximate gaussian (the actual one for a circular aperture is, I believe, a Bessel function). Using analogue delay lines for phasing is standard for stacked arrays and, with switchable loops, even for some electronically steerable ones. (Dishes do combine power overall, but so do delay line phased arrays, and you can only work out beam patterns by considering the phased integration of the fields.)

However, one doesn't need to think about dishes to demonstrate that even quarter wave peak to peak along the beam direction only compromises by 3dB. (Perpendicular to the beam, there is no effect.)

The worst case configuration is with half exactly an eighth wave high and half an eighth wave low. The in-phase components follow a cosine pattern and are + and - 45 degrees. Cos (45 degrees) is sqrt (2). The out of phase components follow a sine pattern and cancel. Squaring to get power, one gets a factor of 2, i.e. 3dB. Note that I haven't made any assumptions about the array size, here, except that the individual element capture areas don't overlap.

Whilst I have severe doubts as to the ability to phase to even this accuracy, it is 9 times coarser than the 1/36th you were claiming, and has only halved the effective number of elements.

This kit is unbuilt. Still in the original box. It will point your antennas to automatically track a satellite selected from it's internal database. It is a standalone unit after it is configured with a pc. Check it out at:

Correct. Sonar background myself. Never did quite learn to think in E-M terms for posting purposes.

And again correct. I was thinking in terms of a linear sensor array not an area sensor array. Area would proportional to the square the linear accuracy required in the lesser direction. My error was a hangover from my earliest work.

Regret the delay in responding.

Might it be that we are talking about two different correlations..?

I was talking about a simple phase-correlator : accumulate signals
from all elements. In hardware, that is done with 'phase-splitters'.
(At least that's how I hooked my 4 loop-yagi's together back in the old days).
Antenna phase-splitters are passive devices which simply 'add' the electrical
field of multiple feed-points (or split them if you are transmitting).

For a (digitally sampled) antenna signal, these would be simply be 'adders'
which need to 'add' the signal value for each element for each sample.

For one beam, for 10Ghz sample rate (5 GHz bandwidth), and N elements,
you would need to do 10*10^9 * N additions per second (pretty large
amount of digital adders), but it is linear w.r.t. N.

I think you might have been talking about a smarter technique to do this work.

Potentially.  Your comment about a "tree" perhaps should have clued me in.
```

RD> I was talking about a simple phase-correlator : accumulate signals
RD> from all elements. In hardware, that is done with
RD> 'phase-splitters'. (At least that's how I hooked my 4 loop-yagi's
RD> together back in the old days).

I'd call that a beam former.

The Very Large Array (and other interferometers of its ilk) work by combining the signals from all unique pairs of antennas. Specifically, one takes the signals from antennas #1 and #2, multiples them together, and then integrates for a short time. That's the measured quantity, often called a "visibility" or "correlation coefficient." One then repeats this for antennas #1 and #3, antennas #1 and #4, #1 and #5, #1 and #6, ..., until one has made all unique combinations from 27 antennas. (Those who enjoy math problems can try to figure out how many such combinations there are. :)

To make it even more complicated, some of the designs for the Square Kilometer Array (and the Low Frequency Array and the Long Wavelength Array and others) contemplate using both beam formers and correlators. Thus, one would start with a bunch of dipoles. The signals from a "small" number of dipoles (e.g., 100) would be combined in the manner you described. This produces a signal typically called a "station" beam or "pod" beam. The signals from various stations (numbering perhaps 100) are then combined by a correlator.

Hi all I am helping a friend promote a web site. You see a childhood friend of hers lost her husband at the World Trade Center on Sept. 11, 2001. She has run into some hard times and my freind wants to help her. So she came up with the idea to market Just say NO to Bin Ladin dartboards and punching bag covers. Not only is she going to donate part of the proceeds to her freind but an additional part of the proceeds will go to the Firemans Fund. If you could take the time to check out the web site it would be much appreciated!! The web site addy is:

http://www.angelonmyshoulder.4t.com

Thanks so much everyone!!

Another possible problem is that I'm not even sure the receivers that come with the satellite dishes can even detect frequencies other than the 12 Ghz the satellites broadcast at.

In regard to the wavelengths that the .5 m antennas could usefully collect, I've seen references that a dipole antenna should be a quarter of the wavelength. Is this different for parabolic antennas?

I'm thinking perhaps you could simply attach flat metal dipoles to the surface of the .5 meter antennas so they could collect megahertz frequencies. Then at a quarter wavelength you could collect down to 2 meter wavelengths or 150 Mhz.

While we're at it, the thought of using dipoles, like TV antennas, raises another possibility. You need receivers for these frequencies. Where could we get large numbers of receivers already existing at these frequencies? Inside TV's! Assuming we could solve the problem of tranmitting the data to a central site (ultra wideband, broadband over power-lines, amateur packet radio, etc.), we could have all new TV's come installed with a circuit that transmits received signals to the central site. The number of new TV's sold yearly worldwidde is 90 million. This would result in markedly larger numbers of possible receivers even above the satellite TV approach.

There might be privacy issues with this idea however.

> As I stated below the primary extra components to be added to the DirecTV dishes to be used for radio astronomy are the feedhorn and the preamp. The feedhorn is simply a metal pipe of little cost. The SetiLeague site lists sellers of specially made preamps for SETI search at $150. But these are handmade. From the low number of circuit elements, I estimate that if mass produced at the millions of items level the price could come down in the range of $10 each.

> preamp could be attached at manufacture would not cost more on installation labor. The installation is already paid for by the satellite TV subscribers. To pay for the extra cost for the added equipment you could simply add $1 extra per month to the subscriber rate. Then these 4 million, .5 meter wide dishes would have a total collecting area of a disk 2000 x .5 m = 1000m = 1km wide, the total collecting area expected for the SKA. Moreover this would have the advantage that an additional square kilometer of collecting area would automatically be added every year over several years going by the present growth rate.
>
> You could also attach the extra equipment to the 25 million satellite systems already installed in perhaps 4 or 5 years. The number of satellite TV subscribers worldwide was 60 million in 2003 and is expected to grow to 100 million by 2008:

The rule of thumb is that the dish should be more than about 6 wavelengths across, or diffraction starts to become really important. Thus, for instance, the VLA (25 meter diameter), when operated at 74 MHz (4 meter wavelength), is right on the hairy edge.
